

CHARGING METHOD, MOBILE DEVICE, CHARGING DEVICE, AND CHARGING SYSTEM

ABSTRACT

Embodiments of the present invention relate to a charging method, a mobile
5 device, and a charging device. The mobile device includes a battery and a connector,
where the connector includes a charging pin and a ground pin; and when the charging
pin establishes a connection to an output pin of the charging device by using a
charging cable or a battery charging stand, the charging pin receives a first current
signal transmitted by the output pin of the charging device, and transmits the first
10 current signal to an anode pin of a battery, so as to charge the battery.
