METHOD FOR SCALING IMAGES FOR USAGE ON A MOBILE COMMUNICATION DEVICE

ABSTRACT

A process is set forth for scaling images recieved as email attachments, or accesible by a URL link, to fit the device screen of a mobile communication device. A user menu prompt is presented for allowing the user to save the image for subsequent reuse by other device applications such as screensavers, background image useage, or picture viewers, without these device applications having to synchronize with a desktop computer to obtain the image.
