ABSTRACT

COATED PAPER POSSESSING A SILKY FEEL

The present invention relates to a coating composition for coated papers intended to be printed in offset, characterized in that the coating pigments are polyurethane microbeads having a size of less than 10 micrometers and advantageously of approximately 7 micrometers.

It also relates to a paper having a silky feel, comprising at least one face coated with said coating composition and advantageously these two faces.

This paper is also characterized in that it can be printed in offset with low, indeed even nonexistent, setting-off and chalking.
