(54) Title: NON-FUNGIBLE TOKENS FOR PAYMENT INSTRUMENTS

FIG. 1

(57) Abstract: Disclosed are various embodiments for providing non-fungible tokens (NFT) as a mechanism for verifying ownership of payment instruments such as stored value payment instruments. First, a computing device can receive a purchase notification, the purchase notification indicating that a first user has purchased a stored value payment instrument. Then, the computing device can create a non-fungible token (NFT) on a distributed data store in response to receipt of the purchase notification. Next, the computing device can associate a unique identifier of the NFT with the stored value payment instrument. Subsequently, the computing device can receive a first public key associated with the first user. Then, the computing device can update an owner identifier of the NFT with the first public key associated with the first user.
