

ABSTRACT
(Figure 2)

Apparatus and method for programming a projectile

A measurement apparatus (10, 10') is proposed, which is included on a measurement and programming basis for a projectile (13), which detects the fields and/or signals which emerge/originate from a programming coil (27), and is electrically connected to an evaluation device (11) which itself evaluates these detected values. In special cases, these values can then be taken into account for the programming of the projectile (13).
