- (54) **Title:** OUTLET VALVE FOR A CONTAINER

FIG. 10

- (57) **Abstract:** There is described an outlet valve (20) for a container, for example a bioreactor container. The outlet valve comprises a membrane (22) and the outlet valve is attachable to a wall of the container such that the membrane is arranged to face an internal volume of the container. The outlet valve further comprises an actuator operable to move membrane from: a first position in which the membrane is substantially in a plane of the wall of the container, to a second position in which a part of the membrane is displaced from the plane of the wall of the container such that the membrane is frustum-shaped.
