

ABSTRACT

VALVE DEVICE

5 A drain trap 1 includes: a casing 10 having a fluid channel; and a second valve mechanism 40 including a second valve seat 52 having a seat surface 52a in a ring shape and a second valve body 42 configured to be displaced to be separated from and seated on the seat surface 52a of the second valve seat 52 so that and the second valve mechanism 40 opens and closes the channel. The second valve seat 52 is held to be movable back and
10 forth along a center axis X of the ring shape such that the seat surface 52a of the second valve seat 52 and the seat surface 42a of the second valve body 42 are separated from each other and contact each other, and is held to be rotatable about the center axis X of the ring shape.
