

ABSTRACT

A method for playing a modified Baccarat card game includes providing a gaming table or electronic gaming system (including via the internet) having a side bet wager spot for receiving a Bigger Win side bet that either the player hand or the banker hand will have a higher point value based on a scoring system different from the rules of a standard Baccarat game, having other side bet options such as Win Both side bet and In-Between side bet, receiving one or more Variable Value Tokens from a gambler, the Variable Value Tokens having an initial face value that is more than the initial cost that was paid by the gambler, determining whether the wager placed in the stage of receiving is a winning wager in the Baccarat game and on the Bigger Win side bet and other side bets (if any), and dispensing a payout.
