

ABSTRACT

CARTRIDGE, ATTACHMENT AND MOUNTING KIT

5 To further develop a drive transmission method from a main assembly of an apparatus toward a cartridge.

 The cartridge is detachably mountable to a main assembly of an image forming apparatus including a drive output member configured to output a driving force, and a main assembly side pushing member configured to incline
10 the drive output member by pushing the drive output member. The cartridge includes a photosensitive drum and a cartridge side pushing member. The cartridge side pushing member is configured such that an inclination angle of the drive output member is changed by pushing the main assembly side pushing member.
