

ACYLAMINOCYCLOALKYL COMPOUNDS SUITABLE FOR TREATING DISORDERS THAT
RESPOND TO MODULATION OF DOPAMINE D3 RECEPTOR

Background Of The Invention

5

The present invention relates to novel acylaminocycloalkyl compounds, in particular to the compounds of the formula I as described herein. The compounds possess valuable therapeutic properties and are suitable, in particular, for treating diseases that respond to modulation of the dopamine D3 receptor.

10 Neurons obtain their information by way of G protein-coupled receptors, *inter alia*. A large number of substances exert their effect by way of these receptors. One of them is dopamine. Confirmed findings exist with regard to the presence of dopamine and its physiological function as a neurotransmitter. Disorders in the dopaminergic transmitter system result in diseases of the central nervous system which include, for
15 example, schizophrenia, bipolar disorders, depression, Parkinson's disease, disorders associated with drug abuse. These diseases, and others, are treated with drugs which interact with the dopamine receptors.

Up until 1990, two subtypes of dopamine receptor had been clearly defined pharmacologically, termed D1 and D2 receptors. More recently, a third subtype was
20 found, namely, the D3 receptor which appears to mediate some effects of antipsychotics and antiparkinsonian drugs (J.C. Schwartz *et al.*, "The Dopamine D₃ Receptor as a Target for Antipsychotics" in Novel Antipsychotic Drugs, H.Y. Meltzer, ed., Raven Press, New York 1992, pages 135-144; M. Dooley *et al.*, *Drugs and Aging* 1998, 12:495-514; J.N. Joyce, *Pharmacology and Therapeutics* 2001, 90:231-59, "The
25 Dopamine D3 Receptor as a Therapeutic Target for Antipsychotic and Antiparkinsonian Drugs"). Since then, the dopamine receptors have been divided into two families. On the one hand, there is the D2 group, consisting of D2, D3 and D4 receptors, and, on the other hand, the D1 group, consisting of D1 and D5 receptors.

Whereas D1 and D2 receptors are widely distributed, D3 receptors appear to be
30 expressed regioselectively. Thus, these receptors are preferentially to be found in the limbic system and the projection regions of the mesolimbic dopamine system, especially

in the nucleus accumbens, but also in other regions, such as the amygdala. Because of this comparatively regioselective expression, D3 receptors are regarded as being a target having few side-effects and it is assumed that while a selective D3 ligand would have the properties of known antipsychotics, it would not have their dopamine D2 receptor-mediated neurological side-effects (P. Sokoloff *et al.*, *Arzneim. Forsch./Drug Res.* 42(1):224 (1992), "Localization and Function of the D₃ Dopamine Receptor"; P. Sokoloff *et al.*, *Nature*, 347:146 (1990), "Molecular Cloning and Characterization of a Novel Dopamine Receptor (D3) as a Target for Neuroleptics").

Selective Dopamine D3 receptor ligands have been suggested for the treatment of Parkinson's disease, schizophrenia, depression, motivation disturbances (amotivation) (see J. N. Joyce, *Pharmacology and Therapeutics* 90, 2001, 231-259; B. Levant, *CNS Drugs* 1999, 12, 391), for the treatment cognitive dysfunction, in particular cognitive dysfunction associated with schizophrenia or dementia (see J. Laszy *et al.*, *Psychopharmacology*, 2005, 179, 567-575), for the treatment of disturbances associated with substance abuse, i.e. for the treatment of drug addiction or drug dependence (see J.N. Joyce, *loc. cit.* and C. A. Heidbreder, *Brain Research Reviews* 49, 2005, 77-105), for the treatment of anxiety (see Z. Rogoz *et al.*, *Polish Journal of Pharmacology*, 2003, 55, 449-454), for the treatment of pain (see Levant *et al.*, *Neurosci. Lett.* 2001, 303, 9), for the treatment of renal function disorders (see B. Mühlbauer, E. Küster, G. Luippold, *Acta Physiologica Scandinavica*, 2000, 168 (1), 219-223) and for the treatment of eating disorders (see S.C. Benoit, J. A. McQuade, D. J. Clegg, M. Xu, P.A. Rushing, S.C. Woods, R.J. Seeley, J. Randy, *Behavioral Neuroscience*, 2003, 117(1), 46-54).

WO 2006/082456 describes cyclohexylamides, which are Dopamine D3, D2 and 5HT1A antagonists. The cycloalkyl moiety of the compounds of WO 2006/082456 carries an alkylene-N-piperazinyl radical, where the other nitrogen carries a phenyl radical having a fused saturated carbocyclic radical.

Similar compounds are also known from WO 2007/148208, where the fused carbobicyclic radical is replaced by unsubstituted or substituted aryl or hetaryl and where the acyl group requires to be substituted.

Similar compounds are also known from US2009/143398, where the carbobicyclic radical is replaced by a 5,6-dichloro-2-amino-4-pyrimidyl radical.

Similar compounds are also known from WO 2011/161009 and WO 2012/004206, where the carbobicyclic radical is replaced by a 5,6-disubstituted 2-pyridyl radical having a fused heterocycle.

Compounds having a heteroaromatic ring, which is bound via a linker to a piperazine radical carrying a 1-(4-pyrimidinyl)-piperazinyl radical receptor have been described previously in WO 2004/080981, WO2004/108706, WO 2005/118558, WO 2005/118571, WO 2006/015842 and WO 2009/056625. The compounds possess high affinities for the dopamine D₃ receptor, and have therefore been proposed as being suitable for treating diseases of the central nervous system.

Although some of the compounds of prior art are known to have high affinities for the Dopamine D₃ receptor of less than 10 nM, there is still an ongoing need for compounds which selectively bind to the Dopamine D₃ receptor. In particular, there is an ongoing need for compounds which have one of the following characteristics:

- i. Selective binding to the Dopamine D₃ receptor, in particular vis-à-vis binding to the Dopamine D₂ receptor, adrenergic receptors such as alpha-1 or alpha-2 receptors or serotonin type receptors such as serotonergic 5HT₁ and 5HT₂ receptors;
- ii. metabolic stability, in particular microsomal stability, e.g. measured in vitro, in liver microsomes from various species (e.g. rat or human) in human cells, such as hepatocytes;
- iii. no or only low inhibition of cytochrome P450 (CYP) enzymes: cytochrome P450 (CYP) is the name for a superfamily of heme proteins having enzymatic activity (oxidase). They are also particularly important for the degradation (metabolism) of foreign substances such as drugs or xenobiotics in mammalian organisms. The principal representatives of the types and subtypes of CYP in the human body are: CYP 1A2, CYP 2C9, CYP 2D6 and CYP 3A4. If CYP 3A4 inhibitors (e.g. grapefruit juice, cimetidine, erythromycin) are used at the same time as medicinal substances which are degraded by this enzyme system and thus compete for the same binding site on the enzyme, the degradation thereof may be slowed down and thus effects and side effects of the administered medicinal substance may be undesirably enhanced;

- iv. a suitable solubility in water (in mg/ml);
- v. suitable pharmacokinetics (time course of the concentration of the compound of the invention in plasma or in tissue, for example brain). The pharmacokinetics can be described by the following parameters: half-life, volume of distribution (in $\text{l}\cdot\text{kg}^{-1}$), plasma clearance (in $\text{l}\cdot\text{h}^{-1}\cdot\text{kg}^{-1}$), AUC (area under the curve, area under the concentration-time curve (in $\text{ng}\cdot\text{h}\cdot\text{l}^{-1}$), oral bioavailability, (the dose-normalized ratio of AUC after oral administration and AUC after intravenous administration), the so-called brain-plasma ratio (the ratio of AUC in brain tissue and AUC in plasma);
- vi. no or only low blockade of the hERG channel: compounds which block the hERG channel may cause a prolongation of the QT interval and thus lead to serious disturbances of cardiac rhythm (for example so-called "torsade de pointes"). The potential of compounds to block the hERG channel can be determined by means of the displacement assay with radiolabelled dofetilide which is described in the literature (G. J. Diaz et al., Journal of Pharmacological and Toxicological Methods, 50 (2004), 187-199). A smaller IC₅₀ in this dofetilide assay means a greater probability of potent hERG blockade. In addition, the blockade of the hERG channel can be measured by electrophysiological experiments on cells which have been transfected with the hERG channel, by so-called whole-cell patch clamping (G. J. Diaz et al., Journal of Pharmacological and Toxicological Methods, 50 (2004), 187-199);
- vii. high free fraction in brain, i.e. the fraction of the compound bound to proteins should be low;
- viii. low lipophilicity.

Brief Description of the Invention

In one aspect, there is provided a compound of the formula I

where

m is 1 or 2,

n is 1 or 2,

5 A is selected from the group consisting of CH₂, CH₂CH₂, CHFCH₂ and CF₂CH₂,

R¹ is hydrogen or C₁-C₃-alkyl,

R² is selected from the group consisting of hydrogen and fluorine,

R^{3a} is selected from the group consisting of hydrogen and methyl,

10 R^{3b} is selected from the group consisting of hydrogen and methyl,

R⁴ is branched C₄-C₆ alkyl or branched fluorinated C₄-C₆ alkyl, and

R⁵ is an oxygen containing radical selected from the group consisting of C₁-C₂-alkoxy-C₁-C₄-alkyl, fluorinated C₁-C₂-alkoxy-C₁-C₄-alkyl, hydroxy-C₁-C₄-alkyl, fluorinated hydroxy-C₁-C₄-alkyl, oxetanyl, fluorinated oxetanyl, oxo-

15 lanyl, fluorinated oxolanyl,

C₃-C₅ cycloalkyl, fluorinated C₃-C₅ cycloalkyl, where the cycloalkyl moiety in the last two mentioned radicals carries 1 or 2 radicals selected from

hydroxyl, C₁-C₂-alkoxy and fluorinated C₁-C₂-alkoxy and may additionally carry 1 or 2 radicals selected from C₁-C₂-alkyl and fluorinated C₁-C₂-alkyl,

20 C₃-C₅ cycloalkoxy-C₁-C₄-alkyl and fluorinated C₃-C₅ cycloalkoxy-C₁-C₄-alkyl, where the cycloalkoxy moiety in the last two mentioned radicals may carry 1 or 2 radicals selected from hydroxyl, C₁-C₂-alkoxy, fluorinated C₁-C₂-alkoxy, C₁-C₂-alkyl and fluorinated C₁-C₂-alkyl,

the N-oxides, the prodrugs and the pharmaceutically acceptable salts of these

25 compounds.

In one aspect, there is provided a compound of the formula I

4a(i)

where

m is 1 or 2,

n is 1 or 2,

5 A is selected from the group consisting of CH_2 , CH_2CH_2 , $CHFCH_2$ and CF_2CH_2 ,

R^1 is hydrogen or C_1 - C_3 -alkyl,

R^2 is selected from the group consisting of hydrogen and fluorine,

R^{3a} is selected from the group consisting of hydrogen and methyl,

10 R^{3b} is selected from the group consisting of hydrogen and methyl,

R^4 is branched C_4 - C_6 alkyl or branched fluorinated C_4 - C_6 alkyl, and

R^5 is an oxygen containing radical selected from the group consisting of C_1 - C_2 -alkoxy- C_1 - C_4 -alkyl, fluorinated C_1 - C_2 -alkoxy- C_1 - C_4 -alkyl, hydroxy- C_1 - C_4 -alkyl, fluorinated hydroxy- C_1 - C_4 -alkyl, oxetanyl, fluorinated oxetanyl, oxo-

15 lanyl, fluorinated oxolanyl, C_3 - C_5 cycloalkyl, fluorinated C_3 - C_5 cycloalkyl, where the cycloalkyl moiety in the last two mentioned radicals carries 1 or 2 radicals selected from

hydroxyl, C_1 - C_2 -alkoxy and fluorinated C_1 - C_2 -alkoxy and may additionally carry 1 or 2 radicals selected from C_1 - C_2 -alkyl and fluorinated C_1 - C_2 -alkyl,

20 C_3 - C_5 cycloalkoxy- C_1 - C_4 -alkyl and fluorinated C_3 - C_5 cycloalkoxy- C_1 - C_4 -alkyl, where the cycloalkoxy moiety in the last two mentioned radicals may carry 1 or 2 radicals selected from hydroxyl, C_1 - C_2 -alkoxy, fluorinated C_1 - C_2 -alkoxy, C_1 - C_2 -alkyl and fluorinated C_1 - C_2 -alkyl,

and the pharmaceutically acceptable salts of these compounds.

25 In one aspect, there is provided a compound as disclosed herein for use as a medicament.

In one aspect, there is provided a pharmaceutical composition comprising at least one compound as disclosed herein, optionally together with at least one physiologically acceptable carrier or auxiliary substance.

5 In one aspect, there is provided a use of at least one compound as disclosed herein in the manufacture of a medicament for treating a medical disorder or condition susceptible to treatment with a dopamine D₃ receptor ligand.

In one aspect, there is provided the use of at least one compound as disclosed herein in the manufacture of a medicament for treating a disorder or condition of the central nervous system.

10 In one aspect, there is provided the use of at least one compound as disclosed herein in the manufacture of a medicament for treating Parkinson's disease, schizophrenia, bipolar disorder, depression, motivation disturbances, anxiety, cognitive dysfunction, pain, substance dependence, substance abuse, substance tolerance, substance withdrawal, anorexia and weight loss.

15 In one aspect, there is provided the use of at least one compound as disclosed herein in the manufacture of a medicament for treating diabetic nephropathy.

The present disclosure is thus based on the object of providing compounds which selectively bind to the dopamine D₃ receptor at low concentrations.

The compounds are further intended to display at least one of the properties i. to
20 viii. mentioned above, in particular high selectivity with regard to dopamine D₃ receptor

vs. dopamine D2 receptor, enhanced metabolic stability, in particular microsomal stability, cytosolic stability or hepatocyte stability, low affinity to the HERG receptor, low inhibition of cytochrome P450 (CYP) enzymes, suitable solubility in water and suitable pharmacokinetics.

- 5 This object and further objects are achieved by the compounds of the general formula I described below, the N-oxides and the pharmaceutically suitable salts thereof:

where

- m is 1 or 2,
- 10 n is 1 or 2,
- A is selected from the group consisting of CH₂, CH₂CH₂, CHFCH₂ and CF₂CH₂,
- R¹ is hydrogen or C₁-C₃-alkyl,
- R² is selected from the group consisting of hydrogen, and fluorine,
- R^{3a} is selected from the group consisting of hydrogen and methyl,
- 15 R^{3b} is selected from the group consisting of hydrogen and methyl,
- R⁴ is branched C₄-C₆ alkyl or branched fluorinated C₄-C₆ alkyl, and
- R⁵ is an oxygen containing radical selected from the group consisting of C₁-C₂-alkoxy-C₁-C₄-alkyl, fluorinated C₁-C₂-alkoxy-C₁-C₄-alkyl, hydroxy-C₁-C₄-alkyl, fluorinated hydroxy-C₁-C₄-alkyl, oxetanyl, fluorinated oxetanyl, oxolanyl, fluorinated oxolanyl, C₃-C₅ cycloalkyl, fluorinated C₃-C₅ cycloalkyl, where the cycloalkyl moiety in the last two mentioned radicals carries 1 or 2 radicals selected from hydroxyl, C₁-C₂-alkoxy and fluorinated C₁-C₂-alkoxy and may additionally carry 1 or 2 radicals selected from C₁-C₂-alkyl and fluorinated C₁-C₂-alkyl, C₃-C₅ cycloalkoxy-C₁-C₄-alkyl and fluorinated C₃-C₅ cycloalkoxy-C₁-C₄-alkyl,
- 20 where the cycloalkoxy moiety in the last two mentioned radicals may carry 1 or 2 radicals selected from hydroxyl, C₁-C₂-alkoxy, fluorinated C₁-C₂-alkoxy, C₁-C₂-alkyl and fluorinated C₁-C₂-alkyl.

The present disclosure therefore relates to the compounds of the general formula I, the N-oxides and the pharmaceutically acceptable salts of the compounds of formula I, the prodrugs of the compounds of formula I and the pharmaceutically acceptable salts of said N-oxides and prodrugs of the compounds of formula I. The present disclosure in particular
5 relates to the compounds of the general formula I and to their pharmaceutically acceptable salts.

The present disclosure therefore relates to the compounds of the general formula I, the N-oxides and the pharmaceutically acceptable salts of the compounds of formula I, the prodrugs of the compounds of formula I and the pharmaceutically acceptable salts of said N-oxides and prodrugs of the compounds of formula I for the use as a medicament.
10

The present disclosure also relates to the compounds of the general formula I, the N-oxides, the pharmaceutically acceptable salts of the compounds of formula I, the prodrugs of the compounds of formula I and the pharmaceutically acceptable salts of said N-oxides or prodrugs of the compounds of formula I for the use in the treatment of a medical disorder
15 susceptible to treatment with a dopamine D₃ receptor ligand, in particular from a disorder selected from neurological and psychiatric disorders which can be treated by modulation of the dopamine D₃ receptor, in particular by at least partially antagonizing the dopamine D₃ receptor.

The compounds of the formula I, their pharmaceutically acceptable salts, their
20 N-oxides and their prodrugs, and the pharmaceutically acceptable salts of said N-oxides or prodrugs selectively bind to the dopamine D₃ receptor even at low concentrations, and are in particular at least partial antagonists of the D₃ receptor.

They are additionally distinguished by a high selectivity in relation to binding to the dopamine D₃ receptor vis-à-vis binding to dopamine D₂ receptor or adrenergic or
25 serotonergic receptors such as alpha-1, alpha-2, 5HT₁ and 5HT₂. The compounds of the invention may additionally have one or more of the above mentioned properties ii. to viii.

The compounds of the formula I, their pharmaceutically acceptable salts, their N-oxides, their prodrugs, and the pharmaceutically acceptable salts of said N-oxides, and prodrugs are therefore particularly suitable for treating disorders and conditions in creatures,
30 especially human creatures, which can be treated or controlled by modulation of the dopamine D₃ receptor.

The diseases which respond to the influence of dopamine D3 receptor ligands or agonists include disorders and diseases of the central nervous system, in particular affective disturbances, neurotic disturbances, stress disturbances and somatoform disturbances and psychoses, and especially Parkinson's disease, schizophrenia, major depressive disorder (depression), motivation disturbances, bipolar disorder, disorders related to substance abuse (also termed drug abuse), eating disorders, cognitive dysfunction, in particular cognitive dysfunction associated with schizophrenia or dementia, anxiety, attention deficit disorder with or without hyperactivity and personality disorder. In addition, D3-mediated diseases may include disturbances of kidney function, i.e. renal function disorders, in particular kidney function disturbances which are caused by diabetes such as diabetes mellitus, also termed as diabetic nephropathy. It may also be possible to ameliorate pain by administering dopamine D3 receptor ligands.

The disclosure therefore also relates to the use of the compounds of the formula I, their N-oxides, prodrugs and their pharmaceutically acceptable salts and the pharmaceutically acceptable salts of said N-oxides or prodrugs, for the manufacture of a medicament, in particular of a medicament which is suitable for the treatment of a disorder or a condition which can be treated by modulation of the dopamine D3 receptor..

The disclosure further relates to a medicament, in particular a medicament which is suitable for the treatment of a disorder or a condition which can be treated by modulation of the dopamine D3 receptor and in particular by at least partially antagonizing the dopamine D3 receptor. The medicament comprises at least one compound of the formula I, as described herein, or an N-oxide, or a prodrug of said compound I, or a pharmaceutically acceptable salt of the compound of the formula I or a pharmaceutically acceptable salt of the N-oxide, or the prodrug of compound of the formula I.

Detailed Description of the Invention

The terms "compound of the formula I" and "compounds I" are used as synonyms.

The term "prodrugs" means compounds which are metabolized in vivo to the compounds I of the invention. Typical examples of prodrugs are described in C.G. Wermuth (editor): The Practice of Medicinal Chemistry, Academic Press, San Diego,

1996, pages 671-715. These include for example phosphates, carbamates, amino acids, esters, amides, peptides, ureas and the like. Suitable prodrugs in the present case may be for example derivatives of those compounds I carrying an OH group, where the OH group forms an ester linkage, i.e. where the hydrogen atom of the OH group is substituted by a C₁-C₄-alkylcarbonyl group, e.g. by acetyl, propionyl, n-propylcarbonyl, isopropylcarbonyl, n-butylcarbonyl or tert-butylcarbonyl (pivaloyl), by benzoyl, or by an acyl group derived from an amino acid, e.g. glycine, alanine, serine, phenylalanine and the like, which is linked to the oxygen or nitrogen of the OH group via the carbonyl group of the amino acid. Further suitable prodrugs are alkylcarbonyloxyalkyl carbonates of compounds I carrying an OH group in which the hydrogen atom of the OH group has been replaced by a group of the formula -C(=O)-O-CHR^p-O-C(=O)-R^q in which R^p and R^q are independently of one another C₁-C₄-alkyl. Such carbonates are described for example in J. Alexander, R. Cargill, S. R. Michelson, H. Schwam, J. Medicinal Chem. 1988, 31(2), 318-322. These groups can then be eliminated under metabolic conditions and result in compounds I. Therefore, said prodrugs and their pharmaceutically acceptable salts are also part of the invention.

The term "pharmaceutically acceptable salts" refers to cationic or anionic salts compounds, wherein the counter ion is derived from pharmaceutically acceptable non-toxic bases or acids including inorganic or organic bases and inorganic or organic acids.

As the compound of formula I or its prodrug, or N-oxide is basic, salts may be prepared from pharmaceutically acceptable non-toxic acids, including inorganic and organic acids. Such acids include acetic, trifluoroacetic acid, benzenesulfonic, benzoic, camphorsulfonic, citric, ethanesulfonic, fumaric, gluconic, glutamic, hydrobromic, hydrochloric, isethionic, lactic, maleic, malic, mandelic, methanesulfonic, mucic, nitric, pamoic, pantothenic, phosphoric, succinic, sulfuric, tartaric, p-toluenesulfonic acid, and the like. Particularly preferred are citric, hydrobromic, hydrochloric, maleic, phosphoric, sulfuric, fumaric, and tartaric acids. It will be understood that, as used herein, references to the compounds of formula I are meant to also include the pharmaceutically acceptable salts.

The compounds of the invention may be in the form of a mixture of diastereomers, or of a mixture of diastereomers in which one of the two diastereomers is enriched, or of essentially diastereomerically pure compounds (diastereomeric excess de > 90%). The

compounds are preferably in the form of essentially diastereomerically pure compounds (diastereomeric excess $de > 90\%$). The compounds I of the invention may furthermore be in the form of a mixture of enantiomers (for example as racemate), of a mixture of enantiomers in which one of the two enantiomers is enriched, or essentially in
5 enantiomerically pure compounds (enantiomeric excess $ee > 90\%$). It is preferred to employ the compounds enantiomerically pure or diastereomerically pure.

The present invention moreover relates to compounds as defined herein, wherein one or more of the atoms depicted in formula I have been replaced by a stable isotope (e.g., hydrogen by deuterium, ^{12}C by ^{13}C , ^{14}N by ^{15}N , ^{16}O by ^{18}O) or by an instable
10 isotope (e.g. ^{12}C by ^{11}C , ^{16}O by ^{15}O , ^{19}F by ^{18}F), preferably by a stable isotope, or enriched with regard to said isotope beyond the natural level. Of course, the compounds according to the invention contain more of the respective isotope than this naturally occurs and thus is anyway present in the compounds I.

The compounds of the formula I and their salts in the solid form may exist in more
15 than one crystal structure (polymorphism), and may also be in the form of hydrates or other solvates. The present invention includes any polymorph of the compound I or its salt as well as any hydrate or other solvate.

In the context of the present description, unless stated otherwise, the terms "alkyl", "fluorinated alkyl", "alkoxy", "fluorinated alkoxy" and radicals derived therefrom, such as
20 "hydroxyalkyl", "alkoxyalkyl", "fluorinated hydroxyalkyl" and "fluorinated alkoxyalkyl", represent groups of individual radicals. The groups of noncyclic radicals "alkyl", "alkoxy", "fluorinated alkoxy", "hydroxyalkyl", "alkoxyalkyl", "fluorinated hydroxyalkyl" and "fluorinated alkoxyalkyl", always include both unbranched and branched "alkyl", "alkoxy", "fluorinated alkoxy", "hydroxyalkyl", "alkoxyalkyl", "fluorinated hydroxyalkyl"
25 and "fluorinated alkoxyalkyl", respectively.

The prefix $\text{C}_n\text{-C}_m\text{-}$ indicates the respective number of carbons in the hydrocarbon unit. Unless indicated otherwise, fluorinated substituents usually have 1, 2, 3, 4, 5, 6 or 7 fluorine atoms.

Examples of meanings are:

30 Alkyl, and the alkyl moieties for example in alkoxy, alkoxyalkyl and hydroxyalkyl: saturated, straight-chain or branched hydrocarbon radicals having one or more C atoms,

e.g. 1, 2, 3, 4, 5 or 6 carbon atoms. Examples of C₁-C₃-alkyl are methyl, ethyl, n-propyl and 1-methylethyl.

Branched C₄-C₆ alkyl is a branched alkyl radical having 4, 5 or 6 carbon atoms. Examples of branched C₄-C₆-alkyl are 1-methylpropyl, 2-methylpropyl, 1,1-dimethylethyl
 5 (= tert.-butyl), 1-methylbutyl, 2-methylbutyl, 3-methylbutyl, 2,2-dimethylpropyl, 1-ethylpropyl, 1,1-dimethylpropyl, 1,2-dimethylpropyl, 1-methylpentyl, 2-methylpentyl, 3-methylpentyl, 4-methylpentyl, 1,1-dimethylbutyl, 1,2-dimethylbutyl, 1,3-dimethylbutyl, 2,2-dimethylbutyl, 2,3-dimethylbutyl, 3,3-dimethylbutyl, 1-ethylbutyl, 2-ethylbutyl, 1,1,2-trimethylpropyl, 1,2,2-trimethylpropyl, 1-ethyl-1-methylpropyl and 1-ethyl-2-
 10 methylpropyl.

Fluorinated alkyl and the alkyl moieties for example in fluorinated alkoxy, fluorinated alkoxyalkyl and fluorinated hydroxyalkyl: saturated, straight-chain or branched hydrocarbon radicals having one or more C atoms, e.g. 1, 2, 3, 4, 5 or 6 carbon atoms, in particular 1 or 2 carbon atoms, where at least one of the hydrogen atoms of the
 15 hydrocarbon radical has been replaced by a fluorine atom, examples including fluoromethyl, difluoromethyl, trifluoromethyl, 2-fluoroethyl, 2,2-difluoroethyl, 2,2,2-trifluoroethyl, 1-fluoroethyl, 1,1-difluoroethyl, 1,1,2,2-tetrafluoroethyl, pentafluoroethyl etc.

Branched fluorinated C₄-C₆ alkyl is a branched alkyl radical having 4, 5 or 6 carbon
 20 atoms, as defined above, where at least one of the hydrogen atoms of the branched alkyl radical has been replaced by a fluorine atom, examples including 1-(fluoromethyl)ethyl, 1-(difluoromethyl)ethyl, 1-(trifluoromethyl)ethyl, 1,1,1,3,3,3-hexafluoro-2-propyl, heptafluoro-2-propyl, 1-(fluoromethyl)-1-propyl, 1-(difluoromethyl)-1-propyl, 1-(trifluoromethyl)-1-propyl, 2-(fluoromethyl)-2-propyl, 2-(difluoromethyl)-2-propyl and 2-(trifluoromethyl)-2-propyl.
 25

C₁-C₂-alkoxy is methoxy and ethoxy.

C₁-C₂-alkoxy-C₁-C₂-alkyl is methoxymethyl, ethoxymethyl, 1-methoxyethyl, 2-methoxyethyl, 1-ethoxyethyl and 2-methoxyethyl.

C₁-C₂-alkoxy-C₁-C₄-alkyl: C₁-C₂-alkoxyC₁-C₂-alkyl as mentioned above and also,
 30 for example 2-(methoxy)propyl, 2-(ethoxy)propyl, 3-(methoxy)propyl, 3-(ethoxy)propyl, 2-(methoxy)butyl, 2-(ethoxy)butyl, 3-(methoxy)butyl, 3-(ethoxy)butyl, 4-(methoxy)butyl and 4-(ethoxy)butyl.

Hydroxyalkyl: an alkyl radical ordinarily having 1, 2, 3 or 4 C atoms, in which one hydrogen atom is replaced by an OH radical. Examples thereof are hydroxymethyl, 1-hydroxyethyl, 2-hydroxyethyl, 1-hydroxypropyl, 2-hydroxypropyl, 1-methyl-1-hydroxyethyl, 1-methyl-2-hydroxyethyl, 3-hydroxypropyl, 2-hydroxybutyl, 3-hydroxybutyl, 4-hydroxybutyl, 1-methyl-2-hydroxypropyl, 1,1-dimethyl-2-hydroxyethyl, 1-methyl-1-hydroxypropyl etc.

Fluorinated alkoxy is an alkoxy radical as described above, in which the hydrogen atoms of these groups are partly or completely replaced by fluorine atoms, i.e. for example fluorinated C₁-C₂-alkoxy, such as fluoromethoxy, difluoromethoxy, trifluoromethoxy, 2-fluoroethoxy, 2,2-difluoroethoxy, 2,2,2-trifluoroethoxy, 1,1,2,2-tertrafluoroethoxy and pentafluoroethoxy.

Fluorinated alkoxyalkyl is an alkoxyalkyl radical as described above, in which the hydrogen atoms of the alkoxy part and/or of the alkyl part are partly or completely replaced by fluorine atoms, i.e. for example fluorinated C₁-C₂-alkoxy-C₁-C₂-alkyl-, such as fluoromethoxymethyl, difluoromethoxymethyl, trifluoromethoxymethyl, 2-fluoroethoxymethyl, 2,2-difluoroethoxymethyl, 2,2,2-trifluoroethoxymethyl, 1,1,2,2-tertrafluoroethoxymethyl, pentafluoroethoxymethyl, 1-(fluoromethoxy)ethyl, 1-(difluoromethoxy)ethyl, 1-(trifluoromethoxy)ethyl, 1-(2-fluoroethoxy)ethyl, 1-(2,2-difluoroethoxy)ethyl, 1-(2,2,2-trifluoroethoxy)ethyl, 1-(1,1,2,2-tertrafluoroethoxy)ethyl, 1-(pentafluoroethoxy)ethyl, 2-(fluoromethoxy)ethyl, 2-(difluoromethoxy)ethyl, 2-(trifluoromethoxy)ethyl, 2-(2-fluoroethoxy)ethyl, 2-(2,2-difluoroethoxy)ethyl, 2-(2,2,2-trifluoroethoxy)ethyl, 2-(1,1,2,2-tertrafluoroethoxy)ethyl, 2-(pentafluoroethoxy)ethyl, methoxyfluoroethyl, ethoxyfluoromethyl, methoxydifluoromethyl, ethoxydifluoromethyl, difluoromethoxyfluoroethyl, 2,2,2-trifluoroethoxyfluoromethyl, difluoromethoxydifluoromethyl, 2,2,2-trifluoroethoxydifluoromethyl, 2-methoxy-1-fluoroethyl, 2-ethoxy-1-fluoroethyl, 2-difluoromethoxy-1-fluoroethyl, 2-(2,2-difluoroethoxy)-1-fluoroethyl, 2-(2,2,2-trifluoroethoxy)-1-fluoroethyl, 2-methoxy-1,1-difluoroethyl, 2-ethoxy-1,1-difluoroethyl, 2-difluoromethoxy-1,1-difluoroethyl, 2-(2,2-difluoroethoxy)-1,1-difluoroethyl and 2-(2,2,2-trifluoroethoxy)-1,1-difluoroethyl. Examples of fluorinated C₁-C₂-alkoxy-C₁-C₄-alkyl are fluorinated C₁-C₂-alkoxy-C₁-C₂-alkyl as defined above and also for example 3-(fluoromethoxy)propyl, 3-

(difluoromethoxy)propyl, 3-(trifluoromethoxy)propyl, 3-(2-fluoroethoxy)propyl, 3-(2,2-difluoroethoxy)propyl, 3-(2,2,2-trifluoroethoxy)propyl, 3-(1,1,2,2-terafluoroethoxy)propyl, 3-(pentafluoroethoxy)propyl, 2-fluoro-3-methoxypropyl, 2-fluoro-3-ethoxypropyl, 2,2-difluoro-3-methoxypropyl, 3-difluoromethoxy-2,2-difluoropropyl, 2-fluoro-3-(fluoromethoxy)propyl, 4-(fluoromethoxy)butyl, 4-(difluoromethoxy)butyl, 4-(trifluoromethoxy)butyl, 4-(2-fluoroethoxy)butyl, 4-(2,2-difluoroethoxy)butyl, 4-(2,2,2-trifluoroethoxy)butyl, 4-(1,1,2,2-terafluoroethoxy)butyl, 4-(pentafluoroethoxy)butyl, 1-fluoro-4-methoxybutyl, 2-fluoro-4-methoxybutyl, 3-fluoro-4-methoxybutyl, 2-fluoro-3-ethoxypropyl, 2-fluoro-3-fluoromethoxy-2-methyl-butyl, 2,2-difluoro-3-methoxybutyl, 4-difluoromethoxy-2,2-difluorobutyl, 2-fluoro-4-(fluoromethoxy)butyl.

C₃-C₅ cycloalkoxy-C₁-C₄-alkyl is a C₁-C₄-alkyl radical as defined above, where one hydrogen atom is replaced by a cycloalkoxy radical such as cyclopropyloxy, cyclobutyloxy or cyclopentyloxy, examples including cyclopropoxymethyl, cyclobutoxymethyl, 1-cyclopropoxyethyl, 2-cyclopropoxyethyl, 1-cyclobutoxyethyl, 2-cyclobutoxyethyl cyclopentoxymethyl, 1-cyclopentoxyethyl and 2-cyclopentoxyethyl.

Fluorinated C₃-C₅ cycloalkoxy-C₁-C₄-alkyl is a C₃-C₅ cycloalkoxy-C₁-C₄-alkyl radical as defined above, in which the hydrogen atoms of the cycloalkoxy part and/or of the alkyl part are partly or completely replaced by fluorine atoms.

Examples of oxetanyl include 2-oxetanyl and 3-oxetanyl. Fluorinated oxetanyl includes e.g. 2-fluoro-2-oxetanyl, 3-fluoro-2-oxetanyl, 3,3-difluoro-2-oxetanyl, 2-fluorooxetan-3-yl, 3-fluorooxetan-3-yl and 2,2-difluorooxetan-3-yl.

Examples of oxolanyl include 2-oxolanyl and 3-oxolanyl. Fluorinated oxolanyl includes e.g. 2-fluoro-2-oxolanyl, 3-fluoro-2-oxolanyl, 4-fluoro-2-oxolanyl, 5-fluoro-2-oxolanyl, 2-fluoro-3-oxolanyl, 3-fluoro-3-oxolanyl, 4-fluoro-3-oxolanyl, 5-fluoro-3-oxolanyl, 3,3-difluoro-2-oxolanyl, 4,4-difluoro-2-oxolanyl, 5,5-difluoro-2-oxolanyl, 2,2-difluoro-3-oxolanyl, 4,4-difluoro-3-oxolanyl and 5,5-difluoro-3-oxolanyl.

In relation to their intended use, the variables m, n, A, R¹, R², R^{3a}, R^{3b}, R⁴ and R⁵ in formula I in particular have the following meanings, where these represent, both considered on their own and in combination with at least one other or all, special embodiments of the compounds of the formula I:

R¹ is in particular hydrogen or methyl. Especially R¹ is methyl.

R^2 is in particular hydrogen.

In a particular group of embodiments, the variable m in formula I is 2.

In another particular group of embodiments, the variable m in formula I is 1.

In a particular group of embodiments, the variable n in formula I is 2.

5 In a special group of embodiments, the both variables m and n in formula I are 2.

In another special group of embodiments, the both variables m and n in formula I are 1.

In another special group of embodiments, the variable m in formula I is 2 while the variable n is 1.

10 In particular groups of embodiments of the invention, both R^{3a} and R^{3b} are hydrogen or one of R^{3a} and R^{3b} is methyl, while the other is hydrogen.

In a special group of embodiments of the invention, both R^{3a} and R^{3b} in formula I are hydrogen.

15 In another special groups of embodiments of the invention one of R^{3a} and R^{3b} in formula I is methyl, while the other is hydrogen.

If R^{3a} is methyl, the carbon atom bearing the radical R^{3a} is an asymmetric centre and thus said carbon atom may adopt either S-configuration or R-configuration. The invention thus relates both to the essentially pure R-enantiomer (enantiomeric excess $ee > 90\%$), i.e. to the compounds of formula I, where R^{3a} is methyl and the carbon atom bearing the radical R^{3a} has R-configuration, and to the essentially pure S-enantiomer (enantiomeric excess $ee > 90\%$), i.e. to the compounds of formula I, where R^{3a} is methyl and the carbon atom bearing the radical R^{3a} has S-configuration. The invention also relates to racemic mixtures of said R-enantiomer and said S-enantiomer as well as to non-racemic mixtures, which are enriched with regard to either said R-enantiomer or said S-enantiomer.

20

25

Likewise, if R^{3b} is methyl, the carbon atom bearing the radical R^{3b} is an asymmetric centre and thus said carbon atom may adopt either S-configuration or R-configuration. The invention thus relates both to the essentially pure R-enantiomer (enantiomeric excess $ee > 90\%$), i.e. to the compounds of formula I, where R^{3b} is methyl and the carbon atom bearing the radical R^{3b} has R-configuration, and to the essentially pure S-enantiomer (enantiomeric excess $ee > 90\%$), i.e. to the compounds of formula I, where R^{3b} is methyl and the carbon atom bearing the radical R^{3a} has S-configuration. The invention also

30

relates to racemic mixtures of said R-enantiomer and said S-enantiomer as well as to non-racemic mixtures, which are enriched with regard to either said R-enantiomer or said S-enantiomer.

In particular groups of embodiments, the variable A in formula I is CH₂.

- 5 In further particular groups of embodiments, the variable A in formula I is CH₂CH₂, CHFCH₂ or CF₂CH₂. If A is CHF₂CH, then the CH₂-group of A is preferably attached to the nitrogen. If A is CF₂CH₂, then the CH₂-group of A is preferably attached to the nitrogen.

- 10 In particular groups of embodiments, the variable R⁴ in formula I is attached to the pyrimidine ring by a tertiary carbon atom such as in tert.-butyl or 2-methyl-2-butyl. In particular, the variable R⁴ in formula I is tert.-butyl.

A special group of embodiments relates to compounds of the formula I, where

A is CH₂, CH₂CH₂, CHFCH₂ or CF₂CH₂;

R¹ is hydrogen or methyl;

- 15 R² is hydrogen;

R^{3a} and R^{3b} are hydrogen or either R^{3a} is methyl and R^{3b} is hydrogen or R^{3a} is hydrogen and R^{3b} is methyl; and

R⁴ is tert-butyl.

- 20 In particular groups of embodiments, the variable R⁵ in formula I is selected from the group consisting of C₁-C₂-alkoxy-C₁-C₂-alkyl, fluorinated C₁-C₂-alkoxy-C₁-C₂-alkyl and hydroxy-C₁-C₄-alkyl, especially from the group consisting of C₁-C₂-alkoxy-C₁-C₂-alkyl and hydroxy-C₁-C₄-alkyl. In these groups of embodiments, R⁵ is in particular selected from the group consisting of methoxymethyl, ethoxymethyl, 2-methoxyethyl, difluoromethoxymethyl, 2-(difluoromethoxy)ethyl, trifluoromethoxymethyl, 25 2-(trifluoromethoxy)ethyl, methoxydifluoromethyl, ethoxydifluoromethyl, 2-methoxy-1,1-difluoroethyl, hydroxymethyl, 2-hydroxyethyl, 2-hydroxypropyl and 2-hydroxy-2-methylpropyl, especially from the group consisting of methoxymethyl, ethoxymethyl, 2-methoxyethyl, 2-hydroxyethyl, 2-hydroxypropyl and 2-hydroxy-2-methylpropyl.

- 30 In other particular groups of embodiments, the variable R⁵ in formula I is selected from the group consisting of oxetanyl, fluorinated oxetanyl, oxolanyl, fluorinated oxolanyl, and C₃-C₅ cycloalkyl, which carries 1 or 2 radicals selected from hydroxyl, C₁-C₂-alkoxy and fluorinated C₁-C₂-alkoxy. In these groups of embodiments, R⁵ is in

particular selected from the group consisting of 2-oxetanyl, 3-oxetanyl, 2-oxolanyl, 3-oxolanyl, 3-methoxycyclobutyl and 3-hydroxycyclobutyl.

Especially R^5 is C_1 - C_2 -alkoxy- C_1 - C_2 -alkyl.

A particular group of embodiments of the invention relates to compounds of the
5 formula Ia

where R^1 , R^{3a} , R^{3b} , R^5 and A are as defined above, the physiologically tolerated salts of these compounds and the N-oxides thereof.

Another particular group of embodiments of the invention relates to compounds of
10 the formula Ib

where R^1 , R^{3a} , R^{3b} , R^5 and A are as defined above, the physiologically tolerated salts of these compounds and the N-oxides thereof.

Another particular group of embodiments of the invention relates to compounds of
15 the formula Ic

where R¹, R^{3a}, R^{3b}, R⁵ and A are as defined above, the physiologically tolerated salts of these compounds and the N-oxides thereof.

A special group of embodiments relates to compounds of the formulae Ia, Ib and
5 Ic, where

A is CH₂, CH₂CH₂, CHFCH₂ or CF₂CH₂;

R¹ is hydrogen or methyl;

R² is hydrogen;

R^{3a} and R^{3b} are hydrogen or either R^{3a} is methyl and R^{3b} is hydrogen or R^{3a} is
10 hydrogen and R^{3b} is methyl; and

R⁵ is as defined above.

In particular groups of embodiments, the variable R⁵ in formulae Ia, Ib and Ic is
selected from the group consisting of C₁-C₂-alkoxy-C₁-C₂-alkyl, fluorinated C₁-C₂-
alkoxy-C₁-C₂-alkyl and hydroxy-C₁-C₄-alkyl, especially from the group consisting of C₁-
15 C₂-alkoxy-C₁-C₂-alkyl and hydroxy-C₁-C₄-alkyl. In these groups of embodiments, R⁵ is
in particular selected from the group consisting of methoxymethyl, ethoxymethyl, 2-
methoxyethyl, difluoromethoxymethyl, 2-(difluoromethoxy)ethyl,
trifluoromethoxymethyl, 2-(trifluoromethoxy)ethyl, methoxydifluoromethyl,
ethoxydifluoromethyl, 2-methoxy-1,1-difluoroethyl, hydroxymethyl, 2-hydroxyethyl, 2-
20 hydroxypropyl and 2-hydroxy-2-methylpropyl, especially from the group consisting of
methoxymethyl, ethoxymethyl, 2-methoxyethyl, 2-hydroxyethyl, 2-hydroxypropyl and 2-
hydroxy-2-methylpropyl.

In other particular groups of embodiments, the variable R⁵ in formulae Ia,
Ib and Ic is selected from the group consisting of oxetanyl, fluorinated oxetanyl,
25 oxolanyl, fluorinated oxolanyl, and C₃-C₅ cycloalkyl, which carries 1 or 2 radicals
selected from hydroxyl, C₁-C₂-alkoxy and fluorinated C₁-C₂-alkoxy. In these groups of

embodiments, R^5 is in particular selected from the group consisting of 2-oxetanyl, 3-oxetanyl, 2-oxolanyl, 3-oxolanyl, 3-methoxycyclobutyl and 3-hydroxycyclobutyl.

In formula I and likewise in formulae Ia, Ib and Ic, the radical $R^1-C(=O)-NH$ and the radical R^2 be located either cis or trans with respect to each other. The invention thus relates both to the essentially pure cis-isomer (cis/trans ratio is at least 9 : 1) and to the essentially pure trans-isomer (cis/trans ratio is at most 1 : 9) and. The invention also relates to mixtures of said cis-isomer and said trans isomer where the cis/trans ratio is from 1:9 to 9:1.

In a particular group of embodiments, the radical $R^1-C(=O)-NH$ and the radical R^2 predominately adopt cis-configuration. In this embodiment, the cis/trans-ratio is at least 8 : 1, in particular at least 9 : 1 and especially at least 95 : 5.

In another particular group of embodiments, the radical $R^1-C(=O)-NH$ and the radical R^2 predominately adopt trans-configuration. In this embodiment, the cis/trans-ratio is at most 1 : 8, in particular at most 1 : 9 and especially at most 5 : 95.

Examples of compounds according to the present invention include but are not limited to the compounds of the formulae Ia, Ib, and Ic summarized in the following tables 1 to 36, where R^1 , R^{3a} , R^{3b} and R^5 are as defined in one row of table A. In table A, rows R^{3a} and R^{3b} , the prefixes (S), (R) and (rac) indicate, whether the compound is the essentially pure R- or S-enantiomer or whether the compound is racemic.

Table 1: Compounds of the formula Ia, where A is CH_2 and where R^1 , R^{3a} , R^{3b} and R^5 are as defined in one row of table A.

Table 2: Compounds of the formula Ia, where A is CH_2CH_2 and where R^1 , R^{3a} , R^{3b} and R^5 are as defined in one row of table A.

Table 3: Compounds of the formula Ia, where A is CF_2CH_2 , where the CH_2 group of CF_2CH_2 is attached to the nitrogen and where R^1 , R^{3a} , R^{3b} and R^5 are as defined in one row of table A.

Table 4: Compounds of the formula Ia, where A is $CHFCH_2$, where the CH_2 group of $CHFCH_2$ is attached to the nitrogen and where R^1 , R^{3a} , R^{3b} and R^5 are as defined in one row of table A.

Table 5: Compounds of the formula Ia, where A is CH_2 and where R^1 , R^{3a} , R^{3b} and R^5 are as defined in one row of table A and where the substituents on 1,4-cyclohexadiyl radical predominately adopt cis-configuration.

Table 6: Compounds of the formula Ia, where A is CH_2CH_2 and where R^1 , R^{3a} , R^{3b} and R^5 are as defined in one row of table A and where the substituents on the 1,4-cyclohexadiyl radical predominately adopt cis-configuration.

5 Table 7: Compounds of the formula Ia, where A is CF_2CH_2 , where the CH_2 group of CF_2CH_2 is attached to the nitrogen and where R^1 , R^{3a} , R^{3b} and R^5 are as defined in one row of table A and where the substituents on the 1,4-cyclohexadiyl radical predominately adopt cis-configuration.

10 Table 8: Compounds of the formula Ia, where A is CHFCH_2 , where the CH_2 group of CHFCH_2 is attached to the nitrogen and where R^1 , R^{3a} , R^{3b} and R^5 are as defined in one row of table A and where the substituents on the 1,4-cyclohexadiyl radical predominately adopt cis-configuration.

Table 9 Compounds of the formula Ia, where A is CH_2 and where R^1 , R^{3a} , R^{3b} and R^5 are as defined in one row of table A and where the substituents on the 1,4-cyclohexadiyl radical predominately adopt trans-configuration.

15 Table 10: Compounds of the formula Ia, where A is CH_2CH_2 and where R^1 , R^{3a} , R^{3b} and R^5 are as defined in one row of table A and where the substituents on the 1,4-cyclohexadiyl radical predominately adopt trans-configuration.

20 Table 11: Compounds of the formula Ia, where A is CF_2CH_2 , where the CH_2 group of CF_2CH_2 is attached to the nitrogen and where R^1 , R^{3a} , R^{3b} and R^5 are as defined in one row of table A and where the substituents on the 1,4-cyclohexadiyl radical predominately adopt trans-configuration.

25 Table 12: Compounds of the formula Ia, where A is CHFCH_2 , where the CH_2 group of CHFCH_2 is attached to the nitrogen and where R^1 , R^{3a} , R^{3b} and R^5 are as defined in one row of table A and where the substituents on the 1,4-cyclohexadiyl radical predominately adopt trans-configuration.

Table 13: Compounds of the formula Ib, where A is CH_2 and where R^1 , R^{3a} , R^{3b} and R^5 are as defined in one row of table A.

Table 14: Compounds of the formula Ib; where A is CH_2CH_2 and where R^1 , R^{3a} , R^{3b} and R^5 are as defined in one row of table A.

30 Table 15: Compounds of the formula Ib, where A is CF_2CH_2 , where the CH_2 group of CF_2CH_2 is attached to the nitrogen and where R^1 , R^{3a} , R^{3b} and R^5 are as defined in one row of table A.

Table 16: Compounds of the formula Ib, where A is CHFCH₂, where the CH₂ group of CHFCH₂ is attached to the nitrogen and where R¹, R^{3a}, R^{3b} and R⁵ are as defined in one row of table A.

Table 17: Compounds of the formula Ib, where A is CH₂ and where R¹, R^{3a}, R^{3b} and R⁵ are as defined in one row of table A and where the substituents on the 1,3-cyclopentadiyl radical predominately adopt cis-configuration.

Table 18: Compounds of the formula Ib, where A is CH₂CH₂ and where R¹, R^{3a}, R^{3b} and R⁵ are as defined in one row of table A and where the substituents on the 1,3-cyclopentadiyl radical predominately adopt cis-configuration.

Table 19: Compounds of the formula Ib, where A is CF₂CH₂, where the CH₂ group of CF₂CH₂ is attached to the nitrogen and where R¹, R^{3a}, R^{3b} and R⁵ are as defined in one row of table A and where the substituents on the 1,3-cyclopentadiyl radical predominately adopt cis-configuration.

Table 20: Compounds of the formula Ib, where A is CHFCH₂, where the CH₂ group of CHFCH₂ is attached to the nitrogen and where R¹, R^{3a}, R^{3b} and R⁵ are as defined in one row of table A and where the substituents on the 1,3-cyclopentadiyl radical predominately adopt cis-configuration.

Table 21: Compounds of the formula Ib, where A is CH₂ and where R¹, R^{3a}, R^{3b} and R⁵ are as defined in one row of table A and where the substituents on the 1,3-cyclopentadiyl radical predominately adopt trans-configuration.

Table 22: Compounds of the formula Ib, where A is CH₂CH₂ and where R¹, R^{3a}, R^{3b} and R⁵ are as defined in one row of table A and where the substituents on the 1,3-cyclopentadiyl radical predominately adopt trans-configuration.

Table 23: Compounds of the formula Ib, where A is CF₂CH₂, where the CH₂ group of CF₂CH₂ is attached to the nitrogen and where R¹, R^{3a}, R^{3b} and R⁵ are as defined in one row of table A and where the substituents on the 1,3-cyclopentadiyl radical predominately adopt trans-configuration.

Table 24: Compounds of the formula Ib, where A is CHFCH₂, where the CH₂ group of CHFCH₂ is attached to the nitrogen and where R¹, R^{3a}, R^{3b} and R⁵ are as defined in one row of table A and where the substituents on the 1,3-cyclopentadiyl radical predominately adopt trans-configuration.

Table 25: Compounds of the formula Ic, where A is CH₂ and where R¹, R^{3a}, R^{3b} and R⁵ are as defined in one row of table A.

Table 26: Compounds of the formula Ic, where A is CH₂CH₂ and where R¹, R^{3a}, R^{3b} and R⁵ are as defined in one row of table A.

5 Table 27: Compounds of the formula Ic, where A is CF₂CH₂, where the CH₂ group of CF₂CH₂ is attached to the nitrogen and where R¹, R^{3a}, R^{3b} and R⁵ are as defined in one row of table A.

Table 28: Compounds of the formula Ic, where A is CHFCH₂, where the CH₂ group of CHFCH₂ is attached to the nitrogen and where R¹, R^{3a}, R^{3b} and R⁵ are as defined in one row of table A.

Table 29: Compounds of the formula Ic, where A is CH₂ and where R¹, R^{3a}, R^{3b} and R⁵ are as defined in one row of table A and where the substituents on the 1,3-cyclobutadiyl radical predominately adopt cis-configuration.

Table 30: Compounds of the formula Ic, where A is A is CH₂CH₂ and where R¹, R^{3a}, R^{3b} and R⁵ are as defined in one row of table A and where the substituents on the 1,3-cyclobutadiyl radical predominately adopt cis-configuration.

Table 31: Compounds of the formula Ic, where A is CF₂CH₂, where the CH₂ group of CF₂CH₂ is attached to the nitrogen and where R¹, R^{3a}, R^{3b} and R⁵ are as defined in one row of table A and where the substituents on the 1,3-cyclobutadiyl radical predominately adopt cis-configuration.

Table 32: Compounds of the formula Ic, where A is CHFCH₂, where the CH₂ group of CHFCH₂ is attached to the nitrogen and where R¹, R^{3a}, R^{3b} and R⁵ are as defined in one row of table A and where the substituents on the 1,3-cyclobutadiyl radical predominately adopt cis-configuration.

25 Table 33: Compounds of the formula Ic, where A is CH₂ and where R¹, R^{3a}, R^{3b} and R⁵ are as defined in one row of table A and where the substituents on the 1,3-cyclobutadiyl radical predominately adopt trans-configuration.

Table 34: Compounds of the formula Ic, where A is A is CH₂CH₂ and where R¹, R^{3a}, R^{3b} and R⁵ are as defined in one row of table A and where the substituents 1,3-cyclobutadiyl radical predominately adopt trans-configuration.

Table 35: Compounds of the formula Ic, where A is CF₂CH₂, where the CH₂ group of CF₂CH₂ is attached to the nitrogen and where R¹, R^{3a}, R^{3b} and R⁵ are as defined in one

row of table A and where the substituents on the 1,3-cyclobutadiyl radical predominately adopt trans-configuration.

Table 36: Compounds of the formula Ic, where A is CHFCH₂, where the CH₂ group of CHFCH₂ is attached to the nitrogen and where R¹, R^{3a}, R^{3b} and R⁵ are as
5 defined in one row of table A and where the substituents on the 1,3-cyclobutadiyl radical predominately adopt trans-configuration.

The compounds I according to the invention can be prepared by analogy to methods known from the literature. An important approach to the compounds according to the invention is offered by the reaction of a 2-(N-protected aminocycloalkyl)-

acetaldehyde compound II with an 4-piperazine-1-yl-pyrimidine compound III as depicted in scheme 1.

Scheme 1:

5

In scheme 1, n , m , R^1 , R^2 , R^{3a} , R^{3b} , R^4 , R^5 and A have the aforementioned meanings. Pg is N-protective group which can be cleaved under mild conditions, such as methoxycarbonyl, ethoxycarbonyl, tert-butoxycarbonyl (boc), benzyloxycarbonyl (cbz), 2-trimethylsilylethoxycarbonyl (Teoc) or 9-fluorenylmethoxycarbonyl (fmoc).

10

In step a) of scheme 1, an aldehyde of the formula (II) is reacted with a compound of formula III under conditions of a reductive amination. Usually a mild reducing agent, e.g. a borohydride such as sodium borohydride, sodium cyanoborohydride or sodium triacetoxyborohydride, is used. The skilled person is familiar with the reaction conditions which are required for a reductive amination, e.g. from Bioorganic and Medicinal Chemistry Lett. 2002, 12(5), pp. 795-798 and 12(7) pp. 1269-1273.

15

The thus obtained compound of formula IV is deprotected in step b) and reacted with an acylating agent, e.g. an C_2 - C_4 alkanoyl halide such as acetyl chloride, propionyl chloride or butanoyl chloride, an anhydride of a C_1 - C_4 -alkanoic acid such as acetanhydride, to yield the compound of the formula I.

20

Compounds of the formula II are well known, e.g. from WO 2008/125891, or can be prepared by analogy to the methods described in J. Med. Chem. 43, 1878 (2000)

Compounds of the formula III are well known, or can be prepared by analogy to the methods described in WO 99/02503, WO 2004/080981, WO2004/108706, WO 2005/118558, WO 2005/118571 and WO 2009/056625.

A particular approach to compounds of the formula III is shown in scheme 2 below:

Scheme 2:

In a first step, a piperazine compound V wherein Q is H or an N-protecting group is reacted with a pyrimidine compound VI wherein Z is halogen to yield a compound of the formula III. This method is known from the prior art cited in the introductory part of the application and also from WO 99/09015 and WO 03/002543.

The preparation of the pyrimidine compounds VI is simply achieved by reacting an amidinium chloride (VIII) with a suitable β -ketoester VII to yield a 4-hydroxypyrimidine of the formula IX which can be transformed to the halo compound VI by reacting it with halogenating agent such as thionyl chloride, phosphoryl chloride, phosphoryl bromide, phosphorous trichloride, phosphorous tribromide or phosphorous pentachloride (see scheme 3):

Scheme 3:

β -Ketoesters VII can be simply synthesized according to the methods described in this application from the corresponding acid chlorides R^5-COCl by reaction with meldrum's acid (2,2-dimethyl-4,6-dioxo-1,3-dioxan) according to the process as

described herein and in B. Trost *et al.*, *Journal of the American Chemical Society* (2002), 124(35):10396-10415; Paknikar, S. K. *et al.*, *Journal of the Indian Institute of Science* (2001), 81(2):175-179; and Brummell, David G. *et al.*, *Journal of Medicinal Chemistry* (2001), 44(1):78-93.

5 The N-oxides of compound I may be prepared from the compounds of formula I according to conventional oxidation methods, for example by treating said compounds with an organic peracid; such as metachloroperbenzoic acid (3-chloroperbenzoic acid) [Journal of Medicinal Chemistry 38(11), 1892-1903 (1995), WO 03/64572]; or with inorganic oxidizing agents; such as hydrogen peroxide [cf. Journal of Heterocyclic
10 Chemistry 18 (7), 1305-1308 (1981)] or oxone [cf. Journal of the American Chemical Society 123(25), 5962-5973 (2001)]. The oxidation may lead to pure mono-N-oxides or to a mixture of different N-oxides, which can be separated by conventional methods; such as chromatography.

15 The reactions are usually performed in an organic solvent, including aprotic organic solvent, e.g. substituted amides, lactames and ureas; such as dimethylformamide, dimethylacetamide, N-methylpyrrolidone, tetramethyl urea, cyclic ethers; such as dioxane, tetrahydrofuran, halogenated hydrocarbons; such as dichloromethane, and mixtures thereof as well as mixtures thereof with C₁-C₆-alkanols and/or water.

20 The reactions described above will be usually performed at temperatures ranging from -10°C to 100°C, depending on the reactivity of the used compounds.

25 The reaction mixtures are worked up in a conventional way, e.g. by mixing with water, separating the phases and, where appropriate, purifying the crude products by chromatography. The intermediates and final products in some cases result in the form of colorless or pale brownish, viscous oils which are freed of volatiles or purified under reduced pressure and at moderately elevated temperature. If the intermediates and final
30 products are obtained as solids, the purification can also take place by recrystallization or digestion.

Due to their capability of selectively binding to the dopamine D3 receptor at low concentrations, in particular at least partially antagonizing the Dopamine D3 receptor,
30 the compounds of the formula I, their N-oxides and their prodrugs and the pharmaceutically acceptable salts thereof, are particularly suitable for treating disorders or conditions, which can be treated by modulation of the dopamine D3 receptor, in

particular by at least partially antagonizing the Dopamine D3 receptor. The terms "treating" and "treatment" in terms of the present invention have to be understood to include both curative treatment of the cause of a disease or disorder, the treatment of the symptoms associated with a disease or disorder, i.e. controlling the disease or disorder or
5 ameliorating the conditions or symptoms associated with a disease or disorder, and prophylactic treatment, i.e. a treatment for reducing the risk of a disease or disorder.

Neurological and psychiatric disorders or conditions which can be treated by dopamine D3 receptor ligands, including curative treatment, control or amelioration and prophylaxis, include CNS disorders, in particular schizophrenia, depression, motivation
10 disturbances, bipolar disorders, cognitive dysfunctions, in particular cognitive dysfunctions associated with schizophrenia, cognitive dysfunctions associated with dementia (Alzheimer's disease), Parkinson's disease, anxiety, substance-related disorders, especially substance use disorder, substance tolerance conditions associated with substance withdrawal, attention deficit disorders with or without hyperactivity, eating
15 disorders, and personality disorder as well as pain. Disorders or conditions which can be treated by modulating the dopamine D3 receptor, including curative treatment, control or amelioration and prophylaxis, also include treatment of disturbances of kidney function, i.e. renal function disorders, in particular kidney function disturbances which are caused by diabetes such as diabetes mellitus, also termed as diabetic nephropathy.

20 Thus, the invention relates to the use of compounds of formula I, their N-oxides and their prodrugs and the pharmaceutically acceptable salts thereof, for treatment of disorders or conditions, which can be treated by modulation of the dopamine D3 receptor, i.e. the invention relates to the use of such compounds for curative treatment of such a disease or disorder, controlling such a disease or disorder, ameliorating the
25 symptoms associated with such a disease or disorder and reducing the risk for such a disease or disorder.

The present invention also relates to a method for the treatment of a medical disorder, selected from neurological and psychiatric disorders which can be treated by modulation of the dopamine D3 receptor, said method comprising administering an
30 effective amount of at least one compound, selected from the group of compounds of formula I, their N-oxides, their prodrugs and the pharmaceutically acceptable salts thereof, to a mammal in need thereof. The present invention also relates to a method for

the treatment of renal function disorders, in particular kidney function disturbances which are caused by diabetes such as diabetes mellitus, said method comprising administering an effective amount of at least one compound, selected from the group of compounds of formula I, their N-oxides, their prodrugs and the pharmaceutically acceptable salts thereof, to a mammal in need thereof.

The present invention in particular relates to:

- a method for treating, controlling, ameliorating or reducing the risk of schizophrenia in a mammalian;
- a method for treating, controlling, ameliorating or reducing the risk of cognitive disturbances associated with schizophrenia in a mammalian;
- a method for treating, controlling, ameliorating or reducing the risk of depression in a mammalian;
- a method for treating, controlling, ameliorating or reducing the risk of bipolar disorders in a mammalian;
- a method for treating or ameliorating the symptoms associated with substance abuse disorders in a mammalian;
- a method for treating or ameliorating the symptoms associated with eating disorders in a mammalian;
- a method for treating, controlling, ameliorating or reducing the risk of cognitive disturbances associated with Alzheimer's disease in a mammalian;
- a method for treating, controlling, ameliorating or reducing the risk of anxiety in a mammalian;
- a method for treating, controlling, ameliorating or reducing the risk of Parkinson's disease in a mammalian;
- a method for treating, controlling, ameliorating or reducing the risk of disturbances associated with Parkinson's disease in a mammalian;
- a method for treating, controlling, ameliorating or reducing the risk of renal function disorders, in particular diabetic nephropathy in a mammalian;

- a method for treating, controlling, ameliorating or reducing the risk of disturbances associated with renal function disorders, in particular diabetic nephropathy, in a mammalian;
- and a method for treating, ameliorating or reducing the risk of pain in a mammalian;

5 which methods comprising administering an effective amount of at least one compound, selected from the group of compounds of formula I, their N-oxides, their prodrugs and the pharmaceutically acceptable salts thereof, to a mammal in need thereof. The subject treated in the present methods is generally a mammal, preferably a human
10 being, male or female, in whom modulation of dopamine D3 receptor is desired. The terms "effective amount" and "therapeutically effective amount" mean the amount of the subject compound that will elicit the biological or medical response of a tissue, system, animal or human that is being sought by the researcher, veterinarian, medical doctor or other clinician. It is recognized that one skilled in the art may affect the neurological and
15 psychiatric disorders by treating a patient presently afflicted with the disorders or by prophylactically treating a patient afflicted with the disorders with an effective amount of the compound of the present invention. As used herein, the terms "treatment" and "treating" refer to all processes, wherein there may be a slowing, interrupting, arresting, controlling, or stopping of the progression of the disorders described herein, but does not
20 necessarily indicate a total elimination of all disorder symptoms, as well as the prophylactic therapy of the mentioned conditions, particularly in a patient who is predisposed to such disease or disorder. The term "composition" as used herein is intended to encompass a product comprising the specified ingredients in the specified amounts, as well as any product which results, directly or indirectly, from combination of
25 the specified ingredients in the specified amounts. Such term in relation to pharmaceutical composition, is intended to encompass a product comprising the active ingredient(s), and the inert ingredient(s) that make up the carrier, as well as any product which results, directly or indirectly, from combination, complexation or aggregation of any two or more of the ingredients, or from dissociation of one or more of the
30 ingredients, or from other types of reactions or interactions of one or more of the ingredients. Accordingly, the pharmaceutical compositions of the present invention

encompass any composition made by admixing a compound of the present invention and a pharmaceutically acceptable carrier. By "pharmaceutically acceptable" it is meant the carrier, diluent or excipient must be compatible with the other ingredients of the formulation and not deleterious to the recipient thereof.

5 The terms "administration of and or "administering a" compound should be understood to mean providing a compound of the invention or a prodrug of a compound of the invention to the individual in need of treatment.

A preferred embodiment of the present invention provides a method for treating schizophrenia, comprising: administering to a patient in need thereof an effective amount
10 of at least one compound, selected from the group of compounds of formula I, their N-oxides, their prodrugs and the pharmaceutically acceptable salts thereof.

In another preferred embodiment, the present invention provides a method for treating cognitive disturbances associated with schizophrenia, comprising: administering to a patient in need thereof an effective amount of at least one compound, selected from
15 the group of compounds of formula I, their N-oxides, their prodrugs and the pharmaceutically acceptable salts thereof.

At present, the fourth edition of the Diagnostic and Statistical Manual of Mental Disorders (DSM-IV) (1994, American Psychiatric Association, Washington, D.C.), provides a diagnostic tool including schizophrenia and other psychotic disorders. These
20 include: disorders having psychotic symptoms as the defining feature. The term psychotic refers to delusions, prominent hallucinations, disorganized speech, disorganized or catatonic behavior. The disorder includes: paranoid, disorganized, catatonic, undifferentiated, and residual schizophrenia, schizophreniform disorder, schizoaffective disorder, delusional disorder, brief psychotic disorder, shared psychotic disorder,
25 psychotic disorder due to a general medical condition, substance-induced psychotic disorder, and psychotic disorder not otherwise specified. The skilled artisan will recognize that there are alternative nomenclatures, nosologies, and classification systems for neurological and psychiatric disorders, and particular schizophrenia, and that these systems evolve with medical scientific progress. Thus, the term "schizophrenia" is
30 intended to include like disorders that are described in other diagnostic sources.

In another preferred embodiment, the present invention provides a method for treating substance-related disorders, comprising: administering to a patient in need

thereof an effective amount of at least one compound, selected from the group of compounds of formula I, their N-oxides, their prodrugs and the pharmaceutically acceptable salts thereof.

In another preferred embodiment, the present invention provides a method for
5 treating anxiety, comprising: administering to a patient in need thereof an effective amount of at least one compound, selected from the group of compounds of formula I, their N-oxides, their prodrugs and the pharmaceutically acceptable salts thereof. At present, the fourth edition of the Diagnostic and Statistical Manual of Mental Disorders (DSM-IV) (1994, American Psychiatric Association, Washington, D.C.), provides a
10 diagnostic tool including anxiety and related disorders. These include: panic disorder with or without agoraphobia, agoraphobia without history of panic disorder, specific phobia, social phobia, obsessive-compulsive disorder, post-traumatic stress disorder, acute stress disorder, generalized anxiety disorder, anxiety disorder due to a general medical condition, substance-induced anxiety disorder and anxiety disorder not otherwise
15 specified. As used herein the term "anxiety" includes treatment of those anxiety disorders and related disorder as described in the DSM-IV. The skilled artisan will recognize that there are alternative nomenclatures, nosologies, and classification systems for neurological and psychiatric disorders, and particular anxiety, and that these systems evolve with medical scientific progress. Thus, the term "anxiety" is intended to include
20 like disorders that are described in other diagnostic sources.

In another preferred embodiment, the present invention provides a method for treating depression, comprising: administering to a patient in need thereof an effective amount of at least one compound, selected from the group of compounds of formula I, their N-oxides, their prodrugs and the pharmaceutically acceptable salts thereof. At
25 present, the fourth edition of the Diagnostic and Statistical Manual of Mental Disorders (DSM-IV) (1994, American Psychiatric Association, Washington, D.C.), provides a diagnostic tool including depression and related disorders. Depressive disorders include, for example, single episodic or recurrent major depressive disorders, and dysthymic disorders, depressive neurosis, and neurotic depression; melancholic depression including
30 anorexia, weight loss, insomnia and early morning waking, and psychomotor retardation; atypical depression (or reactive depression) including increased appetite, hypersomnia, psychomotor agitation or irritability, anxiety and phobias; seasonal affective disorder; or

bipolar disorders or manic depression, for example, bipolar I disorder, bipolar II disorder and cyclothymic disorder. As used herein the term "depression" includes treatment of those depression disorders and related disorder as described in the DSM-IV.

In another preferred embodiment, the present invention provides a method for
5 treating substance-related disorders, especially substance dependence, substance abuse, substance tolerance, and substance withdrawal, comprising: administering to a patient in need thereof an effective amount at least one compound, selected from the group of compounds of formula I, their N-oxides, their prodrugs and the pharmaceutically acceptable salts thereof. At present, the fourth edition of the Diagnostic and Statistical
10 Manual of Mental Disorders (DSM-IV) (1994, American Psychiatric Association, Washington, D.C.), provides a diagnostic tool including disorders related to taking a drug of abuse (including alcohol), to the side effects of a medication, and to toxin exposure. Substances include alcohol, amphetamine and similarly acting sympathomimetics, caffeine, cannabis, cocaine, hallucinogens, inhalants, nicotine,
15 opioids, phencyclidine (PCP) or similarly acting arylcyclohexylamines, and sedatives, hypnotics, or anxiolytics. Also, polysubstance dependence and other unknown substance-related disorders are included. The skilled artisan will recognize that there are alternative nomenclatures, nosologies, and classification systems for neurological and psychiatric disorders, and particular substance-related disorders, and that these systems evolve with
20 medical scientific progress. Thus, the term "substance-related disorder" is intended to include like disorders that are described in other diagnostic sources.

In another preferred embodiment, the present invention provides a method for treating Parkinson's disease and the symptoms and disturbances associated with Parkinson's disease: comprising: administering to a patient in need thereof an effective
25 amount at least one compound, selected from the group of compounds of formula I, their N-oxides, their prodrugs and the pharmaceutically acceptable salts thereof.

In another preferred embodiment, the present invention provides a method for treating renal function disorders, in particular diabetic nephropathy: comprising: administering to a patient in need thereof an effective amount at least one compound,
30 selected from the group of compounds of formula I, their N-oxides, their prodrugs and the pharmaceutically acceptable salts thereof.

In the treatment, prevention, control, amelioration, or reduction of risk of conditions which require modulation of the dopamine D3 receptor an appropriate dosage level will generally be about 0.01 to 500 mg per kg patient body weight per day which can be administered in single or multiple doses. Preferably, the dosage level will be about 0.1 to about 250 mg/kg per day; more preferably about 0.5 to about 100 mg/kg per day. A suitable dosage level may be about 0.01 to 250 mg/kg per day, about 0.05 to 100 mg/kg per day, or about 0.1 to 50 mg/kg per day. Within this range the dosage may be 0.05 to 0.5, 0.5 to 5 or 5 to 50 mg/kg per day. For oral administration, the compositions are preferably provided in the form of tablets containing 1.0 to 1000 milligrams of the active ingredient, particularly 1.0, 5.0, 10.0, 15.0, 20.0, 25.0, 50.0, 75.0, 100.0, 150.0, 200.0, 250.0, 300.0, 400.0, 500.0, 600.0, 750.0, 800.0, 900.0, and 1000.0 milligrams of the active ingredient for the symptomatic adjustment of the dosage to the patient to be treated. The compounds may be administered on a regimen of 1 to 4 times per day, preferably once or twice per day. When treating, preventing, controlling, ameliorating, or reducing the risk of neurological and psychiatric disorders or other diseases for which compounds of the present invention are indicated, generally satisfactory results are obtained when the compounds of the present invention are administered at a daily dosage of from about 0.1 milligram to about 100 milligram per kilogram of animal body weight, preferably given as a single daily dose or in divided doses two to six times a day, or in sustained release form. For most large mammals, the total daily dosage is from about 1.0 milligrams to about 1000 milligrams, preferably from about 1 milligram to about 500 milligrams, in the case of a 70 kg adult human, the total daily dose will generally be from about 3 milligrams to about 350 milligrams. This dosage regimen may be adjusted to provide the optimal therapeutic response. It will be understood, however, that the specific dose level and frequency of dosage for any particular patient may be varied and will depend upon a variety of factors including the activity of the specific compound employed, the metabolic stability and length of action of that compound, the age, body weight, general health, sex, diet, mode and time of administration, rate of excretion, drug combination, the severity of the particular condition, and the host undergoing therapy.

The compounds of the present invention may be administered by conventional routes of administration, including parenteral (e.g., intramuscular, intrapentoneal, intravenous, ICV, intracisternal injection or infusion, subcutaneous injection, or implant),

oral, by inhalation spray, nasal, vaginal, rectal, sublingual, or topical routes of administration.

The compounds according to the present invention are further useful in a method for the prevention, treatment, control, amelioration, or reduction of risk of the
5 aforementioned diseases, disorders and conditions in combination with other agents.

The compounds of the present invention may be used in combination with one or more other drugs in the treatment, prevention, control, amelioration, or reduction of risk of diseases or conditions for which compounds of Formula I or the other drugs may have utility, where the combination of the drugs together are safer or more effective than
10 either drug alone. Such other drug(s) may be administered, by a route and in an amount commonly used therefore, contemporaneously or sequentially with a compound of Formula I. When a compound of formula I is used contemporaneously with one or more other drugs, a pharmaceutical composition in unit dosage form containing such other drugs and the compound of formula I is preferred. However, the combination therapy
15 may also include therapies in which the compound of formula I and one or more other drugs are administered on different overlapping schedules. It is also contemplated that when used in combination with one or more other active ingredients, the compounds of the present invention and the other active ingredients may be used in lower doses than when each is used singly. Accordingly, the pharmaceutical compositions of the present
20 invention include those that contain one or more other active ingredients, in addition to a compound of formula I, an N-oxide, a prodrug or a salt thereof. The above combinations include combinations of a compound of the present invention not only with one other active compound, but also with two or more other active compounds.

Likewise, compounds of the present invention may be used in combination with
25 other drugs that are used in the prevention, treatment, control, amelioration, or reduction of risk of the diseases or conditions for which compounds of the present invention are useful. Such other drugs may be administered, by a route and in an amount commonly used therefore, contemporaneously or sequentially with a compound of the present invention. When a compound of the present invention is used contemporaneously with
30 one or more other drugs, a pharmaceutical composition containing such other drugs in addition to the compound of the present invention is preferred. Accordingly, the

pharmaceutical compositions of the present invention include those that also contain one or more other active ingredients, in addition to a compound of the present invention.

The weight ratio of the compound of the compound of the present invention to the second active ingredient may be varied and will depend upon the effective dose of each ingredient. Generally, an effective dose of each will be used. Thus, for example, when a compound of the present invention is combined with another agent, the weight ratio of the compound of the present invention to the other agent will generally range from about 1000:1 to about 1:1000, preferably about 200:1 to about 1:200. Combinations of a compound of the present invention and other active ingredients will generally also be within the aforementioned range, but in each case, an effective dose of each active ingredient should be used. In such combinations the compound of the present invention and other active agents may be administered separately or in conjunction. In addition, the administration of one element may be prior to, concurrent to, or subsequent to the administration of other agent(s).

The present invention also relates to pharmaceutical compositions (i.e. medicaments) which comprise at least one compound of the present invention and, where appropriate, one or more suitable excipients.

These excipients/drug carriers are chosen according to the pharmaceutical form and the desired mode of administration.

The compounds of the present invention can be used to manufacture pharmaceutical compositions for parenteral (e.g., intramuscular, intrapentoneal, intravenous, ICV, intracisternal injection or infusion, subcutaneous injection, or implant), oral, sublingual, intratracheal, intranasal, topical, transdermal, vaginal or rectal administration, and be administered to animals or humans in unit dose forms, mixed with conventional pharmaceutical carriers, for the prophylaxis or treatment of the above impairments or diseases.

In the pharmaceutical compositions, the at least one compound of the present invention may be formulated alone or together with further active compounds, in suitable dosage unit formulations containing conventional excipients, which generally are non-toxic and/or pharmaceutically acceptable. Carriers or excipients can be solid, semisolid or liquid materials which serve as vehicles, carriers or medium for the active compound. Suitable excipients are listed in the specialist medicinal monographs. In addition, the

formulations can comprise pharmaceutically acceptable carriers or customary auxiliary substances, such as glidants; wetting agents; emulsifying and suspending agents; preservatives; antioxidants; antiirritants; chelating agents; coating auxiliaries; emulsion stabilizers; film formers; gel formers; odor masking agents; taste corrigents; resin;
5 hydrocolloids; solvents; solubilizers; neutralizing agents; diffusion accelerators; pigments; quaternary ammonium compounds; refatting and overfatting agents; raw materials for ointments, creams or oils; silicone derivatives; spreading auxiliaries; stabilizers; sterilants; suppository bases; tablet auxiliaries, such as binders, fillers, glidants, disintegrants or coatings; propellants; drying agents; opacifiers; thickeners; waxes; plasticizers and white
10 mineral oils. A formulation in this regard is based on specialist knowledge as described, for example, in Fiedler, H. P., Lexikon der Hilfsstoffe für Pharmazie, Kosmetik und angrenzende Gebiete [Encyclopedia of auxiliary substances for pharmacy, cosmetics and related fields], 4th edition, Aulendorf: ECV-Editio-Kantor-Verlag, 1996.

Suitable unit dose forms include forms for oral administration, such as tablets,
15 gelatin capsules, powders, granules and solutions or suspensions for oral intake, forms for sublingual, buccal, intratracheal or intranasal administration, aerosols, implants, forms of subcutaneous, intramuscular or intravenous administration and forms of rectal administration.

The compounds of the invention can be used in creams, ointments or lotions for
20 topical administration.

If a solid composition is prepared in the form of tablets, the main ingredient is mixed with a pharmaceutical carrier such as gelatin, starch, lactose, magnesium stearate, talc, silicon dioxide or the like.

The tablets may be coated with sucrose, a cellulose derivative or another suitable
25 substance or be treated otherwise in order to display a prolonged or delayed activity and in order to release a predetermined amount of the active basic ingredient continuously.

A preparation in the form of gelatin capsules is obtained by mixing the active ingredient with an extender and taking up the resulting mixture in soft or hard gelatin capsules.

30 A preparation in the form of a syrup or elixir or for administration in the form of drops may comprise active ingredients together with a sweetener, which is preferably

calorie-free, methylparaben or propylparaben as antiseptics, a flavoring and a suitable coloring.

The water-dispersible powders or granules may comprise the active ingredients mixed with dispersants, wetting agents or suspending agents such as
5 polyvinylpyrrolidones, and sweeteners or taste improvers.

Rectal administration is achieved by the use of suppositories which are prepared with binders which melt at the rectal temperature, for example cocobutter or polyethylene glycols. Parenteral administration is effected by using aqueous suspensions, isotonic salt solutions or sterile and injectable solutions which comprise
10 pharmacologically suitable dispersants and/or wetting agents, for example propylene glycol or polyethylene glycol.

The active basic ingredient may also be formulated as microcapsules or liposomes/centrosomes, if suitable with one or more carriers or additives.

In addition to the compounds of the general formula I, their prodrugs, their N-
15 oxides, their tautomers, their hydrates or their pharmaceutically suitable salts, the compositions of the invention may comprise further active basic ingredients which may be beneficial for the treatment of the impairments or diseases indicated above.

The present invention thus further relates to pharmaceutical compositions in which a plurality of active basic ingredients are present together, where at least one thereof is a
20 compound of the invention.

When producing the pharmaceutical compositions, the compounds according to the invention are optionally mixed or diluted with one or more carriers.

The following examples are intended for further illustration of the present invention.

25 The compounds were either characterized via ^1H NMR in d_6 -dimethylsulfoxid, deuteromethanol or deuteriochloroform, if not stated otherwise, on a 400 MHz, 500 MHz, or 600 MHz NMR instrument (Bruker AVANCE), or by mass spectrometry, generally recorded via HPLC-MS in a fast gradient on C18-material (electrospray-ionisation (ESI) mode), or melting point.

30

The magnetic nuclear resonance spectral properties (NMR) refer to the chemical shifts (δ) expressed in parts per million (ppm). The relative area of the shifts in the ^1H

NMR spectrum corresponds to the number of hydrogen atoms for a particular functional type in the molecule. The nature of the shift, as regards multiplicity, is indicated as singlet (s), broad singlet (s. br.), doublet (d), broad doublet (d br.), triplet (t), broad triplet (t br.), quartet (q), quintet (quint.) and multiplet (m).

20 Intermediates

I. Pyrimidyl-piperazine building block

I.1 2-tert-Butyl-4-(2-methoxy-ethyl)-6-piperazin-1-yl-pyrimidine

25 I.1.1 5-Methoxy-3-oxo-pentanoic acid methyl ester

To a solution of 3-methoxy propionyl chloride (51.7 g, 359 mmol) and pyridine (87 mL, 1077 mmol) in DCM (400 mL), dimedon (44 g, 359 mmol) was added dropwise at 0 °C to 10 °C. The reaction mixture was stirred overnight at room temperature, 1 N HCl (400 mL) was added, extracted with DCM (500 mL × 3). The organic layer was
30 washed with water, dried over Na₂SO₄, filtered, and concentrated to dryness. The oily residue was dissolved in MeOH (400 mL) and refluxed for 2 hrs. The reaction mixture

was concentrated to dryness. The residue was purified by silica gel column (PE : EA = 15 : 1) to give the title compound (27 g, 47.0 % yield) as white oil.

¹H NMR (400 MHz CDCl₃): δ 3.72 (s, 3H), 3.65-3.62 (m, 2H), 3.49 (s, 2H), 3.31 (s, 3H), 2.78-2.75 (m, 2H).

5

I.1.2 2-tert-Butyl-6-(2-methoxy-ethyl)-pyrimidin-4-ol

5-Methoxy-3-oxo-pentanoic acid methyl ester (27 g, 169 mmol) and tert-butyl amidinium hydrochloride (18.57 g, 185 mmol) were dissolved in MeOH (200 mL); sodium methanolate (27.3 g, 506 mmol) was added in portions to the solution at 10 °C.

10 The reaction mixture was then stirred at room temperature overnight. The reaction mixture was concentrated to half the volume, filtered, the filtrate was acidified with 1 N HCl to pH = 5, the precipitate was collected by filtration, which was dried under high vacuum to give the title compound (20 g, 56 % yield) as white oil.

¹H NMR (400 MHz CDCl₃): δ 11.91 (s, 1H), 6.19 (s, 1H), 3.73-3.71 (m, 2H),
15 3.34 (s, 3H), 2.79-2.75 (m, 2H), 1.37 (s, 9H).

I.1.3 2-tert-Butyl-4-chloro-6-(2-methoxy-ethyl)-pyrimidine

To a solution of 2-tert-butyl-6-(2-methoxy-ethyl)-pyrimidin-4-ol (20 g, 95 mmol) in toluene (200 mL) and DMF (2 mL) was added dropwise POCl₃ (36.5 g, 238 mmol) in
20 an ice bath. The mixture was stirred for 3 hrs at room temperature. The reaction mixture was poured into water, extracted with DCM (400 mL × 3). The organic layer was dried over Na₂SO₄ and concentrated to give the title compound (20 g, 92 % yield) as a yellow oil.

¹H NMR (400 MHz CDCl₃): δ 7.02 (s, 1H), 3.78-3.75 (m, 2H), 3.33 (s, 3H),
25 2.96-2.93 (m, 2H), 1.36 (s, 9H).

I.1.4 2-tert-Butyl-4-(2-methoxy-ethyl)-6-piperazin-1-yl-pyrimidine

A solution of piperazine (45.2 g, 525 mmol) in ethanol (300 mL) was heated to reflux. A solution of 2-tert-butyl-4-chloro-6-(2-methoxy-ethyl)-pyrimidine (20 g, 87
30 mmol) in ethanol (50 mL) was added dropwise to the above solution. The solution was refluxed for another 3 hrs, cooled to room temperature. Then water was added and the organic layer was extracted with EA (400 mL × 3). To the organic layer was added 5 %

citric acid (1 L), separated, and the aqueous layer was collected and adjusted to alkaline pH > 8 with 2 N NaOH. The alkaline aqueous layer was extracted with EA (400 mL × 3), and the organic phase was dried over Na₂SO₄, filtered and concentrated to give the title compound (20 g, 82 % yield) as a yellow oil.

5 ¹H NMR (CDCl₃ 400 MHz): δ 6.17 (s, 1H), 3.76-3.73 (m, 2H), 3.60-3.57 (m, 4H), 3.33 (s, 3H), 2.93-2.90 (m, 4H), 2.83-2.80 (m, 2H), 1.72-1.70 (m, 1H), 1.31 (s, 9H).

LC-MS (ESI): m/z 279 (M+H)⁺.

10 II. Aldehyde building block

II.1 [3-(2-Oxo-ethyl)-cyclobutyl]-carbamic acid tert-butyl ester

II.1.1 (3-tert-Butoxycarbonylamino-cyclobutylidene)-acetic acid methyl ester

15 To a solution of (3-oxo-cyclobutyl)-carbamic acid tert-butyl ester (5.6 g, 30.2 mmol) in anhydrous toluene (100 mL) was added methyl (triphenylphosphoranylidene)-acetate (10.7 g, 45.4 mmol) and heated to reflux overnight under N₂. After cooling to room temperature, the mixture was poured into water and extracted with EA. The organic phase was dried over Na₂SO₄, concentrated under reduced pressure to give a residue, which was purified by column chromatography on silica gel (eluted with PE:EA = 20:1) to give the title compound (7 g, yield 96 %) as a white solid.

20 ¹H NMR (400 MHz, CDCl₃): δ 5.71 (s, 1H), 4.86 (br, 1H), 4.25 (br, 1H), 3.70 (s, 3H), 3.60 (br, 1H), 3.23-3.18 (br, 1H), 2.97-2.92 (br, 1H), 2.79-2.73 (br, 1H), 1.46 (s, 9H).

25

II.1.2 (3-tert-Butoxycarbonylamino-cyclobutyl)-acetic acid methyl ester

 To a solution of (3-tert-butoxycarbonylamino-cyclobutylidene)-acetic acid methyl ester (7 g, 29 mmol) in methanol (100 mL) was added Pd/C (5 g) and stirred at room temperature under H₂ balloon overnight. After TLC showed the reaction was completed, the mixture was filtered over Celite. The filtrate was concentrated under reduced pressure to give the title compound (7 g, yield 99 %) as a white solid, which was used for the next step directly without further purification.

30

II.1.3 3-(2-Hydroxy-ethyl)-cyclobutyl]-carbamic acid tert-butyl ester

To a solution of (3-tert-butoxycarbonylamino-cyclobutyl)-acetic acid methyl ester (7 g, 28.8 mmol) in anhydrous THF (100 mL) was added LiAlH₄ (2.18 g, 57.5 mmol) dropwise at 0°C and the mixture was stirred at 0°C for 2 hrs. The mixture was quenched with water (2 mL), NaOH solution (0.5 N, 2 mL) and water (2 mL), filtered and extracted with EA. The organic phase was washed by brine, dried over Na₂SO₄, filtered and concentrated under reduced pressure to give the title compound (5.7 g, yield 92 %) as a white solid, which was used for next step directly without further purification.

10

II.1.4 [3-(2-Oxo-ethyl)-cyclobutyl]-carbamic acid tert-butyl ester

To a solution of 3-(2-hydroxy-ethyl)-cyclobutyl]-carbamic acid tert-butyl ester (5.2 g, 24.1 mmol) in anhydrous DCM (100 mL) was added Dess-Martin periodinane (20.5 g, 48.3 mmol) and stirred at room temperature for 5 hrs. The mixture was quenched with Na₂S₂O₃ solution, extracted with DCM. The organic phase was concentrated under reduced pressure to give a residue, which was purified by column chromatography on silica gel (eluted with PE:EA = 5:1) to give the title compound (2.7 g, yield 52%) as an oily liquid.

20

EXAMPLE 1:

trans-N-[4-(2-{4-[2-tert-Butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclohexyl]-acetamide (compound 1)

25

1.1 Trans-[4-(2-{4-[2-tert-Butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclohexyl]-carbamic acid tert-butyl ester

A mixture of 2-tert-butyl-4-(2-methoxy-ethyl)-6-piperazin-1-yl-pyrimidine (500 mg, 1.796 mmol), trans-[4-(2-oxo-ethyl)-cyclohexyl]-carbamic acid tert-butyl ester (433 mg, 1.796 mmol) and AcOH (108 mg, 1.796 mmol) in DCE (30 ml) was stirred at room temperature for 10 min. Sodium triacetoxhydroborate (571 mg, 2.69 mmol) was added. After 4 h, water was added. The aqueous layer was extracted with ethyl acetate (3 x 5 mL). The combined organic layers were washed with brine, dried over Na₂SO₄, filtered,

30

and concentrated under reduced pressure to give the yellow title compound (900 mg, 1.680 mmol, 94 % yield) which was used next step without purification.

LC-MS: $m/z = 504$ (M+H).

- 5 1.2 trans-4-(2-{4-[2-tert-Butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclohexylamine

Trans-[4-(2-{4-[2-tert-Butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclohexyl]-carbamic acid tert-butyl ester (900 mg, 1.680 mmol) was dissolved in 4 M HCl/MeOH (25 ml). The resulting solution was stirred at about 25°C for about 16
10 h. The solvent was removed under reduced pressure to provide the title compound (690 mg, 1.539 mmol, 92 % yield) as a colorless solid, which was used in the next step without further purification.

LC-MS: $m/z = 404.0$ (M+H).

- 15 1.3 trans-N-[4-(2-{4-[2-tert-Butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclohexyl]-acetamide

A mixture of acetyl chloride (181 mg, 2.308 mmol), trans-4-(2-{4-[2-tert-Butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclohexylamine (690 mg, 1.539 mmol) and triethylamine (778 mg, 7.69 mmol) in DCM (15 ml) was stirred at
20 room temperature for about 3 h. The solution was concentrated to dryness. The residue was transferred neat onto a 50 x 250 mm silica gel column and eluted with 5% MeOH/CH₂Cl₂. Fractions were collected and the solvent removed under reduced pressure to provide the title compound (468 mg, 1.040 mmol, 67.6 % yield) as a white powder.

25 LC-MS: $m/z = 446.3$ (M+H).

¹H NMR (400MHz, CDCl₃): δ 6.19 (s, 1H), 5.32 (d, J = 8.0 Hz, 1H), 3.77-6.63 (m, 7H), 3.34 (s, 3H), 2.84-2.81 (m, 2H), 2.50-2.36 (m, 6H), 1.98-1.95 (m, 5H), 1.79-1.77 (m, 2H), 1.46-1.41 (m, 2H), 1.32 (s, 1H), 1.24-1.06 (m, 5H).

30 EXAMPLE 2:

trans-N-[4-(2-{4-[2-tert-butyl-6-(methoxymethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclohexyl]-acetamide (compound 2)

The title compound was prepared following the same way shown above but using commercially available methyl-4-methoxy-acetoacetate instead of 5-methoxy-3-oxo-pentanoic acid methyl ester.

LC-MS: m/z = 432.1 (M+H).

5 ^1H NMR (400MHz, CDCl_3): δ 6.44 (s, 1H), 5.22 (d, 1H), 4.39 (s, 2H), 3.68 (m, broad, 5H), 3.48 (s, 3H), 2.48 (m, broad, 4H), 2.37 (m, 2H), 1.98 (m, 2H), 1.95 (s, 3H), 1.78 (m, 2H), 1.44 (m, 2H), 1.32 (s, 9H), 1.24 (m, 1H), 1.03-1.14 (m, 4H).

EXAMPLE 3:

10 cis-N-[4-(2-{4-[2-tert-Butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclohexyl]-acetamide (compound 3)

The title compound was prepared following the same way shown above but using commercially available cis-[4-(2-oxo-ethyl)-cyclohexyl]-carbamic acid tert-butyl ester.

LC-MS: m/z = 446.3 (M+H).

15 ^1H NMR (400MHz, CDCl_3): δ 6.12 (s, 1H), 5.53 (s, broad, 1H), 3.93 (s, broad, 1H), 3.69 (t, 2H), 3.57 (broad, 4H), 3.27 (s, 3H), 2.75 (t, 2H), 2.42 (m, 4H), 2.30 (m, 2H), 1.91 (s, 3H), 1.54 (m, 6H), 1.40 (m, 3H), 1.25 (s, 9H), 1.16 (m, 2H).

EXAMPLE 4:

20 cis-N-[3-(2-{4-[2-tert-Butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclobutyl]-acetamide trifluoroacetate (compound 4a) and trans-N-[3-(2-{4-[2-tert-Butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclobutyl]-acetamide trifluoroacetate (compound 4b)

N-[3-(2-{4-[2-tert-Butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclobutyl]-acetamide trifluoroacetate was prepared following the same way shown above, where in the final step the free amine was coupled with acetic anhydride. The diastereomeric mixture was separated via chiral HPLC to yield cis-N-[3-(2-{4-[2-tert-butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclobutyl]-acetamide trifluoroacetate (compound 4a) and trans-N-[3-(2-{4-[2-tert-Butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclobutyl]-acetamide trifluoroacetate (compound 4b).

25

30

Compound 4a: cis-N-[3-(2-{4-[2-tert-Butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclobutyl]-acetamide trifluoroacetate

¹H NMR (400 MHz, D₂O): δ 6.72 (s, 1H), 5.24-5.20 (br, 1H), 4.28-4.25 (br, 1H),
5 3.95-3.89 (m, 1H), 3.69-3.53 (m, 5H), 3.38-3.32 (m, 1H), 3.26 (s, 3H), 3.10-3.01 (m,
4H), 2.96-2.93 (m, 2H), 2.41-2.34 (m, 2H), 1.94-1.90 (m, 1H), 1.88 (s, 3H), 1.87-1.74
(m, 2H), 1.52-1.46 (m, 2H), 1.29 (s, 9H).

LC-MS (ESI): m/z 418 (M+H)⁺, RT: 2.840 min.

10 Compound 4b: trans-N-[3-(2-{4-[2-tert-Butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclobutyl]-acetamide trifluoroacetate

¹H NMR (400 MHz, D₂O): δ 6.72 (s, 1H), 5.25-5.21 (br, 1H), 4.29-4.26 (br, 1H),
4.16-4.12 (m, 1H), 3.70-3.54 (m, 5H), 3.39-3.31 (m, 1H), 3.27 (s, 3H), 3.07-3.03 (m,
15 4H), 2.97-2.94 (m, 2H), 2.20-2.16 (m, 1H), 2.06-1.96 (m, 4H), 1.89-1.84 (m, 5H), 1.29
(s, 9H).

LC-MS (ESI): m/z 418.3 (M+H)⁺, RT: 2.842 min

EXAMPLE 5:

20 trans-N-[4-(2-{(2R)-4-[2-tert-Butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-2-methyl-piperazin-1-yl}-ethyl)-cyclohexyl]-acetamide (compound 5)

The title compound was prepared following the same way shown above but using commercially available chiral 1-N-BOC-2-methylpiperazine as amine building block.

¹H NMR (400 MHz, MeOD): δ 6.41 (s, 1H), 4.12-4.05 (m, 2H), 3.73 (s, 2H),
25 3.72-3.70 (d, J = 8, 1H), 3.57 (s, 3H), 3.25 (s, 1H), 2.98-2.95 (m, 2H), 2.84-2.80 (m,
3H), 2.37 (s, 1H), 2.34 (s, 2H), 1.89-1.80 (m, 7H), 1.43-1.41 (m, 2H), 1.31 (s, 9H),
1.22-1.07 (m, 8H).

EXAMPLE 6:

30 trans-N-[4-(2-{(3R)-4-[2-tert-Butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-3-methyl-piperazin-1-yl}-ethyl)-cyclohexyl]-acetamide (compound 6)

The title compound was prepared following the same way shown above.

¹H NMR (400 MHz, MeOD): δ 6.34 (s, 1H), 4.83 (s, 1H), 4.21-4.18 (d, J = 12, 1H), 3.73 (s, 2H), 3.71-3.70 (d, J = 4, 1H), 3.57 (s, 3H), 3.32-3.30 (m, 1H), 3.10 (s, 1H), 2.93-2.85 (m, 3H), 2.83-2.80 (m, 2H), 2.16-2.14 (d, J = 8, 1H), 1.90 (s, 1H), 1.84-1.81 (d, J = 12, 7H), 1.45-1.44 (d, J = 4, 2H), 1.31 (s, 9H), 1.25-1.08 (m, 8H).

5

EXAMPLE 7:

cis-N-[4-(2-((2S)-4-[2-tert-Butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-2-methylpiperazin-1-yl)-ethyl)-cyclohexyl]-acetamide (compound 7)

The title compound was prepared following the same way shown above.

10 ¹H NMR (400 MHz, CDCl₃): δ 6.4 (s, 1H), 4.08-4.05 (m, 2H), 3.85 (s, 1H), 3.73 (m, 2H), 3.72-3.70 (m, 5H), 3.23-3.30 (m, 2H), 2.84-2.82 (m, 3H), 2.82-2.80 (m, 1H), 2.38 (m, 2H), 1.93 (s, 3H), 1.60 (m, 11H), 1.31 (s, 9H), 1.14-1.12 (m, 3H).

EXAMPLE 8:

15 trans-N-[4-(2-((3S)-4-[2-tert-Butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-3-methylpiperazin-1-yl)-ethyl)-cyclohexyl]-acetamide (compound 8)

The title compound was prepared following the same way shown above.

¹H NMR (400 MHz, CDCl₃): δ 6.4 (s, 1H), 4.63 (s, 1H), 4.2 (s, 1H), 3.73-3.69 (m, 2H), 3.32-3.31 (m, 1H), 3.31-3.30 (m, 6H), 3.30 (m, 1H), 2.90-2.87 (m, 1H), 2.84-2.82 (m, 1H), 2.82-2.80 (m, 2H), 1.89-1.87 (m, 2H), 1.87-1.81 (m, 1H), 1.81-1.80 (s, 7H), 1.45-1.43 (s, 3H), 1.30 (s, 9H), 1.25-1.11 (m, 7H).

20

EXAMPLE 9:

25 trans-N-[4-(2-((2S)-4-[2-tert-Butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-2-methylpiperazin-1-yl)-ethyl)-cyclohexyl]-acetamide (compound 9)

The title compound was prepared following the same way shown above.

¹H NMR (400MHz, MeOD): δ 6.40 (s, 1H), 4.12-4.04 (m, 2H), 3.73-3.70 (m, 2H), 3.57 (m, 1H), 3.32-3.23 (m, 3H), 2.97-2.94 (m, 1H), 2.93-2.83 (m, 2H), 2.83-2.80 (m, 3H), 1.89-1.88 (m, 1H), 1.87-1.80 (m, 2H), 1.43-1.41 (s, 5H), 1.41-1.40 (m, 3H), 1.32-1.31 (m, 2H), 1.30 (s, 9H), 1.26-1.10 (m, 8H).

30

LC-MS (ESI): m/z 460 (M+H)⁺, RT: 1.972 min

EXAMPLE 10:

cis-N-[4-(2-{4-[2-tert-Butyl-6-(2-trifluoromethoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclohexyl]-acetamide (compound 10a) and trans-N-[4-(2-{4-[2-tert-Butyl-6-(2-trifluoromethoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclohexyl]-acetamide (compound 10b)

10.1 2-tert-Butyl-4-(2-hydroxy-ethyl)-6-piperazin-1-yl-pyrimidine

To the solution of 2-tert-Butyl-4-(2-methoxy-ethyl)-6-piperazin-1-yl-pyrimidine (2.78 g, 9.99 mmol) in DCM (150 mL) was added BBr₃ (3.75 g, 14.98 mmol) at 0°C. Then the mixture was stirred overnight at room temperature. The mixture was quenched with saturated aqueous NaHCO₃ solution. The organic phase was separated out and dried over Na₂SO₄, filtered and concentrated. The crude title compound was used in the next step without any further purification.

10.2 4-[2-tert-Butyl-6-(2-hydroxy-ethyl)-pyrimidin-4-yl]-piperazine-1-carboxylic acid benzyl ester

To a solution of 2-tert-Butyl-4-(2-hydroxy-ethyl)-6-piperazin-1-yl-pyrimidine (5.1 g, 19.29 mmol) and N,N-diisopropylethylamine (7.48 g, 57.9 mmol) in THF (150 mL) was added benzyl chloroformate (CbzCl, 3.29 g, 19.29 mmol) dropwise at 0°C. The resulting mixture was stirred at room temperature overnight. The mixture was diluted with EA, washed with water, brine, dried over Na₂SO₄, filtered and concentrated to afford the crude title compound as an oil which was purified by column chromatography to afford the product (2.3 g, yield 29%) as a yellow oil.

LC-MS(ESI⁺): m/z 399 (M+H)⁺

10.3 4-[2-tert-Butyl-6-(2-methylsulfanylthiocarboxy-ethyl)-pyrimidin-4-yl]-piperazine-1-carboxylic acid benzyl ester

To the solution of 4-[2-tert-butyl-6-(2-hydroxy-ethyl)-pyrimidin-4-yl]-piperazine-1-carboxylic acid benzyl ester (2.3 g, 5.77 mmol) in THF (12 mL) was added NaH (0.300 g, 7.50 mmol) at 0°C. Then the mixture was stirred for 1 h at room temperature. CS₂ (0.879 g, 11.54 mmol) was added to the above solution dropwise at 0°C. After the addition, the resulting mixture was stirred at room temperature overnight. The mixture

was cooled to 0°C again and iodomethane (0.983 g, 6.93 mmol) was added to the above solution dropwise. The resulting mixture was stirred at room temperature for 2 hrs. The mixture was poured into aqueous NH₄Cl solution and the mixture was extracted with EA. The combined organic phase was dried over Na₂SO₄, filtered and concentrated. The residue was purified by column chromatography on silica gel to afford the title compound (1 g, 35%) as a yellow oil.

¹H NMR (400MHz CDCl₃): δ 1.31 (s, 9H), 2.52 (s, 3H), 3.08 (m, 2H), 3.65 (m, 8H), 4.97 (m, 2H), 5.17 (s, 2H), 6.19 (s, 1H), 7.37 (m, 5H).

10.4 4-[5-Bromo-2-tert-butyl-6-(2-trifluoromethoxy-ethyl)-pyrimidin-4-yl]-piperazine-1-carboxylic acid benzyl ester

To the solution of 1,3-dibromo-5,5-dimethyl-hydantoin (DBH, 1.12 g, 4.11 mmol) in DCM (41 mL) was added HF/pyridine (2.8 mL, 112 mmol) at -78°C dropwise. After the addition was complete, the mixture was stirred vigorously for 5 min. Then the solution of 4-[2-tert-butyl-6-(2-methylsulfanylthiocarboxy-ethyl)-pyrimidin-4-yl]-piperazine-1-carboxylic acid benzyl ester (670 mg, 1.371 mmol) in DCM (4.1 mL) was added to the above solution dropwise at -78°C. After the addition, the acetone-dry ice bath was replaced with ice-cold NaCl solution and the mixture was stirred for 30 min. Then the mixture was quenched with saturated aqueous NaHCO₃ solution until the red-brown color disappeared. The resulting mixture was extracted with DCM, dried over Na₂SO₄, filtered and concentrated. The residue was purified by column chromatography to afford the title compound (120 mg, 16%) as a pink oil.

¹H NMR (400 MHz, CDCl₃): δ 1.31 (s, 9H), 3.28 (m, 2H), 3.65 (m, 8H), 4.50 (m, 2H), 5.16 (s, 2H), 7.37 (m, 5H).

25

10.5 2-tert-Butyl-4-piperazin-1-yl-6-(2-trifluoromethoxy-ethyl)-pyrimidine

To the solution of 4-[5-bromo-2-tert-butyl-6-(2-trifluoromethoxy-ethyl)-pyrimidin-4-yl]-piperazine-1-carboxylic acid benzyl ester (26 mg, 0.048 mmol) in EA (3 mL) was added Pd/C (10.15 mg). Then the mixture was stirred for 40 min under H₂ (15 psi) atmosphere. Then the mixture was concentrated and the residue was used in the next step directly.

LC-MS (ESI): m/z 332 (M+H)⁺

30

10.6 cis N-[4-(2-{4-[2-tert-Butyl-6-(2-trifluoromethoxy-ethyl)-pyrimidin-4-yl]-
piperazin-1-yl}-ethyl)-cyclohexyl]-acetamide and trans N-[4-(2-{4-[2-tert-Butyl-6-
(2-trifluoromethoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclohexyl]-
5 acetamide

The solution of 2-tert-butyl-4-piperazin-1-yl-6-(2-trifluoromethoxy-ethyl)-
pyrimidine (200 mg, 0.602 mmol) in MeOH (5 mL) was basified to pH=9 with
trimethylamine and then the solution was acidified to pH=5 with acetic acid again. To
the this solution was added N-(4-(2-oxoethyl)cyclohexyl)acetamide (165 mg, 0.903
10 mmol). The mixture was stirred for 40 min. Then NaCNBH₃ (56.7 mg, 0.903 mmol) was
added to the above solution. The mixture was stirred at room temperature overnight.
The mixture was quenched with water and concentrated. The residue was extracted with
EA. The organic phase was dried over Na₂SO₄, filtered and concentrated. The residue
was purified by Prep-HPLC to afford the pure product which was further purified with
15 SFC to afford the 2 diastereomeric products: compound 10a, cis N-[4-(2-{4-[2-tert-
Butyl-6-(2-trifluoromethoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclohexyl]-
acetamide (3 mg) and compound 10b, trans N-[4-(2-{4-[2-tert-Butyl-6-(2-
trifluoromethoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclohexyl]-acetamide (15
mg).

20 Compound 10a, cis N-[4-(2-{4-[2-tert-Butyl-6-(2-trifluoromethoxy-ethyl)-
pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclohexyl]-acetamide:

¹H NMR (400 MHz, MeOD): δ 1.41 (s, 9H), 1.43 (m, 3H), 1.58 (m, 7H), 1.89 (s,
3H), 2.46 (m, 2H), 2.58 (m, 4H), 2.95 (m, 2H), 3.71 (m, 4H), 3.85 (m, 1H), 4.39 (m,
2H), 4.57 (m, 1H), 6.44 (s, 1H).

25

Compound 10b, trans N-[4-(2-{4-[2-tert-Butyl-6-(2-trifluoromethoxy-ethyl)-
pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclohexyl]-acetamide:

¹H NMR (400 MHz, MeOD): δ 1.12 (m, 5H), 1.37 (s, 9H), 1.67 (m, 3H), 1.81 (m,
3H), 1.90 (m, 6H), 2.21 (m, 1H), 2.22 (m, 1H), 3.01 (m, 2H), 3.16 (m, 2H), 3.57 (m,
30 1H), 3.58 (m, 1H), 3.64 (m, 1H), 3.85 (m, 2H), 4.44 (m, 2H), 6.62 (s, 1H).

EXAMPLE 11:

trans-N-[4-(2-{4-[2-tert-Butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclohexyl]-formamide (compound 11)

The title compound was prepared following the procedure of example 1 except that in the last step ethyl formate was used instead of acetyl chloride.

5 LC-MS: m/z = 432.3 (M+H).

^1H NMR (600 MHz, CDCl_3): δ 8.1 (m, 1H), 6.19 (s, 1H), 5.37 (m, 1H), 3.83 (m, 1H), 3.77 (m, 3H), 3.64 (m, 4H), 3.34 (s, 3H), 2.83 (t, 2H), 2.49 (s, broad, 4H), 2.39 (m, 2H), 2.00 (m, 2H), 1.81 (m, 2H), 1.44 (m, 2H), 1.32 (s, 9H), 1.27 (m, 1H), 1.0-1.2 (m, 3H).

10

EXAMPLE 12:

N-[3-(2-{4-[2-tert-Butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclobutyl]-formamide trifluoroacetate (compound 12)

15 The title compound was prepared following the procedure of example 1 except that in the last step acetic formic anhydride was used instead of acetyl chloride as described below:

A solution of 3-[2-[4-[2-tert-butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl]-ethyl)-cyclobutanamine in acetic formic anhydride (2 mL) was heated at 80 °C overnight. After cooling to room temperature, the mixture was poured into ice-water and basified by addition of aq. NaOH solution (5 N) to pH = 12 and then extracted with EA. The organic layer was concentrated under reduced pressure to give a residue, which was purified by pre-HPLC to give the desired product as an oil.

20

LC-MS (ESI): m/z 404 (M+H)⁺.

25 ^1H NMR (400 MHz, MeOD): δ 7.94-7.91 (d, J = 12.4 Hz, 1H), 7.03-7.02 (d, J = 3.2 Hz, 1H), 4.47-4.45 (m, 1H), 4.25-4.21 (m, 3H), 3.75-3.72 (m, 2H), 3.48 (s, 4H), 3.35 (s, 3H), 3.13-3.07 (m, 4H), 2.53-2.50 (m, 2H), 2.17-2.15 (m, 2H), 2.00-1.91 (m, 3H), 1.89-1.66 (m, 1H), 1.44 (s, 9H).

EXAMPLE 13:

30 trans-N-[4-(2-{4-[2-tert-Butyl-6-(2-hydroxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclohexyl]-acetamide (compound 13)

50 mg of trans-N-[4-(2-{4-[2-tert-butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclohexyl]-acetamide from example 1 were dissolved in 5 mL of dichloromethane. At -20°C, 1.122 mL of 1 M BBr₃ in dichloromethane was added dropwise. The reaction mixture was allowed to warm to room temperature and to stir overnight. Water was added, the organic phase removed and the aqueous phase adjusted to pH 7 with 5% aqueous sodium bicarbonate solution. Ethyl acetate was added, the organic layer removed, and the aqueous phase extracted three times with ethyl acetate. The organic layers were combined, dried over Na₂SO₄, filtered and the solvent removed to yield 0.035 mg of crude product which was further purified via silica gel chromatography to yield 0.017 mg of the title compound..

¹H NMR (600 MHz, CDCl₃): δ 6.12 (s, 1H), 5.29 (d, 1H), 3.94 (t, 2H), 3.67 (broad, 5H), 2.78 (m, 2H), 2.50 (s, broad, 4H), 2.40 (m, 2H), 1.98 (m, 2H), 1.96 (s, 3H), 1.77 (m, 2H), 1.44 (m, 2H), 1.32 (s, 9H), 1.22 (m, 2H), 1.09 (m, 4H).

LC-MS (ESI): m/z 432.3 (M+H)⁺.

The following compounds of examples 14 to 31 were prepared by analogy to the aforementioned procedures. The respective stereoisomers were prepared by using starting compounds having the desired stereochemistry.

EXAMPLE 14:

trans-N-[(1R,3S)-3-[2-[4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclopentyl]acetamide (compound 14)

LC-MS (ESI): m/z 432.3 (M+H)⁺.

EXAMPLE 15:

trans-N-[(1S,3R)-3-[2-[4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclopentyl]acetamide (compound 15)

LC-MS (ESI): m/z 432.3 (M+H)⁺.

EXAMPLE 16

cis-N-[(1S,3S)-3-[2-[4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclopentyl]acetamide (compound 16)

LC-MS (ESI): m/z 432.3 (M+H)⁺.

EXAMPLE 17

N-[cis-3-[2-[4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclobutyl]formamide (compound 17)

LC-MS (ESI): m/z 404.3 (M+H)⁺.

EXAMPLE 18

N-[trans-3-[2-[4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclobutyl]formamide (compound 18)

LC-MS (ESI): m/z 404.3 (M+H)⁺.

EXAMPLE 19

trans-N-[4-[2-[(3R)-4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide (compound 19)

LC-MS (ESI): m/z 446.3 (M+H)⁺.

EXAMPLE 20

trans-N-[4-[2-[(3S)-4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide (compound 20)

LC-MS (ESI): m/z 446.3 (M+H)⁺; ¹H-NMR (CDCl₃): 8.1 (s, 1H), 6.15 (s, 1H), 5.3 (d, 1H), 4.55 (m, 1H), 4.15 (m, 1H), 3.85 (m, 1H), 3.8 (t, 2H), 3.35 (s, 3H), 3.13 (m, 1H), 2.7-2.95 (several m, 4H), 2.4 (m, 1H), 2.3 (m, 1H), 2.15 (m, 1H), 2.05 (m, 3H), 1.8 (m, 2H), 1.4 (m, 2H), 1.32 (s, 9H), 1.25 (d, 3H), 1.05-1.3 (several m, 4H).

EXAMPLE 21

trans-N-[4-[2-[4-[2-tert-butyl-6-(methoxymethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]formamide (compound 21)

LC-MS (ESI): m/z 418.3 (M+H)⁺.

EXAMPLE 22

trans-N-[4-[2-[4-[2-tert-butyl-6-(hydroxymethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]acetamide (compound 22)

LC-MS (ESI): m/z 418.3 (M+H)⁺; ¹H-NMR (CDCl₃): 6.17 (s, 1H), 5.25 (d, 1H), 4.55 (s, 2H), 4.12 (broad, 1H), 3.7 (broad 4H), 2.52 (broad, 2H), 2.42 (broad, 1H), 1.99 (m, 2H), 1.96 (s, 3H), 1.79 (m, 2H), 1.6 (broad, 4H), 1.45 (m, 2H), 1.35 (s, 9H), 1.27 (m, 1H), 1.09 (m, 4H).

EXAMPLE 23

trans-N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxyethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]formamide (compound 23)

LC-MS (ESI): m/z 418.3 (M+H)⁺

EXAMPLE 24

trans-N-[4-[2-[(2R)-4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide (compound 24)

LC-MS (ESI): m/z 446.2 (M+H)⁺; ¹H-NMR (CDCl₃): 8.1 (s, 1H), 6.2 (s, 1H), 5.35 (d, 1H), 4.1 (m, 1H), 4.0 (m, 1H), 3.85 (m, 1H), 3.77 (t, 2H), 3.35 (s, 3H), 3.27 (m, 1H), 2.7-3.05 (several m, 5H), 2.5 (m, 1H), 2.35 (m, 2H), 2.0 (m, 2H), 1.8 (m, 2H), 1.4 (m, 2H), 1.32 (s, 9H), 1.05-1.3 (several m, 7H).

EXAMPLE 25

trans-N-[4-[2-[(3S)-4-[2-tert-butyl-6-(2-hydroxyethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide (compound 25)

LC-MS (ESI): m/z 446.3 (M+H)⁺; ¹H-NMR (CDCl₃): 6.11 (s, 1H), 5.25 (d, 1H), 4.56 (m, broad, 1H), 4.18 (m, broad, 1H), 3.94 (m, 2H), 3.7 (m, 1H), 3.2 (m, 1H), 2.94 (m, 1H), 2.83 (m, broad, 2H), 2.42 (m, 1H), 2.32 (m, 1H), 2.2 (m, 1H), 2.05 (m, 1H), 1.99 (m, 2H), 1.96 (s, 3H), 1.8 (m, 2H), 1.62 (m, broad, 3H), 1.43 (m, 2H), 1.34 (s, 9H), 1.28 (m, 3H), 1.08 (m, 4H).

EXAMPLE 26

trans-N-[4-[2-[(2R)-4-[2-tert-butyl-6-(2-hydroxyethyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide (compound 26)

LC-MS (ESI): m/z 446.3 ($M+H$)⁺; ¹H-NMR (CDCl₃): 6.11 (s, 1H), 5.25 (d, 1H), 4.1 (m, broad, 1H), 4.0 (m, broad, 1H), 3.94 (m, 2H), 3.7 (m, 1H), 3.27 (m, 1H), 3.0 (m, 1H), 2.87 (m, 1H), 2.77 (m, 3H), 2.5 (m, 1H), 2.35 (m, 2H), 2.0 (m, 2H), 1.96 (s, 3H), 1.79 (m, 2H), 1.62 (m, broad, 2H), 1.4 (m, 2H), 1.32 (s, 9H), 1.2 (m, 1H), 1.05-1.15 (several m, 5H).

EXAMPLE 27

trans-N-[4-[2-[4-(2-tert-butyl-6-tetrahydrofuran-3-yl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]formamide (compound 27)

LC-MS (ESI): m/z 446.3 ($M+H$)⁺; ¹H-NMR (CDCl₃): 8.1 (s, 1H), 6.18 (s, 1H), 5.3 (s, 1H), 4.1 (m, 1H), 4.05 (m, 1H), 3.92 (m, 1H), 3.88 (m, 1H), 3.65 (m, broad, 3H), 3.3 (m, 1H), 2.5 (m, broad, 3H), 2.4 (m, broad, 2H), 2.22 (m, 2H), 2.02 (m, 2H), 1.82 (m, 2H), 1.6 (m, broad, 6H), 1.45 (m, 2H), 1.3 (s, 9H), 1.28 (m, 1H), 1.15 (m, 3H).

EXAMPLE 28

N-[3-[2-[(3S)-4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclobutyl]formamide (compound 28)

EXAMPLE 29

trans-N-[4-[2-[(3R)-4-[2-tert-butyl-6-(2-hydroxyethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide (compound 29)

LC-MS (ESI): m/z 446.4 ($M+H$)⁺; ¹H-NMR (CDCl₃): 6.08 (s, 1H), 5.52 (m, 0.4H), 5.27 (d, 0.6H), 4.53 (s, broad, 1H), 4.15 (s, broad, 1H), 4.02 (m, 0.4H), 3.94 (m, 2H), 3.72 (m, 0.6H), 3.14 (m, 2H), 2.90 (m, 2H), 2.78 (m, 5H), 2.4 (m, 1H), 2.3 (m, 1H), 2.16 (m, 1H), 1.9-2.05 (m, 5H), 1.8 (m, 1H), 1.55-1.75 (several m, 4H), 1.48 (m, 1H), 1.42 (m, 1H), 1.15-1.3 (several m, 9H), 1.1 (m, 3H).

EXAMPLE 30

trans-N-[3-[2-[(3S)-4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclobutyl]acetamide (compound 30)

LC-MS (ESI): m/z 432.2 ($M+H$)⁺; ¹H-NMR (CDCl₃): 6.15 (s, 1H), 5.55 (m, 1H), 4.55 (m, 1H), 4.25 (m, 1H), 4.15 (m, 1H), 3.8 (t, 2H), 3.35 (s, 3H), 3.1 (m, 1H), 2.7-

2.95 (several m, 4H), 2.55 (m, 2H), 2.1-2.35 (several m, 3H), 2.0 (m, 2H), 1.95 (s, 3H), 1.6 (m, 2H), 1.45 (m, 2H), 1.3 (s, 9H), 1.22 (d, 3H).

EXAMPLE 31

5 cis-N-[3-[2-[(3S)-4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]-3-methyl-piperazin-1-yl]ethyl]cyclobutyl]acetamide (compound 31)

LC-MS (ESI): m/z 432.2 (M+H)⁺; ¹H-NMR (CDCl₃): 6.15 (s, 1H), 5.65 (m, 1H), 4.4-4.6 (m, 2H), 4.15 (m, 1H), 3.75 (t, 2H), 3.35 (s, 3H), 3.15 (m, 1H), 2.7-2.95 (several m, broad, 4H), 2.0-2.4 (m, 9H), 2.0 (s, 3H), 1.7 (m, 2H), 1.35 (s, 9H), 1.25 (s, 10 broad, 3H).

EXAMPLE 32

trans-N-[4-[2-[(3S)-4-[2-tert-butyl-6-[2-(difluoromethoxy)ethyl]pyrimidin-4-yl]-3-methyl-piperazin-1-yl]ethyl]cyclohexyl]acetamide (compound 32)

15 To a solution of N-((1S,4r)-4-(2-((S)-4-(2-(tert-butyl)-6-(2-hydroxyethyl)pyrimidin-4-yl)-3-methylpiperazin-1-yl)ethyl)cyclohexyl)acetamide (200 mg, 0.449 mmol) in acetonitrile was added copper(I) iodide (5.71 mg, 0.03 mmol). After heating to 45°C, 2,2-difluoro-2-(fluorosulfonyl)acetic acid (320 mg, 1.795 mmol) was added with stirring continuing for 1 hour at this temperature. The solution was poured 20 into 10mL of water and extracted with dichloromethane. The combined organic phases were evaporated to dryness to give 270 mg of crude product which was purified via silica gel chromatography using a 40g Reveleris cartridge with dichloromethane/MeOH 0-80% as eluent and subsequently a Chromabond cartridge yielding 2.6 mg of the title compound.

25 LC-MS (ESI): m/z 496.4 (M+H)⁺.

IV. Biological investigations

1. Receptor binding studies:

30 The substance to be tested was either dissolved in methanol/Chremophor® (BASF SE) or in dimethyl sulfoxide and then diluted with water to the desired concentration.

a) Dopamine D₃ receptor:

The assay mixture (0.250 ml) was composed of membranes derived from ~ 10⁶ HEK-293 cells possessing stably expressed human dopamine D₃ receptors, 0.1 nM [¹²⁵I]-iodosulpride and incubation buffer (total binding) or, in addition, test substance (inhibition curve) or 1 μM spiperone (nonspecific binding). Each assay mixture was run in triplicate.

The incubation buffer contained 50 mM tris, 120 mM NaCl, 5 mM KCl, 2 mM CaCl₂, 2 mM MgCl₂ and 0.1% bovine serum albumin, 10 μM quinolone and 0.1% ascorbic acid (prepared fresh daily). The buffer was adjusted to pH 7.4 with HCl.

b) Dopamine D_{2L} receptor:

The assay mixture (1 ml) was composed of membranes from ~ 10⁶ HEK-293 cells possessing stably expressed human dopamine D_{2L} receptors (long isoform) and 0.01 nM [¹²⁵I] iodospiperone and incubation buffer (total binding) or, in addition, test substance (inhibition curve) or 1 μM haloperidol (nonspecific binding). Each assay mixture was run in triplicate.

The incubation buffer contained 50 mM tris, 120 mM NaCl, 5 mM KCl, 2 mM CaCl₂, 2 mM MgCl₂ and 0.1% bovine serum albumin. The buffer was adjusted to pH 7.4 with HCl.

c) Measurement and analysis:

After having been incubated at 25°C for 60 minutes, the assay mixtures were filtered through a Whatman GF/B glass fiber filter under vacuum using a cell collecting device. The filters were transferred to scintillation vials using a filter transfer system. After 4 ml of Ultima Gold® (Packard) have been added, the samples were shaken for one hour and the radioactivity was then counted in a Beta-Counter (Packard, Tricarb 2000 or 2200CA). The cpm values were converted into dpm using a standard quench series and the program belonging to the instrument.

The inhibition curves were analyzed by means of iterative nonlinear regression analysis using the Statistical Analysis System (SAS) which is similar to the "LIGAND" program described by Munson and Rodbard.

In these tests, the compounds according to the invention exhibit very good affinities for the D₃ receptor (< 100 nM, frequently < 50 nM, in particular < 10 nM) and bind selectively to the D₃ receptor.

The results of the binding tests are given in Table 1.

- 5 K_i (D₃): +++ < 10nM, ++ < 50nM, + < 100nM

10 2. Determination of the microsomal half-life:

The metabolic stability of the compounds of the invention was determined in the following assay.

The test substances were incubated in a concentration of 0.5 μ M as follows:

0.5 μ M test substance are preincubated together with liver microsomes from different species (from rat, human or other species) (0.25 mg of microsomal protein/ml) in 0.05 M potassium phosphate buffer of pH 7.4 in microtiter plates at 37°C for 5 min. The reaction is started by adding NADPH (1 mg/mL). After 0, 5, 10, 15, 20 and 30 min, 50 μ l aliquots are removed, and the reaction is immediately stopped and cooled with the same volume of acetonitrile. The samples are frozen until analyzed. The remaining concentration of undegraded test substance is determined by MSMS. The half-life (T1/2) is determined from the gradient of the signal of test substance/unit time plot, it being possible to calculate the half-life of the test substance, assuming first order kinetics, from the decrease in the concentration of the compound with time. The microsomal clearance (mCl) is calculated from $mCl = \ln 2 / T_{1/2} / (\text{content of microsomal protein in mg/ml}) \times 1000$ [ml/min/mg] (modified from references: Di, The Society for Biomolecular Screening, 2003, 453-462; Obach, DMD, 1999 vol 27. N 11, 1350-1359). The results are shown in Table 2.

3. Blocking the hERG channel

- 10 The binding affinity of test drugs for the hERG cardiac K⁺ channel was determined by their ability to displace tritiated dofetilide (a class III antiarrhythmic drug and potent hERG blocker) in membrane homogenates from HEK-293 cells heterogeneously expressing the hERG channel. The assay was performed as previously described G.J. Diaz et al., Journal of Pharmacological and Toxicological Methods, 50 (2004), 187-
 15 199).. For this, drug dilutions were prepared from 10 mM DMSO stocks and the following were added to a 96-well polystyrene plate (Perkin-Elmer Optiplat): 20 μl of assay binding buffer (for total bounds), or 1 μM astemizole (for non-specific bounds), or test drug, 50 μl of [³H]dofetilide (20 nM, ~80 Ci/mmol specific activity), and 130 μl of membrane homogenate from HEK 293 cells stably transfected with hERG K⁺ channels
 20 (final protein concentration of 30 μg per well). The plates were incubated at ambient temperature for 45 min, aspirated onto GF/B filter plates (Perkin-Elmer), and washed with 2 ml of cold wash buffer. After allowing the plates to dry, 50 μl of scintillant (Perkin-Elmer MicroScint 20) were added to each well and the radioactivity was counted in a Perkin-Elmer Topcount NXT scintillation counter. IC₅₀ determinations were

calculated from competition curves using 6 drug concentrations, half-log apart, starting at a high concentration of 100 μM (final assay DMSO concentration = 1%) using a four-parameter logistic equation. The results are given as IC_{50} value. The results are summarized in table 3.

10

We claim:

1. A compound of the formula I

5 where

m is 1 or 2,

n is 1 or 2,

A is selected from the group consisting of CH₂, CH₂CH₂, CHFCH₂ and CF₂CH₂,

10 R¹ is hydrogen or C₁-C₃-alkyl,

R² is selected from the group consisting of hydrogen and fluorine,

R^{3a} is selected from the group consisting of hydrogen and methyl,

R^{3b} is selected from the group consisting of hydrogen and methyl,

R⁴ is branched C₄-C₆ alkyl or branched fluorinated C₄-C₆ alkyl, and

15 R⁵ is an oxygen containing radical selected from the group consisting of C₁-C₂-alkoxy-C₁-C₄-alkyl, fluorinated C₁-C₂-alkoxy-C₁-C₄-alkyl, hydroxy-C₁-C₄-alkyl, fluorinated hydroxy-C₁-C₄-alkyl, oxetanyl, fluorinated oxetanyl, oxolanyl, fluorinated oxolanyl,

20 C₃-C₅ cycloalkyl, fluorinated C₃-C₅ cycloalkyl, where the cycloalkyl moiety in the last two mentioned radicals carries 1 or 2 radicals selected from hydroxyl, C₁-C₂-alkoxy and fluorinated C₁-C₂-alkoxy and may additionally carry 1 or 2 radicals selected from C₁-C₂-alkyl and fluorinated C₁-C₂-alkyl, C₃-C₅ cycloalkoxy-C₁-C₄-alkyl and fluorinated C₃-C₅ cycloalkoxy-C₁-C₄-alkyl, where the cycloalkoxy moiety in the last two mentioned radicals may carry 1 or 2 radicals selected from hydroxyl, C₁-C₂-alkoxy, fluorinated C₁-C₂-alkoxy, C₁-C₂-alkyl and fluorinated C₁-C₂-alkyl,

and the pharmaceutically acceptable salts of these compounds.

2. The compound of claim 1, wherein R^1 is hydrogen or methyl.
- 5 3. The compound of claim 1, wherein R^1 is methyl.
4. The compound of claim 1, wherein R^1 is hydrogen.
5. The compound of any of the preceding claims, wherein R^2 is hydrogen.
- 10 6. The compound of any of the preceding claims, wherein m is 2.
7. The compound of any of the preceding claims, wherein n is 2.
- 15 8. The compound of any of claims 1 to 7, wherein both m and n are 1.
9. The compound of any of the preceding claims, wherein R^{3a} and R^{3b} are hydrogen.
10. The compound of any claims 1 to 8, wherein either R^{3a} is methyl and R^{3b} is
20 hydrogen or R^{3a} is hydrogen and R^{3b} is methyl.
11. The compound of any of the preceding claims, wherein A is CH_2 .
12. The compound of any of claims 1 to 10, wherein A is CH_2CH_2 , $CHFCH_2$ or
25 CF_2CH_2 .
13. The compound of any of the preceding claims, wherein R^4 is branched C_4 - C_6 alkyl and in particular tert.-butyl.
- 30 14. The compound of any of the preceding claims, wherein R^5 is selected from the group consisting of C_1 - C_2 -alkoxy- C_1 - C_2 -alkyl, fluorinated C_1 - C_2 -alkoxy- C_1 - C_2 -alkyl and hydroxy- C_1 - C_4 -alkyl.

15. The compound of claim 14, wherein R⁵ is selected from the group consisting of methoxymethyl, ethoxymethyl, 2-methoxyethyl, difluoromethoxymethyl, 2-(difluoromethoxy)ethyl, trifluoromethoxymethyl, 2-(trifluoromethoxy)ethyl, methoxydifluoromethyl, ethoxydifluoromethyl, 2-methoxy-1,1-difluoroethyl, hydroxymethyl, 2-hydroxyethyl, 2-hydroxypropyl and 2-hydroxy-2-methylpropyl.
16. The compound of claim 14, wherein R⁵ is C₁-C₂-alkoxy-C₁-C₂-alkyl.
17. The compound of any of the claims 1 to 13, wherein R⁵ is selected from the group consisting of oxetanyl, fluorinated oxetanyl, oxolanyl, fluorinated oxolanyl, and C₃-C₅ cycloalkyl, which carries 1 or 2 radicals selected from hydroxy and C₁-C₂-alkoxy.
18. The compound of claim 17, wherein R⁵ is selected from the group consisting of 2-oxetanyl, 3-oxetanyl, 2-oxolanyl, 3-oxolanyl, 3-methoxycyclobutyl and 3-hydroxycyclobutyl.
19. The compound of any of the preceding claims, wherein
 - A is CH₂, CH₂CH₂, CHFCH₂ or CF₂CH₂;
 - R¹ is hydrogen or methyl;
 - R² is hydrogen;
 - R^{3a} and R^{3b} are hydrogen or either R^{3a} is methyl and R^{3b} is hydrogen or R^{3a} is hydrogen and R^{3b} is methyl; and
 - R⁴ is tert-butyl.
20. The compound of any of the preceding claims, which is a compound of the formula Ia,

where R^2 is H and R^1 , R^{3a} , R^{3b} , R^5 and A are as defined in any one of the preceding claims, and the pharmaceutically acceptable salts of these compounds.

- 5 21. The compound of any of claims 1 to 19, which is a compound of the formula Ib,

where R^2 is H and R^1 , R^{3a} , R^{3b} , R^5 and A are as defined in any one of the preceding claims, and the pharmaceutically acceptable salts of these compounds.

- 10 22. The compound of any of claims 1 to 19, which is a compound of the formula Ic,

where R^2 is H and R^1 , R^{3a} , R^{3b} , R^5 and A are as defined in any one of the preceding claims, and the pharmaceutically acceptable salts of these compounds.

23. The compound of any of the preceding claims, where in formulae I or Ia or Ic the radical $R^1-C(=O)-NH$ and the radical R^2 predominately adopt cis-configuration.
24. The compound of any of claims 1 to 22, where formulae in I or Ia or Ic the radical $R^1-C(=O)-NH$ and the radical R^2 predominately adopt trans-configuration.
25. The compound according to claim 1, selected from the group consisting of:
 - N-[4-[2-[4-[2-tert-butyl-6-(ethoxymethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]acetamide,
 - 10 N-[4-[2-[4-[2-tert-butyl-6-(ethoxymethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]formamide,
 - N-[4-[2-[4-[2-tert-butyl-6-(methoxymethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]acetamide,
 - N-[4-[2-[4-[2-tert-butyl-6-(methoxymethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]formamide,
 - 15 N-[4-[2-[4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]acetamide,
 - N-[4-[2-[4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]formamide,
 - 20 N-[4-[2-[4-[2-tert-butyl-6-(ethoxydifluoromethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]acetamide,
 - N-[4-[2-[4-[2-tert-butyl-6-(ethoxydifluoromethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]formamide,
 - N-[4-[2-[4-[2-tert-butyl-6-(1,1-difluoro-2-methoxyethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]acetamide,
 - 25 N-[4-[2-[4-[2-tert-butyl-6-(1,1-difluoro-2-methoxyethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]formamide,
 - N-[4-[2-[4-[2-tert-butyl-6-(2-difluoromethoxyethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]acetamide,
 - 30 N-[4-[2-[4-[2-tert-butyl-6-(2-difluoromethoxyethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]formamide,

- N-[4-[2-[4-[2-tert-butyl-6-(2-trifluoromethoxyethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(2-trifluoromethoxyethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]formamide,
- 5 N-[4-[2-[4-[2-tert-butyl-6-(oxetan-3-yl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(oxetan-3-yl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]formamide,
- 10 N-[4-[2-[4-[2-tert-butyl-6-(oxetan-2-yl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(oxetan-2-yl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]formamide,
- N-[4-[2-[4-[2-tert-butyl-6-(oxolan-3-yl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]acetamide,
- 15 N-[4-[2-[4-[2-tert-butyl-6-(oxolan-3-yl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]formamide,
- N-[4-[2-[4-[2-tert-butyl-6-(3-methoxycyclobutyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(3-methoxycyclobutyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]formamide,
- 20 N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxyethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxyethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]formamide,
- 25 N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxypropyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxypropyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]formamide,
- N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxy-2-methylpropyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]acetamide,
- 30 N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxy-2-methylpropyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]formamide,

- N-[4-[2-[4-[2-tert-butyl-6-(3-hydroxycyclobutyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(3-hydroxycyclobutyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]formamide,
- 5 N-[4-[2-[4-[2-tert-butyl-6-(ethoxymethyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(ethoxymethyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- 10 N-[4-[2-[4-[2-tert-butyl-6-(methoxymethyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(methoxymethyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- N-[4-[2-[4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- 15 N-[4-[2-[4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- N-[4-[2-[4-[2-tert-butyl-6-(ethoxydifluoromethyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(ethoxydifluoromethyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- 20 N-[4-[2-[4-[2-tert-butyl-6-(1,1-difluoro-2-methoxyethyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(1,1-difluoro-2-methoxyethyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- 25 N-[4-[2-[4-[2-tert-butyl-6-(2-difluoromethoxyethyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(2-difluoromethoxyethyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- 30 N-[4-[2-[4-[2-tert-butyl-6-(2-trifluoromethoxyethyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(2-trifluoromethoxyethyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,

- N-[4-[2-[4-[2-tert-butyl-6-(oxetan-3-yl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(oxetan-3-yl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- 5 N-[4-[2-[4-[2-tert-butyl-6-(oxetan-2-yl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(oxetan-2-yl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- 10 N-[4-[2-[4-[2-tert-butyl-6-(oxolan-3-yl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(oxolan-3-yl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- N-[4-[2-[4-[2-tert-butyl-6-(3-methoxycyclobutyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- 15 N-[4-[2-[4-[2-tert-butyl-6-(3-methoxycyclobutyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxyethyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxyethyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- 20 N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxypropyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxypropyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- 25 N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxy-2-methylpropyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxy-2-methylpropyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- N-[4-[2-[4-[2-tert-butyl-6-(3-hydroxycyclobutyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- 30 N-[4-[2-[4-[2-tert-butyl-6-(3-hydroxycyclobutyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,

- N-[4-[2-[4-[2-tert-butyl-6-(ethoxymethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(ethoxymethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- 5 N-[4-[2-[4-[2-tert-butyl-6-(methoxymethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(methoxymethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- 10 N-[4-[2-[4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- N-[4-[2-[4-[2-tert-butyl-6-(ethoxydifluoromethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- 15 N-[4-[2-[4-[2-tert-butyl-6-(ethoxydifluoromethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- N-[4-[2-[4-[2-tert-butyl-6-(1,1-difluoro-2-methoxyethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(1,1-difluoro-2-methoxyethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- 20 N-[4-[2-[4-[2-tert-butyl-6-(2-difluoromethoxyethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(2-difluoromethoxyethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- 25 N-[4-[2-[4-[2-tert-butyl-6-(2-trifluoromethoxyethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(2-trifluoromethoxyethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- 30 N-[4-[2-[4-[2-tert-butyl-6-(oxetan-3-yl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(oxetan-3-yl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,

- N-[4-[2-[4-[2-tert-butyl-6-(oxetan-2-yl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(oxetan-2-yl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- 5 N-[4-[2-[4-[2-tert-butyl-6-(oxolan-3-yl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(oxolan-3-yl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- 10 N-[4-[2-[4-[2-tert-butyl-6-(3-methoxycyclobutyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(3-methoxycyclobutyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxyethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- 15 N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxyethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxypropyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxypropyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- 20 N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxy-2-methylpropyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxy-2-methylpropyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- 25 N-[4-[2-[4-[2-tert-butyl-6-(3-hydroxycyclobutyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(3-hydroxycyclobutyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- 30 N-[4-[2-[4-[2-tert-butyl-6-(ethoxymethyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(ethoxymethyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]formamide,

- N-[4-[2-[4-[2-tert-butyl-6-(methoxymethyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(methoxymethyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]formamide,
- 5 N-[4-[2-[4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]formamide,
- 10 N-[4-[2-[4-[2-tert-butyl-6-(ethoxydifluoromethyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(ethoxydifluoromethyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]formamide,
- N-[4-[2-[4-[2-tert-butyl-6-(1,1-difluoro-2-methoxyethyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]acetamide,
- 15 N-[4-[2-[4-[2-tert-butyl-6-(1,1-difluoro-2-methoxyethyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]formamide,
- N-[4-[2-[4-[2-tert-butyl-6-(2-difluoromethoxyethyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(2-difluoromethoxyethyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]formamide,
- 20 N-[4-[2-[4-[2-tert-butyl-6-(2-trifluoromethoxyethyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(2-trifluoromethoxyethyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]formamide,
- 25 N-[4-[2-[4-[2-tert-butyl-6-(oxetan-3-yl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(oxetan-3-yl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]formamide,
- N-[4-[2-[4-[2-tert-butyl-6-(oxetan-2-yl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]acetamide,
- 30 N-[4-[2-[4-[2-tert-butyl-6-(oxetan-2-yl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]formamide,

- N-[4-[2-[4-[2-tert-butyl-6-(oxolan-3-yl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]acetamide,
 N-[4-[2-[4-[2-tert-butyl-6-(oxolan-3-yl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]formamide,
- 5 N-[4-[2-[4-[2-tert-butyl-6-(3-methoxycyclobutyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]acetamide,
 N-[4-[2-[4-[2-tert-butyl-6-(3-methoxycyclobutyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]formamide,
- 10 N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxyethyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]acetamide,
 N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxyethyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]formamide,
- N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxypropyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]acetamide,
- 15 N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxypropyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]formamide,
- N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxy-2-methylpropyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxy-2-methylpropyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]formamide,
- 20 N-[4-[2-[4-[2-tert-butyl-6-(3-hydroxycyclobutyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]acetamide,
 N-[4-[2-[4-[2-tert-butyl-6-(3-hydroxycyclobutyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]formamide,
- 25 N-[3-[2-[4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]]piperazin-1-yl]ethyl]cyclopentyl]acetamide,
 N-[3-[2-[4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]]piperazin-1-yl]ethyl]cyclopentyl]formamide,
- N-[3-[2-[4-[2-tert-butyl-6-(methoxymethyl)pyrimidin-4-yl]]piperazin-1-yl]ethyl]cyclopentyl]acetamide,
- 30 N-[3-[2-[4-[2-tert-butyl-6-(methoxymethyl)pyrimidin-4-yl]]piperazin-1-yl]ethyl]cyclopentyl]formamide

- N-[3-[2-[4-[2-tert-butyl-6-(ethoxymethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclopentyl]acetamide,
 N-[3-[2-[4-[2-tert-butyl-6-(ethoxymethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclopentyl]formamide,
- 5 N-[3-[2-[4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclobutyl]acetamide,
 N-[3-[2-[4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclobutyl]formamide,
- 10 N-[3-[2-[4-[2-tert-butyl-6-(methoxymethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclobutyl]acetamide,
 N-[3-[2-[4-[2-tert-butyl-6-(methoxymethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclobutyl]formamide,
 N-[3-[2-[4-[2-tert-butyl-6-(ethoxymethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclobutyl]acetamide,
- 15 N-[3-[2-[4-[2-tert-butyl-6-(ethoxymethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclobutyl]formamide,
 the cis-isomers thereof, the trans-isomers thereof,
 and the pharmaceutically acceptable salts of these compounds.
- 20 26. The compound according to claim 1, selected from the group consisting of:
 N-[4-[2-[4-[2-tert-butyl-6-(hydroxymethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]acetamide,
 N-[4-[2-[4-[2-tert-butyl-6-(hydroxymethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]formamide,
- 25 N-[4-[2-[4-[2-tert-butyl-6-(hydroxymethyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
 N-[4-[2-[4-[2-tert-butyl-6-(hydroxymethyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,
- 30 N-[4-[2-[4-[2-tert-butyl-6-(hydroxymethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide,
 N-[4-[2-[4-[2-tert-butyl-6-(hydroxymethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide,

- N-[4-[2-[4-[2-tert-butyl-6-(hydroxymethyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]acetamide,
- N-[4-[2-[4-[2-tert-butyl-6-(hydroxymethyl)pyrimidin-4-yl]-1,4-diazepan-1-yl]ethyl]cyclohexyl]formamide,

N-[3-[2-[4-[2-tert-butyl-6-(ethoxymethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclobutyl]acetamide,

N-[3-[2-[4-[2-tert-butyl-6-(ethoxymethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclobutyl]formamide,

- 5 the cis-isomers thereof, the trans-isomers thereof,
and the pharmaceutically acceptable salts of these compounds.

27. The compound according to claim 1, selected from the group consisting of:
- 10 trans-N-[4-(2-{4-[2-tert-butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclohexyl]-acetamide
- trans-N-[4-(2-{4-[2-tert-butyl-6-(methoxymethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclohexyl]-acetamide
- cis-N-[4-(2-{4-[2-tert-butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclohexyl]-acetamide
- 15 cis-N-[3-(2-{4-[2-tert-butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclobutyl]-acetamide
- trans-N-[3-(2-{4-[2-tert-butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclobutyl]-acetamide
- 20 trans-N-[4-(2-{(2R)-4-[2-tert-butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-2-methyl-piperazin-1-yl}-ethyl)-cyclohexyl]-acetamide
- trans-N-[4-(2-{(3R)-4-[2-tert-butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-3-methyl-piperazin-1-yl}-ethyl)-cyclohexyl]-acetamide
- cis-N-[4-(2-{(2S)-4-[2-tert-butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-2-methyl-piperazin-1-yl}-ethyl)-cyclohexyl]-acetamide
- 25 trans-N-[4-(2-{(3S)-4-[2-tert-butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-3-methyl-piperazin-1-yl}-ethyl)-cyclohexyl]-acetamide
- trans-N-[4-(2-{(2S)-4-[2-tert-butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-2-methyl-piperazin-1-yl}-ethyl)-cyclohexyl]-acetamide
- 30 cis-N-[4-(2-{4-[2-tert-butyl-6-(2-trifluoromethoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclohexyl]-acetamide
- trans-N-[4-(2-{4-[2-tert-butyl-6-(2-trifluoromethoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclohexyl]-acetamide

- trans-N-[4-(2-{4-[2-tert-butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclohexyl]-formamide
- N-[3-(2-{4-[2-tert-butyl-6-(2-methoxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclobutyl]-formamide
- 5 trans-N-[4-(2-{4-[2-tert-butyl-6-(2-hydroxy-ethyl)-pyrimidin-4-yl]-piperazin-1-yl}-ethyl)-cyclohexyl]-acetamide
- trans-N-[(1R,3S)-3-[2-[4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclopentyl]acetamide
- trans-N-[(1S,3R)-3-[2-[4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclopentyl]acetamide
- 10 cis-N-[(1S,3S)-3-[2-[4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclopentyl]acetamide
- N-[cis-3-[2-[4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclobutyl]formamide
- 15 N-[trans-3-[2-[4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclobutyl]formamide
- trans-N-[4-[2-[(3R)-4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide
- trans-N-[4-[2-[(3S)-4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide
- 20 trans-N-[4-[2-[4-[2-tert-butyl-6-(methoxymethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]formamide
- trans-N-[4-[2-[4-[2-tert-butyl-6-(hydroxymethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]acetamide
- 25 trans-N-[4-[2-[4-[2-tert-butyl-6-(2-hydroxyethyl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]formamide
- trans-N-[4-[2-[(2R)-4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]formamide
- trans-N-[4-[2-[(3S)-4-[2-tert-butyl-6-(2-hydroxyethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide
- 30 trans-N-[4-[2-[(2R)-4-[2-tert-butyl-6-(2-hydroxyethyl)pyrimidin-4-yl]-2-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide

trans-N-[4-[2-[4-(2-tert-butyl-6-tetrahydrofuran-3-yl)pyrimidin-4-yl]piperazin-1-yl]ethyl]cyclohexyl]formamide

N-[3-[2-[2-[(3S)-4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclobutyl]formamide

5 trans-N-[4-[2-[2-[(3R)-4-[2-tert-butyl-6-(2-hydroxyethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide

trans-N-[3-[2-[2-[(3S)-4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclobutyl]acetamide

10 cis-N-[3-[2-[2-[(3S)-4-[2-tert-butyl-6-(2-methoxyethyl)pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclobutyl]acetamide

trans-N-[4-[2-[2-[(3S)-4-[2-tert-butyl-6-[2-(difluoromethoxy)ethyl]pyrimidin-4-yl]-3-methylpiperazin-1-yl]ethyl]cyclohexyl]acetamide

and the pharmaceutically acceptable salts of these compounds.

15

28. A compound of any of claims 1 to 27 for use as a medicament.

29. A pharmaceutical composition comprising at least one compound as claimed in any of claims 1 to 27, optionally together with at least one physiologically

20 acceptable carrier or auxiliary substance.

30. Use of at least one compound as claimed in any of claims 1 to 27 in the manufacture of a medicament for treating Parkinson's disease, schizophrenia, bipolar disorder, depression, motivation disturbances, anxiety, cognitive
25 dysfunction, pain, substance dependence, substance abuse, substance tolerance, substance withdrawal, anorexia and weight loss.

31. Use of at least one compound as claimed in any of claims 1 to 27 in the manufacture of a medicament for treating diabetic nephropathy.
