

PASSWORD PROTECTION QUESTION SETTING METHOD AND DEVICE

Abstract

A password protection question setting method and device, the method comprising: receiving a request to set a password protection question for a password (201), the setting request comprising user identification; extracting one or more pieces of setting information corresponding to the user identification (202); respectively acquiring one or more password protection questions matching the one or more pieces of setting information (203); and outputting the one or more password protection questions (204), such that when the user sets the password protection question, a password protection question related to preferences or interests of the user can be outputted, so as to create a more memorable password protection question for the user, thus reducing the possibility of the user forgetting the set password protection question and the answer thereof, and improving the practicability of a password protection question.
