SYSTEMS AND METHODS FOR ORDER PAIRING

Abstract

The disclosure provides systems and methods for order pairing. The systems may include a computer-readable storage medium configured to store an executable module; and a processor configured to execute the executable module stored in the computer-readable storage medium. The computer-readable storage medium may include a sending unit configured to send information associated with an order; a selecting unit configured to determine whether an order receiver accepts the order; and a pairing unit configured to pair the order based on historical data of the order requestor and the order receiver that is determined to accept the order. The methods may include sending information associated with an order to an order receiver, determining whether the order receiver accepts the order, and pairing the order based on historical data of the order requestor and the order receiver that is determined to accept the order.
