

ABSTRACT

The invention discloses a ticket machine and an integrated module with coin handling and single journey ticket vending functions. The integrated module includes a coin validator, a money and ticket handling module, and
5 a change outlet for receiving coins and single journey tickets. The money and ticket handling module is connected with the change outlet through an outlet of a second diverter, and another outlet of the second diverter is connected with coin container. This solution integrates device for handling coins with device for handling single journey tickets, so that the functions
10 of receiving, validating, refunding, changing, replenishing, and clearing coins, as well as operations such as single journey ticket supply, ticket valuation, ticket issuance and ticket clearance can be performed in the same module, so that avoids separately setting up a coin handling module and a single journey ticket vending module to achieve the above functions,
15 which makes the product has a simple overall layout and occupies less space, thereof contributes to miniaturization of the ticket machine.
