ABSTRACT

A shooting method is provided, a current display page is displayed and controls in a control region of the current display page are also displayed, where the controls includes a main shooting control and at least two special effect controls; when a target slide operation acting on a main display region is received, each control is controlled to move to determine a target control; when the target control is one special effect control, a shooting page and a preview effect of a target shooting special effect are displayed on the shooting page, and when a first trigger operation is detected, shooting is performed by using the target shooting special effect; and when the target control is the main shooting control, the shooting page is displayed, and when a second trigger operation is detected, the shooting is performed.
