

ABSTRACT

BIOMETRIC KEY

- 5 A biometric key (10) which has an interface or electrical connection to a receptor body (11) which functions as an external power source a biometric sensor, a CPU, a nonvolatile memory unit incorporating a database of authorised biometric signatures or biocodes along with associated firmware required for comparison between data received from the biometric sensor and to provide acceptance or rejection of said
- 10 data upon electrical connection to the receptor body (11) whereby a signal is sent to a facility (12, 13, 15, 16, 17) accessible by the key (10) advising of said acceptance or rejection.
