

ABSTRACT

Aspects concern an aerosol-generating substrate carrier (10, 30) for use with an aerosol-generating device, the aerosol-generating substrate carrier (10) comprising: a substrate holder (14) shaped and dimensioned to receive one or more aerosol-generating substrate (13); a carrier body (11) slidably connected to the substrate holder (14), the carrier body (11) configured to embed or house a susceptor (25), the carrier body (11) comprising a guiding mechanism to slidably move the substrate holder (14) towards and away from the carrier body (11); wherein the susceptor (25) comprises a material with a predefined Curie temperature; and wherein the aerosol-generating substrate carrier (10) is removably attached to the aerosol-generating device.
