

ABSTRACT

A music playing method and apparatus based on user interaction, and a device and a storage medium, which relate to the technical field of music videos. The method comprises: collecting a target video by means of a video capturing apparatus; when it is identified, in the target video, that a target object presents a target action, determining an audio processing mode corresponding to the target action; and playing music in the audio processing mode. A target video is collected by means of a video capturing apparatus; when it is identified, in the target video, that a target object performs a target action, a corresponding audio processing mode is determined on the basis of the target action; and music is played in the audio processing mode, such that a user can create personalized music at will by means of a video and according to his/her own operations, musical creation is not restricted, and the fun of musical creation is also increased, thereby improving the user experience.
