(54) Title: TAMPER EVIDENT DEVICE

(57) Abstract: The invention relates to a security device (10) for a container such as a bag or envelope closeable by a slide fastener having a slider (16). The security device (10) includes a lower part (12) for attachment to the container and means (14) for attaching the security device (10) to the slider (16), directly or indirectly. An upper part (20) retains the attaching means (14). Receiving means (24) can receive a frangible seal (26) and prevent retraction of the frangible seal (26), except by fracture thereof. Means (28) limits access to the attaching means (14) and the receiving means (24). The security device (10) includes an area of weakness (30) adapted to fracture if the security device (10) is prised from the container.
