

ABSTRACTTELECOMMUNICATIONS CABLE MANAGEMENT

5 A cable management apparatus includes a tray having a
pair of arms for connections to a communications assembly
and a body having a plurality of cable channels defined by
arcuate guide walls. The channels have a relatively narrow
exit and a relatively wide entrance and the curvature of
the walls is chosen not to exceed a predetermined maximum
10 cable bend radius. Further guides are arranged in the
channel entrances as extensions of adjacent channel side
walls.
