

DEVICE FOR DISPLACING A DOOR FOR A TRANSPORT VEHICLE
COMPRISING A PARTIAL OPENING FUNCTION, DOOR AND VEHICLE
THUS EQUIPPED

ABSTRACT

This device comprises a main body (1), fixing means (8) affording the fixing of the leaf to the body, drive means (30) able to drive a body under the effect of motor means (106, 108), locking means (36) able to move between an active locking position in which they lock the drive means with respect to the body, in the closed position of the leaf, and an inactive unlocking position in which they allow a displacement of the drive means with respect to this body, and partial opening means (7) able to allow a small movement of the fixing means with respect to the drive means, in the displacement direction, from the closed position of the leaf.
