(54) Title: CONNECTOR UNIT COMPRISING NUT RECEPTACLE

(57) Abstract: Connector unit for providing a connection to a strut channel that has two opposing lips, the connector unit comprising • an elongate channel nut for engaging behind the lips of the channel, wherein the channel nut has a threaded bore for threadedly receiving a threaded rod, • a rotational driver for rotationally coupling the threaded rod to the channel nut, for rotating the channel nut between a channel insertion rotational position and a channel engagement rotational position, and • a lip insert for engaging between the lips of the channel so as to provide a rotational seat on the channel, wherein the rotational driver is connected to the lip insert, • wherein the lip insert comprises at least one first resilient tongue for resiliently acting against a first lip of the channel.
