

ABSTRACT

Disclosed are a composition comprising an oily medium system and an active ingredient, and a method for increasing bioavailability of an active ingredient. The method comprises incorporating the active ingredient into an oily medium system, wherein the oily medium system comprises a vegetable oil and/or a component of a vegetable oil, but is free of the following substances: phosphate buffered saline(PBS), polyethylene glycols (PEGs), dimethyl sulfoxide (DMSO), ethanol, polypropylene glycols, polysorbates, ethyl acetate, hydroxyethyl 12-hydroxystearate, and tocopheryl polyethylene glycol succinate (TPGS). The active ingredient is selected from the group consisting of: a compound of formula (I), a pharmaceutically acceptable salt of the compound of formula (I), and combinations thereof:

wherein, T₁ is C₆ cycloalkane; and R₁ is C₁-C₈ aliphatic hydrocarbon group.
