Abstract

MONOMETHYLVALINE COMPOUNDS CAPABLE OF CONJUGATION TO LIGANDS

Auristatin peptides, including MeVal-Val-Dil-Dap-Norephedrine (MMAE) and MeVal-Val-Dil-Dap-Phe (MMAF), were prepared and attached to Ligands through various linkers, including maleimidocaproyl-val-cit-PAB. The resulting ligand drug conjugates were active *in vitro and in vivo.*
