

ABSTRACT

SURFACE TREATMENT AGENT AND METHOD FOR MANUFACTURING
SURFACE TREATMENT BODY

5

The present disclosure provides a surface treatment agent capable of not only being prepared by dissolving raw materials in a short time but also exerting a good water repellency imparting effect, and a method for manufacturing a surface treated body with the use of the surface treatment agent. The surface treatment agent according to the present disclosure includes the following components: (I) at least one kind selected from the group consisting of silicon compounds represented by the following formulas [1] and [2]; (II) at least one kind selected from the group consisting of a nitrogen-containing heterocyclic compound represented by the following general formula [3], a nitrogen-containing heterocyclic compound represented by the following general formula [4] and imidazole; (III) an organic solvent; and (IV) at least one kind selected from the group consisting of silicon compounds represented by the following formulas [5] and [6].
