

Abstract

The invention relates to a device (10) for catching and ejecting a
5 cartridge case, in particular a cartridge base, with a catching device (1)
that is movable between a catch position (A) and an ejection position
(W), wherein the cartridge case is caught in the catching device (1) in
the catch position (A) (1) and can be ejected from it in the ejection posi-
tion (W) via an ejector (2), wherein the ejector (2) can be automatically
10 moved into a tension position (S) by a movement of the catching device
(1) and can be automatically released when the ejection position (A) is
reached.
