

ABSTRACT

The present disclosure relates to a GLP-1R agonist compound and use thereof, and specifically provides a compound represented by Formula I, or an isotope-labelled compound, stereoisomer, or pharmaceutically acceptable salt thereof, and use thereof as a medicament. The compound exhibits excellent agonistic effects and pharmacodynamic properties on GLP-1R and, as a modulator, is useful for manufacturing a medicament for the treatment, amelioration, or prevention of metabolic diseases and related diseases, thus having broad application prospects.
