

MEAT GRADING METHOD AND MEAT GRADING SYSTEM

ABSTRACT

The present disclosure provides a meat grading method and a meat grading system. The method includes: acquiring a multi-dimensional meat imaging information of a meat piece; performing a high-precision measurement on the meat piece to acquire grading true value data of the meat piece; calculating a grading indicator parameter calculation value based on the multi-dimensional meat imaging information, and training a grading indicator parameter model based on the grading indicator parameter calculation value and the grading true value data to acquire a trained grading indicator parameter model.
