

MODELING METHOD AND APPARATUS

ABSTRACT

A modeling method and an apparatus are disclosed, ~~and relate to the computer field.~~ The method includes: obtaining a first data set of a first indicator, and determining, based on the first data set, a second indicator similar to the first indicator (401); and determining a first model based on one or more second models associated with the second indicator (402). The first model is used to detect a status of the first indicator, and the status of the first indicator includes an abnormal state or a normal state. The second models are used to detect a status of the second indicator, and the status of the second indicator includes an abnormal state or a normal state. ~~The method reduces costs and improves modeling efficiency.~~
