

PAGE DISPLAY METHOD AND APPARATUS, AND ELECTRONIC DEVICE

ABSTRACT

5 Embodiments of the present application disclose a page display method and apparatus, and electronic device. The method comprises: acquiring page data after receiving an access request for a target page, the page data comprising data corresponding to a plurality of tab pages, and the plurality of tab pages comprising a first tab page and at least one second tab page, wherein the first tab page comprises links to a plurality of first application services, and the links are used to jump to render render pages of the first application services; the
10 second tab page corresponds to a render page of a second application service; and switching to the second tab page to display the render page of the second application service by receiving a switching operation performed between the plurality of tab pages. Through the embodiments of the present application, an access to a plurality of application services is
15 achieved more efficiently, and meanwhile, excessive impact on traffic balance among the plurality of application services is avoided.
