(54) Title: METHODS FOR CHARACTERIZATION OF VIRAL GENOME USING BASE MODIFICATIONS

FIG. 3

(57) Abstract: Methods for assaying a sample of viral particles comprising a single-stranded DNA genome for strand-specificity are disclosed. In embodiments, the methods include synthesis of a synthetic DNA strand complementary to the single-stranded DNA genome by incorporating a modified base to yield a labeled double-stranded DNA product, purification of the labeled double-stranded DNA product, sequencing of the purified double-stranded DNA product on a sequencer, and determining the specificity of the viral single-stranded DNA genome based on the detection of the modified base of the synthetic DNA strand.
