

ABSTRACT

The present invention provides a pot assembly and a cooking appliance. The pot assembly comprises an inner pot (1) and a food steamer (2), and the inner pot defines (1) a cooking chamber (18); the food steamer (2) is placed in the cooking chamber (18), communication holes (211, 221) in communicating with the cooking chamber (18) are provided on the food steamer (2), and the food steamer (2) comprises a bottom wall (21); a draining-steaming-cooked rice waterline (28) is provided on the inner pot (1) and/or the food steamer (2), and the draining-steaming-cooked rice waterline (28) is higher than the bottom wall (21) of the food steamer (2). According to the pot assembly, the draining-steaming-cooked rice waterline (28) higher than the bottom wall (21) of the food steamer (2) is provided, and the amount of a solution and the amount of a material to be cooked are determined according to the information of solution indicated by the draining-steaming-cooked rice waterline (28) and the information of material to be cooked, so that the taste of the draining-steaming-cooked rice can be better satisfied.
