

ABSTRACT
LUBRICATING OIL COMPOSITION

5 The first purpose of the present invention is to provide a lubricating oil composition
which achieves extended anti-shudder durability without causing a decrease in the metal-to-
metal friction coefficient, even when the viscosity of the composition is reduced. Provided is a
lubricating oil composition characterized by comprising (A) a lubricant base oil, (C) (C-1) a
succinimide compound or boronated succinimide compound having a weight-average molecular
weight of 4,000 to 7,000, (C-2) a succinimide compound or boronated succinimide compound
10 having a weight-average molecular weight of more than 7,000 to 10,000, and (D) a phosphorus-
based extreme pressure agent, wherein the lubricating oil composition does not include zinc
dithiophosphate and may optionally include a sulfur-based extreme pressure agent, provided that
the content of sulfur-based extreme pressure agent is no more than 0.1 percent by weight of the
lubricating oil composition.
