

ABSTRACT

Worklight with USB charger

The present invention relates to lamps, and discloses a portable lamp equipped
5 with charging and discharging function that comprises the lamp body (1). The
lamp body (1) is accommodated with a storage battery (2), a light source board
and an electronic circuit board (10) that is used for adjusting voltages; the
storage battery (2) provides power for the light source board within the lamp
body (1); outer surface of the lamp body (1) is mounted with a discharging port
10 (4) and a charging port (3) that is used to connect a 5V adapter; the 5V adapter
provides power for the storage battery via the charging port (3); the discharging
port (4) is connected to the digital product and supplies electrical energy to the
digital product; the charging port (3) and the discharging port (4) are both
connected to the storage battery (2) via the electronic circuit board (10). By
15 mounting the storage battery on the lamp body, the present invention makes the
lamp be able to work normally in an environment where no external power
supply is available, and meanwhile be able to charge the digital product (e.g.
mobile phone, ipad, MP4, digital camera and the like); also, the lamp has a
simple and rational structure, and brings convenience to customers.
