

ABSTRACT

A camouflage net 20 is placed on an outer periphery of the base body 10, so as to extend outwardly beyond the outer periphery. A line-member 40 having shape-maintaining characteristic is fixed with using a sheet 30 being sandwiched between the line-member 40 and the camouflage net 20, below. The line-member 40 meanders like waves and partially extends outwardly beyond the camouflage net 20. A reinforce layer (50) is placed on the outer periphery of the base body (10) over the line-member (40). The total thickness of the base body 10, the camouflage net 20, and the sheet 30 provides a certain distance "h" between bottom faces of the base body 10 and the line-member 40. Thanks to the distance "h", user's own hairs right below the front edge of the wig base can rise up from root by some distance, such that a natural appearance can be realized.
