THIS SHEET HAS BEEN REPLACED

INFORMATION PROCESSING APPARATUS, INFORMATION PROCESS METHOD, AND MEDIUM RECORDED THE SAME METHOD

ABSTRACT

In addition to image information recorded in a disc, "n" pcs. of selection lists which have their own proper numbers are recorded in the disc, further, an address list of information stored outside of the disc is recorded in the disc. Each selection list has addresses of inside information of the image information recorded in the disc, one or more selection numbers and their corresponding selection lists. The address list has selection list ID numbers and addresses corresponding to the selection list ID numbers. During the regular playback operation - playing back the image information recorded in the disc -, when a user gives an instruction of selecting outside information, the user can get the address of the outside information from the now used selection list by retrieving the address list.
