

METHOD FOR MANUFACTURING CONDUCTIVE CONTACT HOLDER, AND
CONDUCTIVE CONTACT HOLDER

5

ABSTRACT

A method for manufacturing a conductive contact holder includes forming, from an insulating material, a holder
10 member for holding a plurality of conductive contacts;
forming, from a conductive material, a substrate having a hollow portion to which the holder member can be fitted;
and fixing the holder member formed from the insulating material by fitting the substrate into the hollow portion
15 of the substrate formed from the conductive material.
