(54) Title: GENERATIVE FILLING OF DESIGN CONTENT

(57) Abstract: A network computer system provides interactive graphic design system instructions for performing generative filling of design content. The network computer system determines a set of repeating design elements within a design interface. The network computer system also determines input into a machine learning model that includes (i) example content associated with the set of repeating design elements and (ii) one or more instructions associated with the example content. The network computer system populates at least a portion of the set of repeating design elements with additional content generated by the machine learning model in response to the input.
