

METHOD AND DEVICE FOR ESTABLISHING CONVERSATION RELATION

ABSTRACT

Disclosed are a method, device and system for establishing conversation relation, which relates to the field of internet and. The method comprises the following steps: local terminal recognizes the opposite terminal within a preset range and establishes NFC connection with the opposite terminal, both of local terminal and opposite terminal have NFC module installed and instant messaging application running; when touching is detected, local terminal initiates a NFC request to opposite terminal via NFC connection, obtain opposite terminal user ID and certificate, and sends request information to the server; the server establishes conversation relation between local terminal and opposite terminal according to request information. With the present invention, local terminal obtains opposite terminal user ID and certificate by touching, and sends request information which includes local terminal user ID, opposite terminal user ID and certificate to the server, so that the server can establish sessions between local terminal and local terminal without certification of both sides, it avoids the trouble of locating, verifying, establishing friendship via network before session between friends within touch effectively
