(54) Title: METHOD FOR IDENTIFYING A MODULATOR OF A CELL SIGNALLING

(57) Abstract: There is described a method for identifying a potential modulator of a cell signalling pathway, comprising the steps of: (a) providing a cell of a first cell type, wherein said first cell type may be differentiated to a second cell type via a progenitor cell by sequentially exposing said first cell type to two or more reaction conditions; (b) adding to or replacing at least one of said two or more reaction conditions to which the progenitor cell has been exposed with exposure to one or more different reaction conditions comprising said potential modulator; -and (c) monitoring the differentiation of the first cell type to determine formation of the second cell type.
