(54) **Title:** SWITCH

FIG. 1

- (57) **Abstract:** Provides a switch, comprising a control system (101), a first manipulating mechanism (102), and a second manipulating mechanism (103), wherein the control system (101) emits a first action instruction to the first manipulating mechanism (102) and a second action instruction to the second manipulating mechanism (103), respectively, the first action instruction being configured for instructing the first manipulating mechanism (102) to perform a first action, and the second action instruction being configured for instructing the second manipulating mechanism (103) to perform a second action; and the time taken by the first manipulating mechanism (102) to implement the first action is different from the time taken by the second manipulating mechanism (103) to implement the second action.
