S202 Acquire first identification information of a first server, wherein the first identification information is used for identifying the first server

S204 Acquire state information of the first server on the basis of the first identification information, wherein the state information is used for representing whether the first identification information has been collected by a target interface of an access device

S206 In response to the state information being used for representing that the first identification information is not collected by the target interface, send the first identification information to the target interface, so as to establish a first mapping relationship between the first server and the target interface on the basis of the first identification information

(57) Abstract: Disclosed in the present invention are a data processing method and system. The method comprises: acquiring first identification information of a first server, wherein the first identification information is used for identifying the first server; acquiring state information of the first server on the basis of the first identification information, wherein the state information is used for representing whether the first identification information has been collected by a target interface of an access device; and in response to the state information being used for representing that the first identification information is not collected by the target interface, sending

本国际公布:

— 包括国际检索报告(条约第21条(3))。

the first identification information to the target interface, so as to establish a first mapping relationship between the first server and the target interface on the basis of the first identification information. The technical problem is solved by means of the present invention.

(57) 摘要: 本发明公开了一种数据处理方法和系统。其中, 该方法包括: 获取第一服务器的第一标识信息, 其中, 第一标识信息用于标识第一服务器; 基于第一标识信息获取第一服务器的状态信息, 其中, 状态信息用于表示第一标识信息是否已由接入设备的目标接口采集到; 响应于状态信息用于表示第一标识信息未由目标接口采集到, 则将第一标识信息发送至目标接口, 以基于第一标识信息建立第一服务器与目标接口之间的第一映射关系。本发明解决了的技术问题。
