

SANITARY CUBICLE, IN PARTICULAR TOILET CUBICLE

ABSTRACT

The invention relates to a sanitary cubicle comprising at least one floor part, at least one roof part and a plurality of sidewall parts. At least one sanitary device and at least one tank for wastewater and/or faeces are also provided. At least one structural component of the sanitary cubicle is provided with antimicrobial properties. For this purpose, at least one surfadace region of the structural component, preferably the entire structural component or substantially the entire structural component, is made of a material containing at least one antimicrobial additive.
