

Description

Title of Invention:

5-METHYL-6-PHENYL-4,5-DIHYDRO-2H-PYRIDAZIN-3-ONE DERIVATIVE

Technical Field

- [0001] The present invention may relate to a 5-methyl-6-phenyl-4,5-dihydro-2H-pyridazin-3-one derivative having antitumor activity, in particular, antitumor activity in brain.

Background Art

- [0002] Since nitrogen mustard was clinically used as an antineoplastic drug in the 1940s for the first time in the world, many antitumor drugs have been developed until now. Many of these antitumor drugs, however, can also exhibit cytotoxic action to normal cells, and thereby can show severe side-effects such as gastrointestinal dysfunction, myelosuppression, and hair loss. Therefore, most of these antitumor drugs are limited to the usage, and often show partial and short-term effects. Along with the recent developments in molecular biology, it has been tried to identify more highly tumor-selective molecular targets to improve the effect and side-effect, and such trials have attained some progress. However, the positive effects are not so expected in tumors which have low express/contribution of molecular targets, and the side-effects are not low as desired. Thus, it has been desired to develop novel drugs.
- [0003] Some antitumor drugs having a phenyldihydropyridazinone moiety which the present invention comprises are known, but all those structures are different from that of the present invention (Patent Literature 1 and Patent Literature 2).

Summary of Invention

Technical Problem

- [0005] The main purpose of the present invention is to provide a compound having a potent anticancer effect, low side-effects, which is expected to have good water-solubility.

Solution to Problem

- [0006] The present inventors have extensively studied and then have found that a novel compound represented by the following formula (1) has a potent antitumor activity, particularly antitumor activity in brain. Based upon the new findings, the present

invention has been completed. The present invention provides 5-methyl-6-phenyl-4,5-dihydro-2H-pyridazin-3-one derivative represented by the following formula (1) or a pharmaceutically acceptable salt thereof (hereinafter, sometimes referred to as "the present compound"). The present invention mainly is mentioned below.

[0007] (Term 1) A compound of formula (1):
[Chem.1]

or a pharmaceutically acceptable salt thereof
wherein

R¹ to R⁴ are independently hydrogen atom, halogen, OH, CN, C₁₋₆ alkyl group, halogenated C₁₋₆ alkyl group, C₂₋₆ alkenyl group, C₁₋₆ alkoxy group, or halogenated C₁₋₆ alkoxy group provided that one or two of R¹ to R⁴ are hydrogen atoms, but it is not that all of three or four thereof are hydrogen atoms, and

Y is C₁₋₆ alkylene or C₂₋₆ alkenylene group, wherein the alkylene or alkenylene group may be substituted with one or more substituents selected independently from the group consisting of C₁₋₆ alkyl group, halogen, and halogenated C₁₋₆ alkyl group, further wherein a substitutable carbon atom in the substituent bonding to the alkylene or alkenylene group and another substitutable carbon atom in the alkylene or alkenylene group, or two substitutable carbon atoms in the substituent bonding to the alkylene or alkenylene group may be combined together to form a 3- to 6-membered carbon ring.

[0008] (Term 2) The compound of Term 1 or a pharmaceutically acceptable salt thereof, wherein any two of R¹ to R⁴ are hydrogen atoms.

[0009] (Term 3) The compound of Term 1 or 2 or a pharmaceutically acceptable salt thereof, wherein R¹ to R⁴ are independently hydrogen atom, halogen, OH, CN, C₁₋₄ alkyl group, halogenated C₁₋₄ alkyl group, C₂₋₄ alkenyl group, C₁₋₄ alkoxy group, or halogenated C₁₋₄ alkoxy group.

[0010] (Term 4) The compound of Term 1 or 2 or a pharmaceutically acceptable salt thereof, wherein R¹ to R⁴ are independently hydrogen atom, fluorine atom, chlorine atom, OH, CN, C₁₋₄ alkyl group, vinyl group, or C₁₋₄ alkoxy group.

[0011] (Term 5) The compound of any one of Terms 1 to 4 or a pharmaceutically acceptable

salt thereof, wherein the alkylene or alkenylene group in Y is substituted with one or more substituents selected independently from the group consisting of C₁₋₄ alkyl group, halogen, and halogenated C₁₋₄ alkyl group, further wherein a substitutable carbon atom in the substituent bonding to the alkylene or alkenylene group and another substitutable carbon atom in the alkylene or alkenylene group, or two substitutable carbon atoms in the substituent bonding to the alkylene or alkenylene group may be combined together to form a 3- to 6-membered carbon ring.

[0012] (Term 6) The compound of any one of Terms 1 to 4 or a pharmaceutically acceptable salt thereof, wherein a carbon atom of the alkylene or alkenylene group in Y is substituted with one or two substituents selected independently from the group consisting of C₁₋₄ alkyl group and halogenated C₁₋₄ alkyl group, further when the carbon atom is substituted with two substituents, each substitutable carbon atom in the two substituents may be combined together to form a 3- to 6-membered carbon ring.

[0013] (Term 7) The compound of any one of Terms 1 to 4 or a pharmaceutically acceptable salt thereof, wherein the alkylene or alkenylene group in Y has no substituent.

[0014] (Term 8) The compound of any one of Terms 1 to 7 or a pharmaceutically acceptable salt thereof, wherein the compound of formula (1) is represented in the following formula.

[Chem.2]

[0015] (Term 9) The compound of Term 1 or a pharmaceutically acceptable salt thereof, which is selected from the following compounds:

Example 1:

6-[3-bromo-5-chloro-4-(2-hydroxy-2-methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 2:

6-[3,5-dichloro-4-(2-hydroxy-2-methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 7:

6-[3-chloro-5-fluoro-4-(3-hydroxy-2,2-dimethylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 12:

6-[3-bromo-2-fluoro-4-(3-hydroxypropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 19:

6-[3-chloro-2-fluoro-4-(3-hydroxypropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 22:

6-[3-chloro-2-fluoro-4-(3-hydroxypropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 24:

6-[3-bromo-2-fluoro-4-(2-hydroxy-2-methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 26:

6-[3-bromo-5-fluoro-4-(2-hydroxy-2-methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 31:

6-[3-chloro-4-(2-hydroxy-2-methylpropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 36:

6-[3-chloro-2-fluoro-4-(2-hydroxy-2-methylpropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 40:

6-{3-chloro-4-[(2R)-2-hydroxypropoxy]-5-methylphenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 44:

6-{3-chloro-4-[(1-hydroxycyclopropyl)methoxy]-5-methylphenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 47:

6-{3-chloro-2-fluoro-4-[(1-hydroxycyclopropyl)methoxy]phenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 48:

6-[3-bromo-2-fluoro-4-(2-hydroxypropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 53:

6-[3,5-dichloro-4-(2-hydroxypropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 54:

6-[3-chloro-2-fluoro-4-(2-hydroxypropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-

n-3-one,

Example 55:

6-[3-chloro-4-(2-hydroxypropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 57:

6-[3-bromo-5-chloro-4-(2-hydroxypropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 59:

6-[2-fluoro-4-(2-hydroxypropoxy)-3-vinylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 64:

6-[3-chloro-2-fluoro-4-(2-hydroxybutoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 69:

6-[3-bromo-5-fluoro-4-(3-hydroxy-2,2-dimethylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 72:

6-[3-chloro-4-(3-hydroxy-2,2-dimethylpropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 99:

6-[3-chloro-5-fluoro-4-(4-hydroxy-2,2-dimethylbutoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 100:

6-[3,5-dichloro-4-(4-hydroxy-2,2-dimethylbutoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 109:

6-[3,5-dichloro-4-(2,2-difluoro-3-hydroxypropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 112:

6-[3-bromo-4-(2,2-difluoro-3-hydroxypropoxy)-2-fluorophenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 113:

6-[3-chloro-4-(2,2-difluoro-3-hydroxypropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 118:

(5R)-(-)-6-[3-chloro-2-fluoro-4-(2-hydroxy-2-methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 120:

(5R)-(-)-6-[4-(2,2-difluoro-3-hydroxypropoxy)-2-fluoro-3-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 124:

(5R)-(-)-6-[2,3-difluoro-4-(2-hydroxy-2-methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 125:

(5R)-(-)-6-[3-fluoro-4-(3-hydroxy-2,2-dimethylpropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 127:

(5R)-(-)-6-[3-bromo-5-chloro-4-(3-hydroxy-2,2-dimethylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 131:

6-[3-chloro-2,5-difluoro-4-(2-hydroxy-2-methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 137:

6-[3-chloro-2-fluoro-4-(3-hydroxy-2,2-dimethylpropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 140:

6-[3-chloro-2,5-difluoro-4-(3-hydroxypropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 142:

6-[3-chloro-4-(3-hydroxy-2-methylpropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 148:

6-[3-chloro-2-fluoro-4-(2-hydroxypropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 151:

6-{3-chloro-2-fluoro-4-[(Z)-4-hydroxy-2-butenyloxy]-5-methylphenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 155:

6-(3-chloro-4-[(1S*,2R*)-2-(hydroxymethyl)cyclopropyl]methoxy)-5-methylphenyl)-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 159:

6-[3-chloro-4-(2,2-difluoro-3-hydroxypropoxy)-2-fluoro-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 160:

6-[4-(2,2-difluoro-3-hydroxypropoxy)-2-fluoro-3,5-dimethylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 167:

6-{3-chloro-2-fluoro-4-[(1-hydroxycyclopropyl)methoxy]-5-methylphenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 168:

6-{3-bromo-2-fluoro-4-[(1-hydroxycyclopropyl)methoxy]phenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 170:

6-{3,5-dichloro-4-[(1-hydroxycyclopropyl)methoxy]phenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one, and

Example 184:

6-[2-fluoro-4-(2-hydroxy-2-methylpropoxy)-3-(trifluoromethyl)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one.

- [0016] (Term 10) A pharmaceutical composition comprising the compound of any one of Terms 1 to 9 or a pharmaceutically acceptable salt thereof.
- [0017] (Term 11) An agent for treating malignant tumor, comprising the compound of any one of Terms 1 to 9 or a pharmaceutically acceptable salt thereof.
- [0018] (Term 12) A method for treating or preventing malignant tumor, comprising administering a therapeutically effective amount of the compound of any one of Terms 1 to 9 or a pharmaceutically acceptable salt thereof to a patient in need thereof.
- [0019] (Term 13) The pharmaceutical composition of Term 10 for use in treating or preventing malignant tumor.
- [0020] (Term 14) Use of the compound of any one of Terms 1 to 9 or a pharmaceutically acceptable salt thereof in the manufacture of an agent for treating malignant tumor.
- [0021] Preferably, the malignant tumor defined in the above Terms 11 to 14 is particularly brain tumor.

Effect of Invention

- [0022] The compound of the present invention can be a useful agent for treating tumor, particularly malignant tumor, in more detail, the compound is useful as a novel agent for treating childhood brain tumor selected from the group consisting of astrocytoma, malignant medulloblastoma, germ cell tumor, craniopharyngioma, and ependymoma; adult brain tumor selected from the group consisting of glioma, meningioma, pituitary adenoma, and nerve sheath tumor; head and neck cancer selected from the group consisting of maxillary sinus cancer, pharyngeal cancer (e.g. nasopharyngeal cancer, oropharyngeal cancer, hypopharyngeal cancer), laryngeal cancer, oral cancer (e.g. lip cancer, tongue cancer), and salivary gland cancer (e.g. parotid gland cancer); thoracic cancer and tumor selected from the group consisting of small cell lung cancer, non-small-cell lung cancer, thymoma, and mesothelioma; gastrointestinal cancer and tumor selected from the group consisting of esophageal cancer, liver cancer, primary liver

cancer, gallbladder cancer, bile duct cancer, gastric cancer, colorectal cancer (e.g. rectal cancer, anal cancer), pancreatic cancer, and pancreatic endocrine tumor; urologic cancer and tumor selected from the group consisting of penile cancer, renal pelvic/ureter cancer, renal cell cancer, testicular tumor (also referred to as testicular neoplasm), prostate cancer, bladder cancer, Wilms' tumor, and urothelial carcinoma; gynecologic cancer and tumor selected from the group consisting of vulvar cancer, cervical cancer, uterine body cancer, endometrial cancer, uterine sarcoma, chorio-carcinoma, vaginal cancer, breast cancer, ovarian cancer, and ovarian germ cell tumor; adult and childhood soft tissue sarcoma; bone tumor selected from the group consisting of osteosarcoma and Ewing's tumor; endocrine tissue cancer and tumor selected from the group consisting of adrenocortical carcinoma and thyroid cancer; malignant lymphoma and leukemia selected from the group consisting of malignant lymphoma, non-Hodgkin's lymphoma, Hodgkin's disease, multiple myeloma, plasma cell neoplasm, acute myeloid leukemia, acute lymphoblastic leukemia, adult T-cell leukemia-lymphoma, chronic myeloid leukemia, and chronic lymphocytic leukemia; or skin cancer and tumor selected from the group consisting of chronic myeloproliferative disorder, malignant melanoma, squamous cell carcinoma, basal cell carcinoma, and mycosis fungoides. In particular, the compound of the present invention is expected to have a high safety, for example, because the compound has no myelosuppressive action or the like that is a frequently-occurring side-effect in using a conventional anti-malignant tumor agent. In addition, the compound has a good water-solubility, thus it is expected to be used in the treatment via various administration ways.

Description of Embodiments

[0023] The compound of the present invention may be in the form of hydrate and/or solvate, and hence the present compound also encompasses hydrate and/or solvate thereof.

[0024] The compound of the present invention may have one chiral carbon atom or optionally more chiral carbon atoms. Unless otherwise indicated, the present compound also encompasses all stereoisomers thereof.

The compound of formula (1) may have a chiral carbon at 5th position of its 4,5-dihydro-2H-pyridazin-3-one moiety. Unless otherwise indicated here, the compound of formula (1) may encompass all stereoisomers, preferably a stereoisomer having R configuration at 5th position.

[0025] In addition, the compound of formula (1) (deuterium form) in which any one or more ^1H atoms are replaced by $^2\text{H(D)}$ atoms is within the scope of the present invention.

There may exist a polymorphism in a crystal of the compound of formula (1) or a pharmaceutically acceptable salt thereof, and hence such crystal polymorphism is also within the scope of the present invention.

- [0026] Each term used herein is explained below.
- The term "halogen" herein means fluorine atom, chlorine atom, bromine atom or iodine atom. Preferably, it is fluorine atom or chlorine atom.
- [0027] The term "alkyl group" herein means a saturated straight or branched chain hydrocarbon group. For example, the "C₁₋₄ alkyl" or "C₁₋₆ alkyl" means an alkyl having 1 - 4 or 1 - 6 carbon atoms, respectively. The "C₁₋₄ alkyl" includes, for example, methyl, ethyl, propyl, isopropyl, butyl, isobutyl, sec-butyl, and tert-butyl. The "C₁₋₆ alkyl" includes pentyl, isopentyl, neopentyl, and hexyl, besides the above C₁₋₄ alkyl.
- [0028] The term "halogenated alkyl group" means an alkyl group in which one or more replaceable hydrogen atoms are replaced by the same or different and one or more halogen atoms. For example, the term "halogenated C₁₋₆ alkyl group" means an alkyl group having 1 - 6 carbon atoms, in which one or more replaceable hydrogen atoms are replaced by the same or different and one or more halogen atoms, and it includes, for example, trifluoromethyl, pentafluoroethyl, 2-chloroethyl, 2-bromoethyl, heptafluoropropyl, 3-bromopropyl, nonafluorobutyl, tridecafluorohexyl, 2,2,2-trifluoroethyl, 1,1-difluoroethyl, 1,1-difluoropropyl, 1,1,2,2-tetrafluoropropyl, 3,3,3-trifluoropropyl, and 2,2,3,3,3-pentafluoropropyl, and it is preferably trifluoromethyl.
- [0029] The term "C₂₋₆ alkenyl group" means an unsaturated straight or branched chain C₂₋₆ hydrocarbon group having 1 - 3 carbon-carbon double bonds. Preferably, it is "C₂₋₄ alkenyl group". The "C₂₋₆ alkenyl group" includes, for example, ethenyl (i.e., vinyl group), propenyl, butenyl, pentenyl, and hexenyl.
- [0030] The term "alkoxy group" means "alkyl-O- group". For example, the "C₁₋₆ alkoxy group" means "C₁₋₆ alkyl-O- group", wherein the part "C₁₋₆ alkyl" is as defined in the above-defined "C₁₋₆ alkyl". Preferably, it is "C₁₋₄ alkoxy group". The "C₁₋₆ alkoxy group" includes, for example, methoxy, ethoxy, propoxy, isopropoxy, butoxy, isobutoxy, sec-butoxy, and tert-butoxy.
- [0031] The term "alkylene group" means a saturated straight or branched chain divalent hydrocarbon group. For example, the "C₁₋₆ alkylene group" means an alkylene group having 1 - 6 carbon atoms. The "C₁₋₆ alkylene group" includes, for example, methylene, ethylene, propylene, butylene, 1-methylpropylene, 2-methylpropylene, pentylene, 1-methylbutylene, 2-methylbutylene, hexylene, 2-ethylbutylene, and 1,3-dimethylbutylene.
- [0032] The term "alkenylene group" means an unsaturated straight or branched chain divalent hydrocarbon group having 1 or more carbon-carbon double bonds. For example, the "C₂₋₆ alkenylene group" means a C₂₋₆ alkylene group having 1 - 3 carbon-carbon double bonds. The "C₂₋₆ alkenylene group" includes, for example, ethynylene group, propynylene group, butynylene group, pentynylene group, and hexynylene group.

[0033] In the phrase "a substitutable carbon atom in the substituent bonding to the alkylene or alkenylene group and another substitutable carbon atom in the alkylene or alkenylene group, or two substitutable carbon atoms in the substituent bonding to the alkylene or alkenylene group may be combined together to form a 3- to 6-membered carbon ring" in Y, the term "substitutable carbon atom in the substituent bonding to the alkylene or alkenylene group" means a substitutable carbon atom in the C₁₋₆ alkyl group or the halogenated C₁₋₆ alkyl group which is selected as a substituent of the alkylene or alkenylene group in Y, and the term "3- to 6-membered carbon ring" includes, for example, cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl, cyclobutenyl, cyclopentenyl, cyclohexenyl, and a halogenated product thereof.

[0034] The term "pharmaceutically acceptable salt" includes, as an acid addition salt, an inorganic acid salt such as hydrochloride, hydrobromide, hydroiodide, sulfate, perchlorate, and phosphate, an organic acid salt such as oxalate, malonate, maleate, fumarate, lactate, malate, citrate, tartrate, benzoate, trifluoroacetate, acetate, methanesulfonate, p-toluenesulfonate, and trifluoromethanesulfonate, and an amino acid salt such as glutamate and aspartate; and as a basic salt, an alkali metal salt such as sodium salt and potassium salt, an alkaline-earth metal salt such as calcium salt, and ammonium salt.

[0035] General process to prepare the present compound

The above 4,5-dihydro-2H-pyridazin-3-one compound of formula (1) or a salt thereof can be prepared in a general manner of organic synthesis, for example, in the manner below, but the present invention should not be limited thereto. Material compounds used herein may be obtained from commercially available products or prepared in a conventional manner as appropriate.

[0036] [Chem.3]

Scheme 1

Wherein R^{1a} to R^{4a} are independently hydrogen atom, halogen, CN, C₁₋₆ alkyl group, halogenated C₁₋₆ alkyl group, C₂₋₆ alkenyl group, C₁₋₆ alkoxy group, or halogenated C₁₋₆ alkoxy group, provided that one or two of R^{1a} to R^{4a} are hydrogen atoms, but it is not that all of three or four thereof are hydrogen atoms. X¹ denotes a leaving group. Y¹ is C

$_{1-6}$ alkylene or C_{2-6} alkenylene group, wherein the alkylene or alkenylene group may be substituted with one or more substituents selected independently from the group consisting of C_{1-6} alkyl group, fluorine group, and fluorinated C_{1-6} alkyl group, further wherein a substitutable carbon atom in the substituent bonding to the alkylene or alkenylene group and another substitutable carbon atom in the alkylene or alkenylene group, or two substitutable carbon atoms in the substituent bonding to the alkylene or alkenylene group may be combined together to form a 3- to 6-membered carbon ring.

- [0037] According to the method shown in Scheme 1, Compound (1a) can be prepared by reacting Compound (2) and Compound (3), in an appropriate solvent or without a solvent, in the presence or absence of a basic compound.
- [0038] The leaving group X^1 used herein includes halogen group such as fluorine, chlorine, bromine, and iodine; substituted sulfonyloxy group such as C_{1-6} alkylsulfonyloxy group (e.g. methanesulfonyloxy, ethanesulfonyloxy), C_{6-14} arylsulfonyloxy group (e.g. benzenesulfonyloxy, p-toluenesulfonyloxy), and C_{7-16} aralkylsulfonyloxy group (e.g. benzylsulfonyloxy); acyloxy group such as acetoxy and benzoyloxy; oxy group substituted with heterocyclyl or aryl such as succinimide, benzotriazole, quinoline, and 4-nitrophenyl; and heterocyclyl such as imidazole.
- [0039] The solvent used herein can be broadly chosen from known solvents unless it negatively affects the reaction. The solvent used herein includes, for example, water; ethers such as dioxane, tetrahydrofuran (THF), diethyl ether, diethylene glycol dimethyl ether (diglyme), and ethylene glycol dimethyl ether; aromatic hydrocarbons such as benzene, toluene, and xylene; halogenated hydrocarbons such as dichloromethane, dichloroethane, chloroform, and carbon tetrachloride; alcohols such as methanol, ethanol, and 2-propanol; ketones such as acetone and methyl ethyl ketone; polar solvents such as N,N-dimethylformamide (DMF), dimethylsulfoxide (DMSO), hexamethylphosphate triamide, and acetonitrile; and a mixture thereof.
- [0040] The basic compound used herein can be broadly chosen from known basic compounds, which includes, for example, an alkali metal hydroxides such as sodium hydroxide, potassium hydroxide, cesium hydroxide, and lithium hydroxide; an alkali metal carbonates such as sodium carbonate, potassium carbonate, cesium carbonate, lithium carbonate, lithium hydrogen carbonate, sodium hydrogen carbonate, and potassium hydrogen carbonate; an acetates such as sodium acetate and potassium acetate; an alkali metals such as sodium and potassium; inorganic salts such as sodium amide, sodium hydride, and potassium hydride; an alkali metal lower alkoxides such as sodium methoxide, sodium ethoxide, and potassium tert-butoxide; an organic bases such as triethylamine, diisopropylethylamine, tripropylamine, pyridine, quinoline, 1,5-diazabicyclo[4.3.0]non-5-ene (DBN), 1,8-diazabicyclo[5.4.0]undec-7-ene (DBU), and 1,4-diazabicyclo[2.2.2]octane (DABCO). These basic compounds may be used as

a single ingredient or in a combination of two or more ingredients.

[0041] If necessary, in the reaction, alkali metal iodide such as potassium iodide and sodium iodide can be used as a reaction accelerator.

[0042] The amount of Compound (3) used herein is generally at least about 0.5 mole, preferably about 0.5 to 10 moles per one mole of Compound (2). The amount of the basic compound used herein is generally about 0.5 to 10 moles, preferably about 0.5 to 6 moles per one mole of Compound (2). The above reaction is carried out generally at 0°C to 250°C, preferably at 0°C to 200°C, under ordinary pressure or increased pressure, and the reaction is completed in about 1 to 80 hours. In addition, the reaction can be carried out under microwave irradiation.

[0043] [Chem.4]

Scheme 2

Wherein R^{1b} to R^{4b} are independently hydrogen atom, halogen, C_{1-6} alkyl group, halogenated C_{1-6} alkyl group, C_{2-6} alkenyl group, C_{1-6} alkoxy group, or halogenated C_{1-6} alkoxy group, provided that one or two of R^{1b} to R^{4b} are hydrogen atoms, but it is not that all of three or four thereof are hydrogen atoms. Y^2 is C_1 alkyl or C_m alkenyl group which has oxo group, wherein the alkyl or alkenyl group may be substituted with one or more substituents selected independently from the group consisting of C_{1-6} alkyl group, halogen, and halogenated C_{1-6} alkyl group, further wherein a substitutable carbon atom in the substituent bonding to the alkyl or alkenyl group and another substitutable carbon atom in the alkyl or alkenyl group, or two substitutable carbon atoms in the substituent bonding to the alkyl or alkenyl group may be combined together to form a 3- to 6-membered carbon ring, provided that the carbon atom to which the oxo group binds is not next to the halogen atom or the oxygen atom between the benzene ring and Y^2 , and the oxo group is not bound to the olefin carbon. R^5 is C_n alkyl group. X^2 is halogen atom. Y^3 is C_{3-6} alkyl or C_{4-6} alkenyl group which has hydroxy group, wherein the alkyl or alkenyl group may be substituted with one or more substituents selected independently from the group consisting of C_{1-6} alkyl group, halogen, and halogenated C_{1-6} alkyl group, further wherein a substitutable carbon atom in the sub-

stituent bonding to the alkyl or alkenyl group and another substitutable carbon atom in the alkyl or alkenyl group, or two substitutable carbon atoms in the substituent bonding to the alkyl or alkenyl group may be combined together to form a 3- to 6-membered carbon ring, provided that the carbon atom to which the hydroxy group binds is not next to the halogen atom or the oxygen atom between the benzene ring and Y³, and the hydroxy group is not bound to the olefin carbon, and the hydroxy group is not primary alcohol. l is an integer of 2 to 5, m is an integer of 3 to 5, and n is an integer of 1 to 4, provided that $l + n \leq 6$, and $m + n \leq 6$.

[0044] According to the method shown in Scheme 2, Compound (1b) having hydroxy group in Y³ can be prepared by reacting Compound (4) having oxo group in Y² with Grignard reagent (R⁵MgX²) or lithium reagent (R⁵Li) in an appropriate inert solvent such as diethyl ether and THF.

[0045] The amount of the Grignard reagent (R⁵MgX²) or lithium reagent (R⁵Li) of formula (5) used herein is generally at least about 0.5 mole, preferably about 3 to 10 moles per one mole of Compound (4). The above reaction is carried out generally at -78°C to room temperature, preferably at 0°C to room temperature, and the reaction is completed in about 1 to 24 hours.

[0046] [Chem.5]

Scheme 3

Wherein R¹ to R⁴ are as defined above. R⁶ and R⁷ are independently hydrogen atom, C₁₋₆ alkyl group, or halogenated C₁₋₆ alkyl group. R⁶ and R⁷ may be combined together at each substitutable carbon atom in R⁶ and R⁷ to form a 3- to 6-membered carbon ring.

[0047] According to the method shown in Scheme 3, Compound (1c) can be prepared by reacting Compound (6) and Compound (7), in an appropriate solvent, in the presence of a basic compound.

[0048] The solvent used herein can be broadly chosen from known solvents unless it negatively affects the reaction. The solvent used herein includes, for example, polar solvents such as DMF, DMSO, and acetonitrile; ketones such as acetone and methyl ethyl ketone; hydrocarbons such as benzene, toluene, xylene, tetralin, and liquid

paraffin; alcohols such as methanol, ethanol, 2-propanol, n-butanol, and tert-butanol; ethers such as THF, dioxane, dipropyl ether, diethyl ether, and diglyme; esters such as methyl acetate, ethyl acetate, isopropyl acetate, and tert-butyl acetate; and a mixture thereof.

- [0049] The basic compound used herein can be broadly chosen from known basic compounds, which includes, for example the basic compounds listed in Scheme 1.
- [0050] The amount of Compound (7) used herein is generally about 0.5 to 5 moles, preferably about 0.5 to 3 moles per one mole of Compound (6). The amount of the basic compound used herein is generally about 0.1 to 5 moles, preferably about 1 to 2 moles, per one mole of Compound (6).
- [0051] The above reaction can be carried out, for example, as follows: Compound (6) is dissolved in a reaction solvent, a basic compound is added to the stirred solution under ice-cold or at room temperature, the reaction mixture is stirred at room temperature to 80°C for 30 minutes to 1 hour, Compound (7) is added thereto, and then the reaction mixture is stirred at generally room temperature to 100°C, preferably at 50 to 80°C, for 30 minutes to 60 hours, preferably 1 to 50 hours.
- [0052] [Chem.6]

Scheme 4

Wherein R^{1c} to R^{4c} are independently hydrogen atom, halogen, OH, CN, C₁₋₆ alkyl group, fluorinated C₁₋₆ alkyl group, C₂₋₆ alkenyl group, C₁₋₆ alkoxy group, or fluorinated C₁₋₆ alkoxy group, provided that one or two of R^{1c} to R^{4c} are hydrogen atoms, but it is not that all of three or four thereof are hydrogen atoms. R⁸ is C₁₋₆ alkyl group. Y¹ is as defined above.

- [0053] According to the method shown in Scheme 4, Compound (1d) can be prepared by reacting Compound (8) and hydrazine, in an appropriate solvent, in the presence or absence of an acidic compound.
- [0054] The solvent used herein is an inert solvent, which includes, for example, alcohols such as methanol, ethanol and 2-propanol; acetic acid; and water; preferably ethanol.
- [0055] The hydrazine used herein is generally a hydrate thereof or a mineral acid salt thereof such as hydrochloride and sulfate. The amount of hydrazine used herein is generally

[0057] [Chem.7]

[0060] The reaction temperature is not limited in specific, which is generally at -60 to

150°C, preferably at -30 to 100°C. The reaction time is generally 10 minutes to 15 hours.

[0061] [Chem.8]

Scheme 6

Wherein R^1 to R^4 are as defined above. Y^6 is C_{1-5} alkylene or C_{2-5} alkenylene group, wherein the alkylene or alkenylene group may be substituted with one or more substituents selected independently from the group consisting of C_{1-6} alkyl group, halogen, and halogenated C_{1-6} alkyl group, further wherein a substitutable carbon atom in the substituent bonding to the alkylene or alkenylene group and another substitutable carbon atom in the alkylene or alkenylene group, or two substitutable carbon atoms in the substituent bonding to the alkylene or alkenylene group may be combined together to form a 3- to 6-membered carbon ring. R^9 is C_{1-6} alkyl group.

[0062] According to the method shown in Scheme 6, Compound (1f) can be prepared by reacting Compound (10) with a hydride reductant in an appropriate solvent.

[0063] The hydride reductant used herein includes, for example, diisobutylaluminum hydride, sodium borohydride, and lithium borohydride-trimethoxyborane. These reductants may be used as a single ingredient or in a combination of two or more ingredients. The amount of the hydride reductant used herein is generally at least equimolar to Compound (1f), preferably in the range of equimolar to 15 times molar.

[0064] The reduction reaction may be carried out in a suitable solvent, for example, water; alcohols such as methanol, ethanol, and 2-propanol; ethers such as THF, diethyl ether, diisopropyl ether, and diglyme; halogenated hydrocarbons such as dichloromethane, chloroform, and carbon tetrachloride; or a mixture thereof, at about -60°C to 150°C, preferably -30°C to 100°C, generally for about 10 minutes to 40 hours.

[0065]

[Chem.9]

Scheme 7

Wherein R^{1d} to R^{4d} are independently a leaving group, hydrogen atom, halogen, OH, CN, C_{1-6} alkyl group, halogenated C_{1-6} alkyl group, C_{2-6} alkenyl group, C_{1-6} alkoxy group, or halogenated C_{1-6} alkoxy group, provided that at least one of R^{1d} to R^{4d} is a leaving group, one or two thereof are hydrogen atoms, but it is not that all of three or four thereof are hydrogen atoms. The leaving group includes chlorine, bromine, iodine, and a substituted sulfonyloxy group. Y is as defined above. R^{1e} to R^{4e} are independently hydrogen atom, halogen, OH, CN, C_{1-6} alkyl group, halogenated C_{1-6} alkyl group, C_{2-6} alkenyl group, C_{1-6} alkoxy group, or halogenated C_{1-6} alkoxy group, provided that at least one of R^{1e} to R^{4e} is CN, one or two thereof are hydrogen atoms, but it is not that all of three or four thereof are hydrogen atoms. The leaving group in Compound (11) is replaced by CN at the same position in Compound (1g).

- [0066] According to the method shown in Scheme 7, Compound (1g) can be prepared by reacting Compound (11) and a cyanating agent, in an appropriate solvent, in the presence of a palladium compound.
- [0067] The solvent used herein includes, for example, ethers such as THF, ethylene glycol dimethyl ether, tert-butyl methyl ether, and 1,4-dioxane; aliphatic hydrocarbons such as hexane, heptane, and octane; aromatic hydrocarbons such as toluene and xylene; alcohols such as methanol and ethanol; acid amides such as DMF and N-methyl-2-pyrrolidone (NMP); sulfoxides such as DMSO; and a mixture thereof, preferably DMF.
- [0068] The cyanating agent used herein includes, for example, zinc cyanide, and the palladium compound used herein include, for example, tetrakis(triphenylphosphine)palladium. The amount of cyanating agent used herein is generally 1 to 5 moles per one mole of Compound (11), and the amount of palladium compound used herein is generally 0.01 to 0.5 moles per one mole of Compound (11).
- [0069] The reaction temperature is generally in the range of 50 to 200°C. The reaction time is generally in the range of 0.5 to 24 hours. In addition, the reaction can be carried out under microwave irradiation.

[0070] [Chem.10]

Scheme 8

Wherein R^{1f} to R^{4f} are independently hydrogen atom, halogen, OH, hydroxy group protected with a protecting group for hydroxy group (hereinafter, this is abbreviated as "protected hydroxy group"), CN, C₁₋₆ alkyl group, halogenated C₁₋₆ alkyl group, C₂₋₆ alkenyl group, C₁₋₆ alkoxy group, or halogenated C₁₋₆ alkoxy group, provided that one or two of R^{1f} to R^{4f} are hydrogen atoms, but it is not that all of three or four thereof are hydrogen atoms. P¹ is a protecting group for hydroxy group. When one or more of R^{1f} to R^{4f} are protected hydroxy group, the protecting group can be removed at the same time of the deprotection of P¹. R¹ to R⁴, and Y are as defined above.

- [0071] The protecting group for hydroxy group used herein is not limited unless it negatively affects the reaction. The protecting group includes, for example, a silyl protecting group (e.g. trimethylsilyl, tert-butyldimethylsilyl, triisopropylsilyl, tert-butyldiphenylsilyl), an acetal protecting group (e.g. tetrahydropyranyl (THP), methoxymethyl (MOM), methylthiomethyl, ethoxyethyl, benzyloxymethyl), and an acyl protecting group (e.g. acetyl, propionyl, pivaloyl, tert-butylacetyl, 2-chloroacetyl, 2-bromoacetyl, trifluoroacetyl, trichloroacetyl, phthalyl, o-nitrophenoxyacetyl, benzoyl, 4-chlorobenzoyl, 4-bromobenzoyl or 4-nitrobenzoyl).
- [0072] According to the method shown in Scheme 8, Compound (15) can be prepared by reacting Compound (13) and Compound (14), in an appropriate solvent, in the presence of the Mitsunobu reagent and a phosphine.
- [0073] The Mitsunobu reagent includes, for example, diethyl azodicarboxylate and bis(2-methoxyethyl) azodicarboxylate. The amount of Mitsunobu reagent used herein is 1 to 10 moles, preferably 1 to 5 moles per one mole of Compound (13) shown in

Scheme 8. The amount of Compound (14) used herein is 1 to 10 moles, preferably 1 to 5 moles per one mole of Compound (13) shown in Scheme 8. The phosphine reagent used herein includes, for example, triphenylphosphine and tributylphosphine. The amount of phosphine reagent used herein is 1 to 10 moles, preferably 1 to 5 moles per one mole of Compound (13) shown in Scheme 8.

- [0074] The solvent used herein is not limited unless it negatively affects the reaction. The preferred solvent used herein includes, for example, toluene, benzene, THF, 1,4-dioxane, DMF, N,N-dimethylacetamide, NMP, DMSO, and a mixture thereof.
- [0075] The reaction temperature is generally at -78 to 200°C, preferably at 0 to 50°C. The reaction time is generally 5 minutes to 3 days, preferably 10 minutes to 10 hours.
- [0076] According to the method shown in Scheme 8, Compound (1h) can be prepared by de-protecting Compound (15).
- [0077] When the protecting group for hydroxy group is a silyl-type protecting group, the de-protection can be carried out by hydrolysis under an acidic condition or by using a fluoride ion. For example, in case of tert-butyldimethylsilyl group selected as the silyl protecting group, the deprotection reaction is carried out with a fluoride ion. Suitable fluoride ion sources include, for example, tetrabutylammonium fluoride and hydrogen fluoride-pyridine, preferably tetrabutylammonium fluoride. The amount of the fluorine compound used herein is 1 to 10 moles, preferably 1 to 5 moles per one mole of Compound (15) shown in Scheme 8.
- [0078] The solvent used herein is not limited unless it negatively affects the reaction. The solvent used herein includes, for example, THF, acetonitrile, and methylene chloride.
- [0079] The deprotection reaction can be carried out at 0°C to a reflux temperature of the used reaction solvent, preferably 0°C to room temperature. The reaction time is generally 5 minutes to 3 days, preferably 10 minutes to 10 hours.
- [0080] When the protecting group for hydroxy group is an acetal protecting group such as a methoxymethyl group, the deprotection can be generally carried out by using an acid hydrolysis condition. The "acid" used in the acid hydrolysis includes, for example, acetic acid, hydrochloric acid and phosphoric acid, preferably hydrochloric acid. The amount of the acid is in the range of suitably 1 to 1000 moles, preferably 1 to 10 moles per one mole of Compound (15) shown in Scheme 8.
- [0081] The solvent used herein is not limited unless it negatively affects the reaction. The solvent used herein includes, for example, dichloromethane, methanol, and water.
- [0082] The reaction time may vary depending on a material compound used herein, reaction temperature, or other factors, but it is suitably in the range of 0.5 hour to 24 hours.
- [0083] When the protecting group for hydroxy group is an acyl-type protecting group, the deprotection can be generally carried out by using a basic hydrolysis condition. The solvent used herein includes, for example, water; alcohols such as methanol, ethanol,

2-propanol, and tert-butanol; ketones such as acetone and methyl ethyl ketone; ethers such as diethyl ether, dioxane, THF, monoglyme, and diglyme; esters such as methyl acetate and ethyl acetate; halogenated hydrocarbons such as chloroform, dichloromethane, dichloroethane, and carbon tetrachloride; DMSO; DMF; hexamethylphosphoramide; and a mixture thereof. The basic compound used herein includes, for example, carbonates such as sodium carbonate, potassium carbonate, sodium hydrogen carbonate, and potassium hydrogen carbonate; and metal hydroxides such as sodium hydroxide, potassium hydroxide, calcium hydroxide, and lithium hydroxide. These basic compounds may be used as a single ingredient or in a combination of two or more ingredients.

[0084] The hydrolysis reaction can proceed generally at 0 to 200°C, preferably at 0 to 150°C, and the reaction is completed generally in about 10 minutes to 50 hours.

[0085] When there are plural protecting groups for hydroxy group in R^{1f} to R^{4f} and P¹, the protecting groups may be the same or different. If the protecting groups are different, the deprotection reaction can be carried out by combining plural deprotection conditions suitable for each protecting group.

[0086] [Chem.11]

Scheme 9

Wherein R^{1g} to R^{4g} are independently hydrogen atom, halogen, protected hydroxy group, CN, C₁₋₆ alkyl group, halogenated C₁₋₆ alkyl group, C₂₋₆ alkenyl group, C₁₋₆ alkoxy group, or halogenated C₁₋₆ alkoxy group, provided that at least one of R^{1g} to R^{4g} is protected hydroxy group, one or two thereof are hydrogen atoms, but it is not that all of three or four thereof are hydrogen atoms. R^{1h} to R^{4h} are independently hydrogen atom, halogen, OH, CN, C₁₋₆ alkyl group, halogenated C₁₋₆ alkyl group, C₂₋₆ alkenyl

group, C₁₋₆ alkoxy group, or halogenated C₁₋₆ alkoxy group, provided that at least one of R^{1h} to R^{4h} is hydroxy group, one or two thereof are hydrogen atoms, but it is not that all of three or four thereof are hydrogen atoms. Protected hydroxy group in Compound (17) is deprotected to OH at the same position in Compound (1i). Y⁴ and Y⁵ are as defined above.

[0087] The reaction of Compound (16) and a hydride reductant can be carried out in a reaction condition similar to the reaction of Scheme 5.

[0088] The deprotection of Compound (17) can be carried out in a reaction condition similar to the reaction of Scheme 8.

[0089] [Chem.12]

Scheme 10

Wherein R^{1a} to R^{4a}, and X¹ are as defined above. Y⁷ is C₂₋₆ alkenyl group, wherein the alkenyl group may be substituted with one or more substituents selected independently from the group consisting of C₁₋₆ alkyl group, halogen, and halogenated C₁₋₆ alkyl group, further wherein a substitutable carbon atom in the substituent bonding to the alkenyl group and another substitutable carbon atom in the alkenyl group, or two substitutable carbon atoms in the substituent bonding to the alkenyl group may be combined together to form a 3- to 6-membered carbon ring. Y⁸ represents a group in which the double bond in the alkenyl group of Y⁷ is converted to an epoxy group Y⁹ represents a group in which the epoxy group of Y⁸ is ring-opened.

[0090] The reaction of Compound (2) and Compound (18) can be carried out in a reaction condition similar to the reaction of Scheme 1.

[0091] According to the method shown in Scheme 10, Compound (20) can be prepared by reacting Compound (19) and an oxidant in an appropriate solvent or without a solvent.

The oxidant used herein includes, for example, m-chloroperbenzoic acid, peracetic acid, oxone, and hydrogen peroxide. The solvent used herein can be broadly chosen from known solvents unless it negatively affects the reaction. The solvent used herein includes, for example, aromatic hydrocarbons such as benzene, toluene, and xylene; aliphatic hydrocarbons such as hexane and heptane; alcohols such as methanol and ethanol; halogenated solvents such as chloroform, dichloromethane, and dichloroethane; nitriles such as acetonitrile and butyronitrile; esters such as ethyl acetate, butyl acetate, and methyl formate; amides such as DMF and N,N-dimethylacetamide; and a mixture thereof.

- [0092] The amount of the oxidant used herein is generally about 1 to 5 moles per one mole of Compound (19). The above reaction is carried out generally at 0°C to 100°C, preferably at 0°C to room temperature, and the reaction is generally completed in about 0.5 to 24 hours.
- [0093] According to the method shown in Scheme 10, Compound (1j) can be prepared by ring-opening Compound (20) under the hydrogenation condition, in an appropriate solvent, in the presence of a palladium compound.
- [0094] The reductant used herein includes, for example, hydrogen and ammonium formate and these reductants may be used as a single ingredient or in a combination of two ingredients.
- [0095] The palladium compound used herein include, for example, palladium-carbon (10 % w/w). The amount of palladium compound used herein is generally 0.01 to 0.5 moles per one mole of Compound (20).
- [0096] The solvent used herein can be broadly chosen from known solvents unless it negatively affects the reaction. The solvent used herein includes, for example, ethers such as dioxane, THF, diethyl ether, diglyme, and ethylene glycol dimethyl ether; halogenated hydrocarbons such as dichloromethane, dichloroethane, chloroform, and carbon tetrachloride; alcohols such as methanol, ethanol, and 2-propanol; polar solvents such as DMF, DMSO and acetonitrile; and a mixture thereof.
- [0097] The above reaction is carried out generally at 0°C to 70°C, preferably at 0°C to room temperature, and the reaction is generally completed in about 0.5 to 24 hours.
- [0098]

[Chem.13]

Scheme 11

Wherein R^1 to R^4 , Y , and P^1 are as defined above.

- [0099] The reaction of Compound (21) and hydrazine can be carried out in a reaction condition similar to the reaction of Scheme 4. The deprotection of Compound (22) can be carried out in a reaction condition similar to the reaction of Scheme 8.
- [0100] The present compound of formula (1) can be prepared according to the above synthetic processes, and it can be also prepared based on the synthetic processes described in the reference examples and examples herein, considering the prior art known at the time of the filing date.
- [0101] If necessary, the starting materials and intermediates shown in the above schemes can be protected with a suitable protecting group before starting the reaction, and then the protecting group can be removed in a known manner after the reaction.
- [0102] Each product prepared according to the above schemes can be purified from each reaction mixture as follows, for example, the reaction mixture is cooled, the reaction mixture is treated in an isolation procedure such as filtration, concentration, and extraction to isolate the crude product, and the crude product is purified in a conventional manner of purification such as column chromatography and recrystallization.
- [0103] The starting materials and products shown in each scheme also include a solvate thereof as an additional form, for example, a hydrate and ethanolate.
- [0104] The starting materials and products shown in each scheme may be used in a preferred salt form. Each product in each step can be used in its next step without isolation.
- [0105] The present compound (1), intermediates prepared in the above schemes, and starting

materials thereof may include geometric isomer, stereoisomer, tautomer and optical isomer thereof.

- [0106] Each isomer can be isolated by a conventional manner. For example, racemic compounds can be divided by a general optical resolution such as crystallization and chromatography to optically pure isomers thereof. In addition, an optically pure compound can be also prepared from an appropriate material.
- [0107] The compound of the present invention can be a useful agent for treating tumor, particularly malignant tumor, in more detail, the compound can be a novel agent for treating and/or preventing childhood brain tumor selected from the group consisting of astrocytoma, malignant medulloblastoma, germ cell tumor, craniopharyngioma, and ependymoma; adult brain tumor selected from the group consisting of glioma, meningioma, pituitary adenoma, and nerve sheath tumor; head and neck cancer selected from the group consisting of maxillary sinus cancer, pharyngeal cancer (e.g. nasopharyngeal cancer, oropharyngeal cancer, hypopharyngeal cancer), laryngeal cancer, oral cancer (e.g. lip cancer, tongue cancer), and salivary gland cancer (e.g. parotid gland cancer); thoracic cancer and tumor selected from the group consisting of small cell lung cancer, non-small-cell lung cancer, thymoma, and mesothelioma; gastrointestinal cancer and tumor selected from the group consisting of esophageal cancer, liver cancer, primary liver cancer, gallbladder cancer, bile duct cancer, gastric cancer, colorectal cancer (e.g. rectal cancer, anal cancer), pancreatic cancer, and pancreatic endocrine tumor; urologic cancer and tumor selected from the group consisting of penile cancer, renal pelvic/ureter cancer, renal cell cancer, testicular tumor (also referred to as testicular neoplasm), prostate cancer, bladder cancer, Wilms' tumor, and urothelial carcinoma; gynecologic cancer and tumor selected from the group consisting of vulvar cancer, cervical cancer, uterine body cancer, endometrial cancer, uterine sarcoma, choriocarcinoma, vaginal cancer, breast cancer, ovarian cancer, and ovarian germ cell tumor; adult and childhood soft tissue sarcoma; bone tumor selected from the group consisting of osteosarcoma and Ewing's tumor; endocrine tissue cancer and tumor selected from the group consisting of adrenocortical carcinoma and thyroid cancer; malignant lymphoma and leukemia selected from the group consisting of malignant lymphoma, non-Hodgkin's lymphoma, Hodgkin's disease, multiple myeloma, plasma cell neoplasm, acute myeloid leukemia, acute lymphoblastic leukemia, adult T-cell leukemia-lymphoma, chronic myeloid leukemia, and chronic lymphocytic leukemia; or skin cancer and tumor selected from the group consisting of chronic myeloproliferative disorder, malignant melanoma, squamous cell carcinoma, basal cell carcinoma, and mycosis fungoides. The administration route of the present compound may be selected from oral administration, parenteral administration or rectal administration, and the daily dosage may vary depending on the compound structure,

the administration route, the condition/age of patients, etc. For example, in case of oral administration, the present compound may be administered to a human being or a mammal in a dosage of generally about 0.01 μg - 10 mg, preferably about 1 μg - 5 mg, per kg of its body weight, in one to several divided doses. For example, in case of parenteral administration such as intravenous injection, the present compound may be administered to a human being or a mammal in a dosage of generally about 0.01 μg - 10 mg, preferably about 1 μg - 5 mg, per kg of its body weight.

[0108] The dosage form in the present invention includes tablet, capsule, granule, powder, syrup, suspension, injection, suppository, eyedrop, ointment, liniment, patch, and inhalant. These dosage forms can be prepared in a conventional manner. If the dosage form is a liquid one, it may be a formulation to prepare a solution or suspension in use by mixing it with water, appropriate water-solution, or other appropriate solvent. The tablet and the granule may be coated in a well-known manner. Furthermore, these dosage forms may comprise another therapeutically-useful ingredient.

[0109] In case that the present compound is formulated into a single dosage form, the dosage form may include the present compound in 0.1 - 70 % (w/w) per the whole composition, but the present invention is not limited thereto. Preferably, it is 5 - 40 % (w/w) per the whole composition.

Examples

[0110] The present invention is explained in more detail in the following by referring to Reference examples, Examples and Test, however, the present invention should not be limited thereto.

[0111] (Reference example 1)

Production of (4-bromo-2-chloro-6-methylphenoxy)-tert-butyltrimethylsilane

[Chem.14]

To a mixture of 4-bromo-2-chloro-6-methylphenol (13.3 g) in DMF (120 mL) were added imidazole (6.1 g) and tert-butylchlorodimethylsilane (10.9 g), and the mixture was stirred at room temperature overnight. The solvent was removed, and water was added to the residue. The mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel

column chromatography (heptane : ethyl acetate = 100 : 0 to 99 : 1) to afford the title compound as a colorless oil (20.0 g).

¹H-NMR (CDCl₃) δ: 0.24 (6H, s), 1.03 (9H, s), 2.22 (3H, s), 7.14-7.17 (1H, m), 7.30-7.33 (1H, m).

[0112] (Reference example 2)

Production of methyl 2-(4-bromo-2-chloro-6-fluorophenoxy)acetate

[Chem.15]

To a mixture of 4-bromo-2-chloro-6-fluorophenol (2.0 g) and potassium carbonate (1.47 g) in DMF (15 mL) was added methyl bromoacetate (0.924 mL), and the mixture was stirred at room temperature for 2 hours. To the reaction mixture was added water, and the mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 80 : 20 to 60 : 40) to afford the title compound as a colorless oil (2.53 g).

¹H-NMR (CDCl₃) δ: 3.81 (3H, s), 4.73 (2H, s), 7.20 (1H, dd, J = 10.4, 2.3 Hz), 7.33-7.37 (1H, m).

[0113] The following compounds were prepared from each appropriate starting material in a similar manner to Reference example 2.

(Reference example 3)

Methyl 2-(4-bromo-2-fluoro-6-methylphenoxy)acetate

[Chem.16]

¹H-NMR (CDCl₃) δ: 2.33 (3H, s), 3.79 (3H, s), 4.69 (2H, d, J = 1.0 Hz), 7.06-7.11 (2H, m).

- [0114] (Reference example 4)
Methyl 2-(4-bromo-3-fluoro-2-methylphenoxy)acetate
 [Chem.17]

¹H-NMR (CDCl₃) δ: 2.24 (3H, d, J = 2.3 Hz), 3.80 (3H, s), 4.65 (2H, s), 6.42 (1H, dd, J = 8.9, 1.2 Hz), 7.28 (1H, t, J = 8.9 Hz).

- [0115] (Reference example 5)
Production of methyl 2-(4-bromo-2-chloro-3-fluorophenoxy)acetate
 [Chem.18]

To a mixture of 2-chloro-3-fluorophenol (2.6 g) in acetic acid (30 mL) was added pyridinium bromide perbromide (6.0 g), and the mixture was stirred at room temperature for 4.5 hours. To the reaction mixture was added aqueous sodium thiosulfate, and the mixture was extracted with toluene. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed to afford a yellow oil (3.4 g). This oil was dissolved in DMF (30 mL), and potassium carbonate (4.9 g) and methyl bromoacetate (2.0 mL) were added to the mixture. The mixture was stirred at room temperature for 30 minutes. To the reaction mixture was added water, and the mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 100 : 0 to 84 : 16) to afford the title compound as a colorless oil (2.3 g).

¹H-NMR (CDCl₃) δ: 3.81 (3H, s), 4.73 (2H, s), 6.56 (1H, dd, J = 9.0, 1.8 Hz), 7.37 (1H, dd, J = 9.0, 7.4 Hz).

[0116] (Reference example 6)

Production of 1-[(4-bromo-2-chloro-6-fluorophenoxy)methyl]cyclopropan-1-ol

[Chem.19]

Under an argon atmosphere, to a mixture of methyl 2-(4-bromo-2-chloro-6-fluorophenoxy)acetate (Reference example 2, 2.53 g) in THF (30 mL) was added tetraisopropyl orthotitanate (2.49 mL) at 0°C. Ethylmagnesium bromide (3.0 M diethyl ether solution, 7.65 mL) was slowly added thereto at 0°C, and the reaction mixture was stirred at room temperature for one hour. To the reaction mixture was added 1 M hydrochloric acid at 0°C, and the mixture was extracted with ethyl acetate. The organic layer was washed with brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 100 : 0 to 80 : 20) and then by amino silica gel column chromatography (methylene chloride : methanol = 100 : 0 to 90 : 10) to afford the title compound as a colorless oil (1.15 g).

¹H-NMR (CDCl₃) δ: 0.60-0.66 (2H, m), 0.89-0.95 (2H, m), 2.95 (1H, s), 4.14 (2H, s), 7.21 (1H, dd, J = 9.8, 2.2 Hz), 7.33-7.37 (1H, m).

[0117] The following compounds were prepared from each appropriate starting material in a similar manner to Reference example 6.

[0136] (Reference example 26)

Production of

2,3-difluoro-4-{[1-(triethylsilyloxy)cyclopropyl]methoxy}benzaldehyde

[Chem.39]

Under an argon atmosphere, to a mixture of {1-[(2,3-difluorophenoxy)methyl]cyclopropyloxy}triethylsilane (Reference example 14, 1.4 g) and 2,2,6,6-tetramethylpiperidine (0.8 mL) in THF (10 mL) at -78°C was added n-butyl lithium (1.6 M n-hexane solution, 2.9 mL). The mixture was stirred at -78°C for 30 minutes, and then DMF (0.4 mL) was added thereto. The reaction mixture was stirred at -78°C for 30 minutes, and then at room temperature for 30 minutes. To the reaction mixture was added aqueous ammonium chloride at 0°C , and the mixture was extracted with ethyl acetate. The organic layer was washed with brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 94 : 6 to 76 : 24) to afford the title compound as a colorless oil (1.3 g). $^1\text{H-NMR}$ (CDCl_3) δ : 0.60-0.69 (6H, m), 0.74-0.79 (2H, m), 0.86-0.96 (11H, m), 4.11 (2H, s), 6.79-6.86 (1H, m), 7.57-7.64 (1H, m), 10.20 (1H, s).

[0137] (Reference example 27)Production of 3-bromo-2-fluoro-4-methoxybenzaldehyde

[Chem.40]

A mixture of 2-bromo-3-fluoroanisole (25 g), hexamethylenetetramine (34.2 g), and trifluoroacetic acid (150 mL) was stirred at 90°C for 27 hours. The reaction mixture was allowed to cool to room temperature, and then 1 M hydrochloric acid was added to the reaction mixture. The reaction mixture was extracted with ethyl acetate, and then the organic layer was concentrated to about half of its volume. To the concentrated

organic layer was added aqueous sodium hydroxide, and then the organic layer was separated from the mixture and washed with brine. The organic layer was dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 94 : 6 to 73 : 27) to afford the title compound as a white solid (22.3 g).

$^1\text{H-NMR}$ (CDCl_3) δ : 4.01 (3H, s), 6.82 (1H, d, $J = 8.8$ Hz), 7.85 (1H, dd, $J = 8.8, 7.7$ Hz), 10.22 (1H, d, $J = 0.7$ Hz).

[0138] (Reference example 28)

Production of 2-fluoro-4-methoxy-3-methylbenzaldehyde

[Chem.41]

To a mixture of 3-bromo-2-fluoro-4-methoxybenzaldehyde (Reference example 27, 6.0 g) in 1,2-dimethoxyethane (90 mL) were added methyl boronate (4.6 g), tripotassium phosphate (16.4 g) and [1,1'-bis(diphenylphosphino)ferrocene]palladium dichloride complex with methylene chloride (1.1 g). The reaction mixture was refluxed for 24 hours under an argon atmosphere. The reaction mixture was allowed to cool to room temperature, and then ethyl acetate was added thereto. The mixture was filtered through a Celite pad, and then aqueous ammonium chloride was added to the filtrate. The organic layer was separated from the mixture, washed with brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 100 : 0 to 73 : 27) to afford the title compound as a white solid (3.8 g).

$^1\text{H-NMR}$ (CDCl_3) δ : 2.15 (3H, d, $J = 2.2$ Hz), 3.92 (3H, s), 6.74 (1H, d, $J = 8.7$ Hz), 7.73 (1H, t, $J = 8.7$ Hz), 10.22 (1H, s).

[0139] (Reference example 29)

Production of 3-chloro-2-fluoro-4-hydroxy-5-methylbenzaldehyde

[Chem.42]

To a mixture of 2-fluoro-4-hydroxy-5-methylbenzaldehyde (2.7 g) in acetic acid (5 mL) was added sulfuryl chloride (2.8 mL), and the mixture was stirred at room temperature for 3 hours. Sulfuryl chloride (0.7 mL) was added thereto, and the reaction mixture was stirred at room temperature further for one hour. To the reaction mixture was added ice in water at 0°C, and the obtained precipitates were collected on a filter. The collected precipitates were dissolved in ethyl acetate, the mixture was dried over anhydrous sodium sulfate and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 88 : 12 to 67 : 33) to afford the title compound as a white solid (1.3 g). ¹H-NMR (DMSO-d₆) δ: 2.23 (3H, s), 7.56 (1H, dd, J = 7.9, 0.7 Hz), 10.02 (1H, s), 10.98 (1H, brs).

[0140] (Reference example 30)Production of 5-chloro-2-fluoro-4-methoxy-3-methylbenzaldehyde

[Chem.43]

Under an argon atmosphere, to a mixture of 1-chloro-4-fluoro-2-methoxy-3-methylbenzene (2.6 g) in methylene chloride (30 mL) were added titanium tetrachloride (8.1 mL) and dichloromethyl methyl ether (2.7 mL) at 0°C. The reaction mixture was stirred at 0°C for 1.5 hours, and then poured into ice in water. The mixture was stirred at room temperature for one hour, and then extracted with ethyl acetate. The organic layer was washed with brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 100 : 0 to

90 : 10) to afford the title compound as a white solid (2.6 g).

$^1\text{H-NMR}$ (CDCl_3) δ : 2.28 (3H, d, $J = 2.4$ Hz), 3.91 (3H, s), 7.75 (1H, d, $J = 7.3$ Hz), 10.24 (1H, s).

[0141] (Reference example 31)

Production of 3-chloro-2,4-dimethoxybenzaldehyde

[Chem.44]

A suspension of 3-chloro-2,4-dihydroxybenzaldehyde (3.35 g), methyl iodide (12.1 mL), and potassium carbonate (26.8 g) in acetone (70 mL) was stirred at 40°C overnight. The reaction mixture was filtered through a Celite pad, and the filtrate was concentrated. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 85 : 15) to afford the title compound as a pale yellow solid (2.57 g).

$^1\text{H-NMR}$ (CDCl_3) δ : 3.99 (3H, s), 4.01 (3H, s), 6.84 (1H, d, $J = 9.0$ Hz), 7.79-7.82 (1H, m), 10.24 (1H, s).

[0142] (Reference example 32)

Production of 3-bromo-5-chloro-4-(methoxymethoxy)benzaldehyde

[Chem.45]

To a mixture of 3-Bromo-5-chloro-4-hydroxybenzaldehyde (1.00 g) in dichloroethane (20 mL) were added N,N -diisopropylethylamine (2.23 mL) and chloromethyl methyl ether (0.645 mL), and the mixture was refluxed overnight. The

reaction mixture was concentrated, water was added to the residue, and then the mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 83 : 17 to 67 : 33) to afford the title compound as a white solid (920 mg).

$^1\text{H-NMR}$ (CDCl_3) δ 3.72 (3H, s), 5.29 (2H, s), 7.87 (1H, d, $J = 2.0$ Hz), 8.00 (1H, d, $J = 2.0$ Hz), 9.87 (1H, s).

[0143] The following compounds were prepared from each appropriate starting material in a similar manner to Reference example 32.

$^1\text{H-NMR}$ (CDCl_3) δ : 2.34-2.36 (3H, m), 3.65 (3H, s), 5.20 (2H, s), 7.62 (1H, dd, $J = 7.6, 0.7$ Hz), 10.26 (1H, s).

[0148] (Reference example 38)Production of

1-[4-(tert-butyldimethylsilyloxy)-3-chloro-5-methylphenyl]propan-1-one

[Chem.51]

Under an argon atmosphere, to a mixture of (4-bromo-2-chloro-6-methylphenoxy)-tert-butyldimethylsilane (Reference example 1, 10.0 g) in THF (100 mL) at -78°C was added dropwise n-butyl lithium (2.65 M n-hexane solution, 11.8 mL). The reaction mixture was stirred at the same temperature for 30 minutes, and then N,N-dimethylpropanamide (3.9 mL) was added thereto. The reaction mixture was stirred at the same temperature for 30 minutes and then at room temperature for 2 hours. To the reaction mixture at -78°C was added aqueous ammonium chloride to quench the reaction. The mixture was extracted with ethyl acetate, and the organic layer was washed with brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 100 : 0 to 91 : 9) to afford the title compound as a pale yellow oil (6.3 g).

$^1\text{H-NMR}$ (CDCl_3) δ : 0.28 (6H, s), 1.04 (9H, s), 1.20 (3H, t, $J = 7.3$ Hz), 2.29 (3H, s), 2.92 (2H, q, $J = 7.3$ Hz), 7.67 (1H, d, $J = 2.1$ Hz), 7.81 (1H, d, $J = 2.1$ Hz).

[0149] (Reference example 39)Production of methyl

4-[4-(tert-butyl)dimethylsilyloxy]-3-chloro-5-methylphenyl]-3-methyl-4-oxobutanoate
[Chem.52]

Under an argon atmosphere, to a mixture of 1-[4-(tert-butyl)dimethylsilyloxy]-3-chloro-5-methylphenyl]propan-1-one (Reference example 38, 6.3 g) in THF (100 mL) at -78°C was added dropwise lithium diisopropylamide (2.0 M, a mixed solution of THF/heptane/ethylbenzene, 15.0 mL). The mixture was stirred at the same temperature for one hour, and then methyl bromoacetate (2.9 mL) was added thereto. The reaction mixture was stirred at -78°C for 15 minutes, and then at room temperature overnight. The reaction mixture was cooled on ice-methanol bath, and then aqueous ammonium chloride was added thereto. The mixture was extracted with ethyl acetate, and the organic layer was washed with brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 100 : 0 to 82 : 18) to afford the title compound as a pale yellow oil (2.7 g).

¹H-NMR (CDCl₃) δ: 0.28 (6H, s), 1.04 (9H, s), 1.21 (3H, d, J = 7.1 Hz), 2.30 (3H, s), 2.44 (1H, dd, J = 16.8, 5.7 Hz), 2.94 (1H, dd, J = 16.8, 8.5 Hz), 3.65 (3H, s), 3.80-3.90 (1H, m), 7.70 (1H, d, J = 2.3 Hz), 7.85 (1H, d, J = 2.3 Hz).

[0150] The following compound was prepared from the appropriate starting material in a similar manner to Reference example 39.

(Reference example 40)

Methyl 4-(3,5-difluoro-4-methoxyphenyl)-3-methyl-4-oxobutanoate

[Chem.53]

¹H-NMR (CDCl₃) δ: 1.21 (3H, d, J = 7.2 Hz), 2.46 (1H, dd, J = 17.0, 5.3 Hz), 2.96 (1H, dd, J = 17.0, 9.0 Hz), 3.65 (3H, s), 3.73-3.85 (1H, m), 4.11 (3H, t, J = 1.6 Hz), 7.52-7.60 (2H, m).

[0151] (Reference example 41)

Production of methyl

4-[3-bromo-5-chloro-4-(methoxymethoxy)phenyl]-3-methyl-4-oxobutanoate

[Chem.54]

Under an argon atmosphere, to

3-bromo-5-chloro-4-(methoxymethoxy)benzaldehyde (Reference example 32, 885 mg) were added lithium chloride (7 mg) and trimethylsilyl cyanide (0.509 mL), and the mixture was stirred at 50°C for 2 hours. THF (30 mL) was added to the mixture to dissolve the mixture, and then the reaction mixture was cooled to -78°C. To the mixture was slowly added lithium diisopropylamide (2.0 M, a mixed solution of THF/heptane/ethylbenzene, 1.90 mL), and the mixture was stirred at -78°C for 30 minutes. Methyl crotonate (0.369 mL) was added to the reaction mixture, and then the mixture was stirred at the same temperature for 2 hours. To the reaction mixture was added water, and the mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The residue was purified by silica gel column chromatography (heptane : ethyl acetate = 83 : 17 to 67 : 33) to afford the title compound as a pale yellow oil (1.15 g).

¹H-NMR (CDCl₃) δ: 1.21 (3H, d, J = 7.1 Hz), 2.46 (1H, dd, J = 17.1, 5.1 Hz), 2.96 (1H, dd, J = 17.1, 9.0 Hz), 3.65 (3H, s), 3.71 (3H, s), 3.74-3.87 (1H, m), 5.26 (2H, s), 7.97 (1H, d, J = 2.0 Hz), 8.10 (1H, d, J = 2.0 Hz).

[0152] The following compounds were prepared from each appropriate starting material in a similar manner to Reference example 41.

(Reference example 42)

Methyl 4-(3-chloro-5-fluoro-4-methoxyphenyl)-3-methyl-4-oxobutanoate

[0165] (Reference example 55)Production of methyl

4-{3-chloro-5-fluoro-4-[(1-hydroxycyclopropyl)methoxy]phenyl}-3-methyl-4-oxobutanoate

[Chem.68]

Under an argon atmosphere, to

3-chloro-5-fluoro-4-[[1-(triethylsilyloxy)cyclopropyl]methoxy]benzaldehyde (Reference example 20, 873 mg) were added trimethylsilyl cyanide (0.391 mL) and lithium chloride (6 mg), and the mixture was stirred at 50°C for 2 hours. The mixture was allowed to cool to room temperature, and THF (10 mL) was added to the mixture. The mixture was stirred at -78°C. At the same temperature, lithium diisopropylamide (2.0 M, a mixed solution of THF/heptane/ethylbenzene, 1.34 mL) was added to the mixture, and the mixture was stirred for 30 minutes. To the mixture was added methyl crotonate (0.284 mL) at -78°C, and the mixture was stirred for 2 hours. Water was added to the mixture, and the mixture was extracted with ethyl acetate. The organic layer was washed with brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The residue was dissolved in THF (10 mL), and tetrabutylammonium fluoride (1.0 M THF solution, 2.92 mL) was added thereto. The reaction mixture was stirred at room temperature for one hour, and water was added thereto. The mixture was extracted with ethyl acetate. The organic layer was washed with brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 90 : 10 to 60 : 40) to afford the title compound as a pale yellow oil (352 mg).

¹H-NMR (CDCl₃) δ: 0.63-0.69 (2H, m), 0.92-0.98 (2H, m), 1.22 (3H, d, J = 7.1 Hz), 2.47 (1H, dd, J = 17.1, 5.1 Hz), 2.95 (1H, s), 2.98 (1H, dd, J = 17.1, 9.0 Hz), 3.65 (3H, s), 3.76-3.86 (1H, m), 4.27 (2H, s), 7.67 (1H, dd, J = 11.4, 2.1 Hz), 7.83-7.85 (1H, m).

[0172] (Reference example 62)

Production of 4-(3,5-dichloro-4-hydroxyphenyl)-3-methyl-4-oxobutanoic acid

[Chem.75]

Under an argon atmosphere, to 3,5-dichloro-4-(methoxymethoxy)benzaldehyde (Reference example 34, 3.28 g) were added trimethylsilyl cyanide (2.25 mL) and lithium chloride (30 mg), and the mixture was stirred at 50°C for 2 hours. The mixture was allowed to cool to room temperature, and THF (40 mL) was added to the mixture. Lithium diisopropylamide (2.0 M, a mixed solution of THF/heptane/ethylbenzene, 7.67 mL) was added to the mixture at -78°C, and the mixture was stirred for 30 minutes at the same temperature. To the mixture was added methyl crotonate (1.63 mL) at -78°C, and the mixture was stirred for 2 hours. To the reaction mixture was added water, and the mixture was extracted with ethyl acetate. The organic layer was washed with brine, dried over anhydrous sodium sulfate. The solvent was removed and the obtained residue was dissolved in THF (40 mL), and tetrabutylammonium fluoride (1.0 M THF solution, 16.7 mL) was added to the solution. The reaction mixture was stirred at room temperature for one hour. And then, to the reaction mixture was added water, and the mixture was extracted with ethyl acetate. The organic layer was washed with brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was

removed. The residue was purified by silica gel column chromatography (heptane : ethyl acetate = 90 : 10 to 70 : 30), and the desired fractions were concentrated. The residue was added 1 M aqueous sodium hydroxide, and the aqueous solution was washed with methylene chloride. The aqueous layer was acidified with 6 M hydrochloric acid, and then the mixture was extracted with methylene chloride. The organic layer was washed with brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed to afford the title compound as a white solid (1.16 g).

¹H-NMR (CDCl₃) δ: 1.23 (3H, d, J = 7.3 Hz), 2.51 (1H, dd, J = 17.2, 5.0 Hz), 3.01 (1H, dd, J = 17.2, 8.9 Hz), 3.72-3.85 (1H, m), 7.92 (2H, s).

[0173] (Reference example 63)

Production of 4-(2-fluoro-4-methoxy-3-methylphenyl)-3-methyl-4-oxobutanoic acid

[Chem.76]

To a mixture of methyl

4-(2-fluoro-4-methoxy-3-methylphenyl)-3-methyl-4-oxobutanoate (Reference example 50, 7.8 g) in ethanol (60 mL) was added 5 M aqueous sodium hydroxide (17.5 mL), and the mixture was stirred at room temperature for one hour. The reaction mixture was diluted with water, and the mixture was acidified with 6 M hydrochloric acid at 0°C. The mixture was extracted with ethyl acetate. The organic layer was washed with brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed to afford the title compound as a white solid (7.9 g).

¹H-NMR (DMSO-d₆) δ: 1.08 (3H, d, J = 7.1 Hz), 2.10 (3H, d, J = 1.8 Hz), 2.36 (1H, dd, J = 16.8, 5.2 Hz), 2.69 (1H, dd, J = 16.8, 8.9 Hz), 3.58-3.70 (1H, m), 3.90 (3H, s), 6.97 (1H, d, J = 8.8 Hz), 7.71 (1H, t, J = 8.8 Hz), 12.13 (1H, s).

[0174] The following compounds were prepared from each appropriate starting material in a similar manner to Reference example 63.

(Reference example 64)

4-(3-Bromo-2-fluoro-4-methoxyphenyl)-3-methyl-4-oxobutanoic acid

[Chem.77]

Production of 4-(3-chloro-4-hydroxy-5-methylphenyl)-3-methyl-4-oxobutanoic acid

[Chem.84]

To a mixture of methyl

4-[4-(tert-butyldimethylsilyloxy)-3-chloro-5-methylphenyl]-3-methyl-4-oxobutanoate (Reference example 39, 500 mg) in methanol (10 mL) was added 5 M aqueous sodium hydroxide (0.520 mL). The reaction mixture was stirred at room temperature overnight, and then 5M aqueous sodium hydroxide (0.260 mL) was added to the reaction mixture. The reaction mixture was stirred at room temperature for 3 hours, and then at 50°C for 2 hours. The reaction mixture was concentrated. To the obtained residue was added diethyl ether, and then the mixture was extracted with water. The separated aqueous layer was acidified with 6 M hydrochloric acid, and then the mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed to afford the title compound as a pale yellow solid (317 mg).

¹H-NMR (DMSO-d₆) δ: 1.06 (3H, d, J = 7.1 Hz), 2.27 (3H, s), 2.36 (1H, dd, J = 17.1, 4.9 Hz), 2.68 (1H, dd, J = 17.1, 9.5 Hz), 3.75-3.88 (1H, m), 7.74-7.75 (1H, m), 7.80 (1H, d, J = 2.0 Hz), 10.12 (1H, brs), 12.13 (1H, brs).

[0182] (Reference example 72)

Production of

6-[3-chloro-2-fluoro-4-(methoxymethoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.85]

To a mixture of methyl 4-[3-chloro-2-fluoro-4-(methoxymethoxy)-5-methylphenyl]-3-methyl-4-oxobutanoate (Reference example 54, 2.91 g) in ethanol (35 mL) was added 5 M aqueous sodium hydroxide (4.37 mL), and the reaction mixture was stirred at room temperature for 30 minutes. After cooling the reaction mixture at 0°C, the reaction mixture was acidified with 6 M hydrochloric acid, and the mixture was extracted with ethyl acetate. The organic layer was washed with brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed to afford a yellow oil (2.96 g). The oil was dissolved in ethanol (30 mL), and hydrazine monohydrate (1.3 mL) and acetic acid (1.5 mL) were added to the solution. The mixture was refluxed for 2 hours. The reaction mixture was allowed to cool to room temperature, saturated aqueous sodium bicarbonate was added thereto at 0°C, and then the mixture was extracted with ethyl acetate. The organic layer was washed with brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 77 : 23 to 47 : 53) to afford the title compound as a white solid (1.65 g).

¹H-NMR (DMSO-d₆) δ: 1.05 (3H, d, J = 7.2 Hz), 2.26 (1H, dd, J = 16.7, 3.8 Hz), 2.29 (3H, s), 2.70 (1H, dd, J = 16.7, 6.8 Hz), 3.10-3.20 (1H, m), 3.56 (3H, s), 5.13 (2H, s), 7.45 (1H, dd, J = 8.5, 0.5 Hz), 11.08 (1H, s).

[0183] (Reference example 73)

Production of

6-(2-fluoro-4-methoxy-3-methylphenyl)-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.86]

To a mixture of 4-(2-fluoro-4-methoxy-3-methylphenyl)-3-methyl-4-oxobutanoic acid (Reference example 63, 4.6 g) in ethanol (60 mL) were added hydrazine monohydrate (1.3 mL) and acetic acid (1.6 mL), and then the mixture was refluxed for 2 hours. The reaction mixture was allowed to cool to room temperature, and the obtained precipitates were collected on a filter to afford the title compound as a white solid (2.4 g).

¹H-NMR (DMSO-d₆) δ: 1.03 (3H, d, J = 7.2 Hz), 2.08 (3H, d, J = 2.2 Hz), 2.23 (1H,

dd, J = 16.8, 3.7 Hz), 2.66 (1H, dd, J = 16.8, 6.8 Hz), 3.07-3.17 (1H, m), 3.85 (3H, s), 6.88 (1H, d, J = 8.8 Hz), 7.40 (1H, t, J = 8.8 Hz), 10.92 (1H, s).

[0184] The following compounds were prepared from each appropriate starting material in a similar manner to Reference example 73.

[0207] (Reference example 97)

Production of

6-(3-chloro-2,4-dihydroxyphenyl)-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.110]

Under an argon atmosphere, to a mixture of 6-(3-chloro-2,4-dimethoxyphenyl)-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Reference example 78, 2.55 g) in methylene chloride (100 mL) was added dropwise boron tribromide (1 M methylene chloride solution, 45.1 mL) at 0°C. The mixture was stirred at room temperature for 3 days. The reaction was quenched by adding methanol slowly at 0°C, and then the solvent was removed. The residue was diluted with ethyl acetate, washed with water and brine, dried over anhydrous sodium sulfate, and filtrated. And, the solvent was removed. The mixture was dissolved in DMF (15 mL), lithium chloride (1.91 g) was added thereto. The mixture was stirred at 240°C under microwave irradiation for 30 minutes. To the reaction mixture was added water, and the mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 67 : 33 to 33 : 67), and then recrystallized from ethanol to afford the title compound as a white solid (1.21 g).

¹H-NMR (DMSO-d₆) δ: 1.10 (3H, d, J = 7.3 Hz), 2.27 (1H, d, J = 16.1 Hz), 2.78 (1H, dd, J = 16.7, 6.7 Hz), 3.41-3.56 (1H, m), 6.57 (1H, d, J = 8.9 Hz), 7.42 (1H, d, J = 8.9 Hz), 10.67 (1H, brs), 11.07 (1H, s), 13.03 (1H, s).

[0208] (Reference example 98)

Production of

6-[4-hydroxy-2-(methoxymethoxy)-3-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.111]

A mixture of

6-[4-benzyloxy-2-(methoxymethoxy)-3-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Reference example 83, 1.55 g) and palladium-carbon (10% w/w, 100 mg) in ethanol/THF (1 : 1, 40 mL) was allowed to be under a hydrogen atmosphere. The mixture was stirred at room temperature for 2 hours, and then stirred at 40°C for 2 hours. The mixture was filtered through a Celite pad, and the filtrate was concentrated. The residual solid was washed by trituration with diethyl ether, and then collected on a filter to afford the title compound as a white solid (1.13 g).

¹H-NMR (DMSO-d₆) δ: 0.90 (3H, d, J = 7.1 Hz), 2.07 (3H, s), 2.21 (1H, dd, J = 16.7, 4.8 Hz), 2.63 (1H, dd, J = 16.6, 6.8 Hz), 3.09-3.20 (1H, m), 3.41 (3H, s), 4.87-4.92 (2H, m), 6.64 (1H, d, J = 8.3 Hz), 6.96 (1H, d, J = 8.3 Hz), 9.73 (1H, s), 10.76 (1H, s).

[0209] The following compound was prepared from the appropriate starting material in a similar manner to Reference example 98.

(Reference example 99)

6-[3-Chloro-4-hydroxy-2-(methoxymethoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.112]

¹H-NMR (CDCl₃) δ: 1.08 (3H, d, J = 7.3 Hz), 2.42 (1H, dd, J = 17.0, 4.6 Hz), 2.79 (1H, dd, J = 17.0, 7.0 Hz), 3.27-3.39 (1H, m), 3.54 (3H, s), 5.02 (1H, d, J = 5.6 Hz), 5.14 (1H, d, J = 5.6 Hz), 5.84 (1H, brs), 6.88 (1H, d, J = 8.5 Hz), 7.19 (1H, d, J = 8.5 Hz).

Hz), 8.47 (1H, s).

[0210] (Reference example 100)

6-[3-Bromo-2-fluoro-4-(methoxymethyloxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.113]

To a mixture of

6-(3-bromo-2-fluoro-4-hydroxyphenyl)-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Reference example 94, 2.37 g) in methylene chloride (30 mL) were added N,N-diisopropylethylamine (2.06 mL) and chloromethyl methyl ether (1.16 mL), and then the mixture was stirred at room temperature for 3 hours. To the reaction mixture was added water, and the mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 80 : 20 to 67 : 33) to afford the title compound as a white solid (1.97 g).

¹H-NMR (DMSO-d₆) δ: 1.04 (3H, d, J = 7.3 Hz), 2.25 (1H, dd, J = 16.9, 3.7 Hz), 2.69 (1H, dd, J = 16.9, 6.8 Hz), 3.08-3.20 (1H, m), 3.42 (3H, s), 5.38 (2H, s), 7.12 (1H, dd, J = 8.8, 1.2 Hz), 7.59 (1H, t, J = 8.8 Hz), 11.05 (1H, brs).

[0211] (Reference example 101)

Production of

6-[2-fluoro-4-(methoxymethyloxy)-3-vinylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.114]

To a mixture of

6-[3-bromo-2-fluoro-4-(methoxymethoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Reference example 100, 4.87 g) in 1,2-dimethoxyethane/water (3 : 1, 32 mL) were added potassium vinyltrifluoroborate (3.78 g), potassium carbonate (4.87 g), and [1,1'-bis(diphenylphosphino)ferrocene]palladium(II) dichloride complex with methylene chloride (1.15 g). Then, the mixture was stirred at 150°C under microwave irradiation for one hour. The reaction mixture was poured into water/ethyl acetate, and then the mixture was filtered through a Celite pad. And, the filtrate was extracted with ethyl acetate. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 80 : 20 to 67 : 33) to afford the title compound as a pale yellow solid (3.01 g).

¹H-NMR (CDCl₃) δ: 1.20 (3H, d, J = 7.1 Hz), 2.43 (1H, dd, J = 16.9, 3.4 Hz), 2.74 (1H, dd, J = 16.9, 6.6 Hz), 3.21-3.33 (1H, m), 3.50 (3H, s), 5.26 (2H, s), 5.54-5.60 (1H, m), 5.98-6.08 (1H, m), 6.81 (1H, dd, J = 18.1, 12.0 Hz), 6.95 (1H, dd, J = 8.8, 1.0 Hz), 7.37 (1H, t, J = 8.8 Hz), 8.60 (1H, brs).

[0212] (Reference example 102)

Production of

6-[3-ethyl-2-fluoro-4-(methoxymethoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.115]

To a mixture of

6-[2-fluoro-4-(methoxymethoxy)-3-vinylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Reference example 101, 292 mg) in ethanol (10 mL) was added platinum-carbon (1 w/w %, 195 mg). The reaction mixture was stirred at room temperature for 4 hours under a hydrogen atmosphere. The reaction mixture was filtered through a Celite pad, and then the filtrate was concentrated to afford the title compound as a white solid (280 mg).

¹H-NMR (CDCl₃) δ: 1.16 (3H, t, J = 7.6 Hz), 1.20 (3H, d, J = 7.3 Hz), 2.42 (1H, dd, J = 16.9, 3.4 Hz), 2.66-2.79 (3H, m), 3.21-3.34 (1H, m), 3.49 (3H, s), 5.24 (2H, s), 6.90 (1H, dd, J = 8.8, 1.0 Hz), 7.33 (1H, t, J = 8.8 Hz), 8.53 (1H, brs).

[0213] (Reference example 103)

Production of

6-(3-ethyl-2-fluoro-4-hydroxyphenyl)-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.116]

To a mixture of

6-[3-ethyl-2-fluoro-4-(methoxymethoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Reference example 102, 280 mg) in ethanol (10 mL) was added 6 M hydrochloric acid (0.476 mL), and then the mixture was stirred at 60°C for 7 hours. To the reaction mixture was added water, and then the mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, and then filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 33 : 67 to 17 : 83) to afford the title compound as a white solid (151 mg).

¹H-NMR (DMSO-d₆) δ: 1.03 (3H, d, J = 7.3 Hz), 1.08 (3H, t, J = 7.3 Hz), 2.20 (1H, dd, J = 16.9, 3.7 Hz), 2.52-2.68 (3H, m), 3.04-3.18 (1H, m), 6.68 (1H, d, J = 8.5 Hz), 7.24 (1H, t, J = 8.8 Hz), 10.09 (1H, brs), 10.87 (1H, brs).

[0214] The following compounds were prepared from each appropriate starting material in a similar manner to Reference example 103.

(Reference example 104)

6-(4-Hydroxy-3,5-dimethylphenyl)-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.117]

¹H-NMR (DMSO-d₆) δ: 1.04 (3H, d, J = 7.3 Hz), 2.19 (6H, s), 2.19 (1H, d, J = 16.7 Hz), 2.61 (1H, dd, J = 16.7, 6.8 Hz), 3.27-3.38 (1H, m), 7.36 (2H, s), 8.59 (1H, s),

10.75 (1H, s).

[0215] (Reference example 105)

6-(2-Fluoro-4-hydroxy-3-vinylphenyl)-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.118]

¹H-NMR (DMSO-d₆) δ: 1.03 (3H, d, J = 7.3 Hz), 2.21 (1H, dd, J = 16.9, 3.7 Hz), 2.64 (1H, dd, J = 16.9, 6.8 Hz), 3.04-3.16 (1H, m), 5.45-5.53 (1H, m), 5.96-6.05 (1H, m), 6.71-6.81 (2H, m), 7.30 (1H, t, J = 8.8 Hz), 10.56 (1H, d, J = 1.2 Hz), 10.91 (1H, s).

[0216] (Reference example 106)

2,2-difluoro-3-[3-fluoro-2-methyl-4-(4-methyl-6-oxo-4,5-dihydro-1H-pyridazin-3-yl)phenoxy]propyl benzoate

[Chem.179]

A mixture of

2,2-difluoro-3-[3-fluoro-2-methyl-4-(4-methyl-6-oxo-4,5-dihydro-1H-pyridazin-3-yl)phenoxy]propyl methanesulfonate (Reference example 135, 324 mg) and sodium benzoate (229 mg) in DMF (4 mL) was stirred at 180°C under microwave irradiation for 30 minutes. To the reaction mixture was added water, and the mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 70 : 30 to 50 : 50) to afford the title compound as a white solid (253 mg).

¹H-NMR (DMSO-d₆) δ: 1.02 (3H, d, J = 7.1 Hz), 2.12 (3H, d, J = 2.2 Hz), 2.23 (1H, dd, J = 16.7, 3.8 Hz), 2.67 (1H, dd, J = 16.7, 6.8 Hz), 3.03-3.19 (1H, m), 4.63 (2H, t, J

= 12.7 Hz), 4.84 (2H, t, J = 13.8 Hz), 7.01 (1H, d, J = 8.8 Hz), 7.40 (1H, t, J = 8.8 Hz), 7.52-7.60 (2H, m), 7.67-7.75 (1H, m), 7.98-8.05 (2H, m), 10.96 (1H, s).

[0277] The following compounds were prepared from each appropriate starting material in a similar manner to Reference example 166.

[0284] (Reference example 174)Production of

(3R)-4-(3-chloro-4-hydroxy-5-methylphenyl)-3-methyl-N-[(1S)-1-(4-nitrophenyl)ethyl]-4-oxobutanamide

[Chem.187]

To a mixture of 4-(3-chloro-4-hydroxy-5-methylphenyl)-3-methyl-4-oxobutanoic acid (Reference example 71, 317 mg) in DMF (10 mL) were added (S)-1-(4-nitrophenyl)ethylamine hydrochloride (275 mg), triethylamine (0.189 mL), 1-hydroxybenzotriazole monohydrate (208 mg), and 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride (260 mg). The reaction mixture was stirred at room temperature for 3 days. To the reaction mixture was added saturated aqueous sodium bicarbonate, and the mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude diastereomer was purified by silica gel column chromatography (heptane : ethyl acetate

= 67 : 33 to 25 : 75) to afford the title compound as a pale yellow amorphous (206 mg).

¹H-NMR (CDCl₃) δ: 1.18 (3H, d, J = 7.1 Hz), 1.44 (3H, d, J = 7.1 Hz), 2.30-2.38 (4H, m), 2.80 (1H, dd, J = 14.9, 9.0 Hz), 3.85-3.97 (1H, m), 5.07 (1H, quintet, J = 7.1 Hz), 5.99 (1H, d, J = 6.8 Hz), 6.08 (1H, s), 7.41-7.48 (2H, m), 7.70 (1H, d, J = 1.5 Hz), 7.85 (1H, d, J = 2.2 Hz), 8.15-8.22 (2H, m).

[0285] (Reference example 175)

Production of

2-{2-chloro-6-methyl-4-[(2R)-2-methyl-3-[[[(1S)-1-(4-nitrophenyl)ethyl]carbamoyl]propanoyl]phenoxy}ethyl 4-bromobenzoate

[Chem.188]

To a mixture of

(3R)-4-(3-chloro-4-hydroxy-5-methylphenyl)-3-methyl-N-[(1S)-1-(4-nitrophenyl)ethyl]-4-oxobutanamide (Reference example 174, 206 mg) in THF (5.0 mL) were added 2-hydroxyethyl 4-bromobenzoate (162 mg) and triphenylphosphine (174 mg), and the mixture was cooled on ice bath. Bis(2-methoxyethyl) azodicarboxylate (155 mg) was slowly added to the reaction mixture, and then the reaction mixture was stirred at room temperature overnight. The solvent was removed, and the obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 67 : 33 to 33 : 67) to afford the title compound as a colorless solid (205 mg).

¹H-NMR (CDCl₃) δ: 1.17 (3H, d, J = 7.3 Hz), 1.45 (3H, d, J = 7.1 Hz), 2.31-2.39 (4H, m), 2.82 (1H, dd, J = 14.9, 9.3 Hz), 3.85-3.96 (1H, m), 4.32-4.38 (2H, m), 4.64-4.70 (2H, m), 5.08 (1H, quintet, J = 7.1 Hz), 5.96 (1H, d, J = 7.1 Hz), 7.41-7.47 (2H, m), 7.57-7.63 (2H, m), 7.71 (1H, d, J = 1.5 Hz), 7.85 (1H, d, J = 2.2 Hz), 7.87-7.93 (2H, m), 8.15-8.21 (2H, m).

[0286] The obtained compound was recrystallized from ethyl acetate/heptane to give a single crystal thereof. According to the X-ray crystal structure analysis of the single crystal, the stereochemistry at the 3rd position of the butanamide moiety thereof was determined as R.

<Crystallographic data>

Composition formula: C₂₉H₂₈BrClN₂O₇, Molecular weight: 631.90, monoclinic

Space group $P2_1(\#4)$, $a = 4.7154(5)\text{\AA}$, $b = 20.026(2)\text{\AA}$, $c = 15.3231(18)\text{\AA}$, $V = 1433.7(3)\text{\AA}^3$, $Z = 2$, $D_c = 1.464\text{ g/cm}^3$, $R\text{-factor} = 0.1308$

[0287] (Reference example 176)

Production of 3-bromo-2-fluoro-4-hydroxy-5-methylbenzaldehyde

[Chem.189]

To a solution of 2-fluoro-4-hydroxy-5-methylbenzaldehyde (3.39 g) in acetic acid (20 mL) was added pyridinium bromide perbromide (8.44 g), and the mixture was stirred at 75°C for one hour. The reaction mixture was allowed to cool to room temperature. To the reaction mixture was added water, and the precipitates were collected on a filter, washed with water, and dried to afford the title compound as a pale brown solid (4.77 g).

$^1\text{H-NMR}$ (DMSO-d_6) δ : 2.25 (3H, s), 7.59 (1H, dd, $J = 8.1, 0.7\text{ Hz}$), 10.02 (1H, s), 10.82 (1H, brs).

[0288] The following compound was prepared from the appropriate starting material in a similar manner to Reference example 28.

(Reference example 177)

2-Fluoro-4-(methoxymethoxy)-3,5-dimethylbenzaldehyde

[0290] (Reference example 179)

Production of 5-chloro-2,4-dihydroxy-3-methylbenzaldehyde

[Chem.192]

To a mixture of 2,4-dihydroxy-3-methylbenzaldehyde (6.09 g) in dichloroethane (80 mL) was added N-chlorosuccinimide (6.41 g), and the mixture was stirred at 60°C for 3 hours. The solvent was removed, and the residue was dissolved in ethyl acetate. The solution was washed with water and brine, dried over anhydrous sodium sulfate, filtrated, and then concentrated. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 95 : 5 to 74 : 26) to afford the title compound as a white solid (6.76 g).

$^1\text{H-NMR}$ (DMSO-d_6) δ : 2.07 (3H, d, $J = 0.6$ Hz), 7.68-7.70 (1H, m), 9.77 (1H, s), 10.52 (1H, brs), 11.36 (1H, s).

[0291] (Reference example 180)

Production of 2,4-bis(benzyloxy)-5-chloro-3-methylbenzaldehyde

[Chem.193]

To a mixture of 5-chloro-2,4-dihydroxy-3-methylbenzaldehyde (Reference example 179, 6.76 g) in DMF (75 mL) were added potassium carbonate (15.0 g) and benzyl bromide (10.8 mL), and the mixture was stirred at room temperature for one hour. To the reaction mixture was added water, and the mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, filtrated, and concentrated. The obtained solid was washed by trituration with diisopropyl ether, and then collected on a filter to afford the title compound as a pale brown solid (11.3 g).

¹H-NMR (DMSO-d₆) δ: 2.20 (3H, d, J = 0.5 Hz), 5.03 (2H, s), 5.05 (2H, s), 7.35-7.55 (10H, m), 7.66-7.67 (1H, m), 9.99 (1H, s).

[0292] The following compound was prepared from the appropriate starting material in a similar manner to Reference example 180.

(Reference example 181)

2,4-Bis(benzyloxy)-3-chloro-5-methylbenzaldehyde

[Chem.194]

¹H-NMR (CDCl₃) δ: 2.25 (3H, d, J = 0.7 Hz), 5.06 (2H, s), 5.14 (2H, s), 7.35-7.53

(10H, m), 7.58 (1H, d, $J = 0.7$ Hz), 10.05 (1H, s).

[0293] (Reference example 182)

Production of 4-benzyloxy-5-chloro-2-hydroxy-3-methylbenzaldehyde

[Chem.195]

To a mixture of 2,4-bis(benzyloxy)-5-chloro-3-methylbenzaldehyde (Reference example 180, 11.33 g) in toluene (140 mL) / diethyl ether (20 mL) was added magnesium bromide (8.53 g). Under an argon atmosphere, the mixture was stirred at 100°C for one hour. The reaction mixture was allowed to cool to room temperature, 1 M hydrochloric acid was added thereto, and then the mixture was extracted with ethyl acetate. The organic layer was washed with brine, dried over anhydrous sodium sulfate, filtrated, and then concentrated. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 95 : 5 to 90 : 10 to 75 : 25) to afford the title compound as a white solid (4.26 g).

$^1\text{H-NMR}$ (CDCl_3) δ : 2.15 (3H, d, $J = 0.5$ Hz), 5.02 (2H, s), 7.34-7.53 (6H, m), 9.77 (1H, s), 11.37 (1H, s).

Production of

6-[3-chloro-4-(2-hydroxy-2-methylpropoxy)-2-(methoxymethoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.225]

A mixture of

6-[3-chloro-4-hydroxy-2-(methoxymethoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Reference example 99, 130 mg), 1-chloro-2-methyl-2-propanol (0.268 mL), and potassium carbonate (241 mg) in ethanol (2.0 mL)/water (0.2 mL) was stirred at 80°C for 7 hours. The reaction mixture was poured into aqueous sodium hydroxide, and the mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, and filtrated. The solvent was

removed to afford the title compound as a colorless oil (130 mg).

$^1\text{H-NMR}$ (CDCl_3) δ : 1.07 (3H, d, $J = 7.3$ Hz), 1.39 (6H, s), 2.42 (1H, dd, $J = 17.0, 4.8$ Hz), 2.80 (1H, dd, $J = 17.0, 7.0$ Hz), 3.30-3.41 (1H, m), 3.53 (3H, s), 3.87 (2H, s), 5.01-5.06 (1H, m), 5.14-5.20 (1H, m), 6.76 (1H, d, $J = 8.5$ Hz), 7.22 (1H, d, $J = 8.5$ Hz), 8.44 (1H, brs).

Production of

6-[4-(3-hydroxypropoxy)-2-(methoxymethyloxy)-3-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.241]

To a mixture of

6-[4-hydroxy-2-(methoxymethyloxy)-3-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Reference example 98, 611 mg), 3-(tert-butyldimethylsilyloxy)propan-1-ol (627 mg), and triphenylphosphine (864 mg) in THF (12 mL) was added bis(2-methoxyethyl) azodicarboxylate (771 mg) at 0°C, and then the mixture was stirred at room temperature overnight. The solvent was removed, and then the residue

was purified by silica gel column chromatography (heptane : ethyl acetate = 85 : 15 to 35 : 65) to afford a pale yellow oil (1.04 g). The oil was dissolved in THF (10 mL), tetrabutylammonium fluoride (1.0 M THF solution, 2.76 mL) was added to the mixture at 0°C, and then the mixture was stirred at room temperature for 2.5 hours. The reaction mixture was concentrated, water was added to the residue, and then the mixture was extracted with ethyl acetate. The organic layer was washed with brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 50 : 50 to 0 : 100) to afford the title compound as a colorless amorphous (635 mg).

¹H-NMR (CDCl₃) δ: 1.06 (3H, d, J = 7.3 Hz), 1.77-1.85 (1H, m), 2.09 (2H, quintet, J = 6.0 Hz), 2.19 (3H, s), 2.41 (1H, dd, J = 17.1, 4.6 Hz), 2.78 (1H, dd, J = 17.1, 7.0 Hz), 3.28-3.37 (1H, m), 3.50 (3H, s), 3.87-3.91 (2H, m), 4.15 (2H, t, J = 6.0 Hz), 4.88 (1H, d, J = 5.6 Hz), 4.98 (1H, d, J = 5.6 Hz), 6.70 (1H, d, J = 8.5 Hz), 7.14 (1H, d, J = 8.5 Hz), 8.56 (1H, brs).

[0340] The following compounds were prepared from each appropriate starting material in a similar manner to Reference example 228.

Production of
3-[2-chloro-3-hydroxy-4-(4-methyl-6-oxo-4,5-dihydro-1H-pyridazin-3-yl)phenoxy]-2,2-difluoropropyl benzoate
[Chem.249]

A suspension of

6-[3-chloro-4-hydroxy-2-(methoxymethoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Reference example 99, 350 mg), 2,2-difluoro-3-(methylsulfonyloxy)propyl methanesulfonate (943 mg), and cesium carbonate (1.53 g) in NMP (2.0 mL) was stirred at 150°C under microwave irradiation for 30 minutes. To the reaction mixture

was added water, and the mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The residue was purified by silica gel column chromatography (heptane : ethyl acetate = 50 : 50 to 0 : 100) to afford a mixture containing the desired intermediate. A solution of the obtained mixture and sodium benzoate (121 mg) in NMP (2.0 mL) was stirred at 180°C under microwave irradiation for 30 minutes. To the reaction mixture was added water, and the mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 67 : 33 to 33 : 67) and then by diol silica gel column chromatography (heptane : ethyl acetate = 75 : 25 to 33 : 67) to afford the title compound as a colorless solid (38 mg).

¹H-NMR (CDCl₃) δ: 1.28 (3H, d, J = 7.3 Hz), 2.53 (1H, d, J = 16.6 Hz), 2.75 (1H, dd, J = 16.6, 6.6 Hz), 3.38-3.43 (1H, m), 4.42 (2H, t, J = 11.2 Hz), 4.48 (2H, t, J = 12.7 Hz), 6.55 (1H, d, J = 9.3 Hz), 7.31 (1H, d, J = 9.3 Hz), 7.41-7.48 (2H, m), 7.55-7.63 (1H, m), 8.00-8.06 (2H, m), 9.10 (1H, s), 12.54 (1H, s).

[0348] (Reference example 237)

Production of 4-benzyloxy-1-bromo-2-fluoro-3-(trifluoromethyl)benzene

[Chem.250]

Under an argon atmosphere, to a mixture of 4-benzyloxy-1-bromo-2-fluorobenzene (6.10 g) in THF (20 mL) was added dropwise lithium diisopropylamide (2.0 M, a mixed solution of THF/heptane/ethylbenzene, 13.6 mL) at -78°C. The reaction mixture was stirred at the same temperature for 30 minutes, and then iodine (6.61 g) was added thereto. The reaction mixture was stirred at -78°C for 1.5 hours. To the reaction mixture was added water, and the mixture was extracted with ethyl acetate. The organic layer was washed with aqueous sodium thiosulfate, saturated aqueous sodium bicarbonate, and then brine, dried over anhydrous sodium sulfate, filtrated, and then concentrated. The residue was purified by silica gel column chromatography (heptane : ethyl acetate = 100 : 0 to 95 : 5 to 91 : 9), and then the obtained solid was washed by

trituration with heptane to afford a white solid (5.12 g). The white solid (5.12 g) was dissolved in NMP (40 mL), and then methyl difluoro(fluorosulfonyl)acetate (12.8 mL) and copper iodide (4.79 g) were added thereto. Under an argon atmosphere, the mixture was stirred at 100°C for 18 hours. The reaction mixture was allowed to cool to room temperature, water and ethyl acetate were added thereto, and then the mixture was filtered through a Celite pad. The separated organic layer was washed with water and brine, dried over anhydrous sodium sulfate, filtrated, and then concentrated. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 100 : 0 to 83 : 17) to afford the title compound as a white solid (3.93 g). ¹H-NMR (CDCl₃) δ: 5.17 (2H, s), 6.74 (1H, d, J = 8.8 Hz), 7.31-7.43 (5H, m), 7.57-7.63 (1H, m).

[0349] The following compound was prepared from the appropriate starting material in a similar manner to Reference example 20.

(Reference example 238)

4-Benzyloxy-2-fluoro-3-(trifluoromethyl)benzaldehyde

[0377] (Example 24)

Production of

6-[3-bromo-2-fluoro-4-(2-hydroxy-2-methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2

H-pyridazin-3-one

[Chem.279]

Under an argon atmosphere, to a solution of 6-[3-bromo-2-fluoro-4-(2-oxopropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Reference example 114, 357 mg) in THF (10 mL) was added dropwise methylmagnesium bromide (3 M diethyl ether solution, 1.0 mL) at 0°C. The reaction mixture was stirred at room temperature for 23 hours. The reaction mixture was cooled at 0°C, aqueous ammonium chloride was added thereto, and the mixture was extracted with ethyl acetate. The organic layer was washed with brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 33 : 67 to 6 : 94). The obtained solid was washed by trituration with diisopropyl ether, and then collected on a filter to afford the title compound as a white solid (18 mg).

¹H-NMR (DMSO-d₆) δ: 1.04 (3H, d, J = 7.3 Hz), 1.25 (6H, s), 2.24 (1H, dd, J = 16.8, 3.7 Hz), 2.69 (1H, dd, J = 16.8, 6.8 Hz), 3.09-3.19 (1H, m), 3.86 (2H, s), 4.70 (1H, s), 7.03 (1H, dd, J = 8.9, 1.2 Hz), 7.57 (1H, t, J = 8.9 Hz), 11.01 (1H, s).

[0378] The following compounds were prepared from each appropriate starting material in a similar manner to Example 24.

(Example 25)6-[3-Chloro-5-fluoro-4-(2-hydroxy-2-methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.280]

¹H-NMR (DMSO-d₆) δ: 1.05 (3H, d, J = 7.3 Hz), 1.25 (6H, s), 2.24 (1H, d, J = 16.7 Hz), 2.69 (1H, dd, J = 16.7, 7.0 Hz), 3.35-3.45 (1H, m), 3.87 (2H, d, J = 1.2 Hz), 4.64 (1H, s), 7.64 (1H, dd, J = 12.7, 2.2 Hz), 7.68 (1H, t, J = 2.2 Hz), 11.06 (1H, s).

[0379] (Example 26)

6-[3-Bromo-5-fluoro-4-(2-hydroxy-2-methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.281]

¹H-NMR (DMSO-d₆) δ: 1.04 (3H, d, J = 7.3 Hz), 1.26 (6H, s), 2.23 (1H, d, J = 16.8 Hz), 2.69 (1H, dd, J = 16.8, 6.9 Hz), 3.34-3.45 (1H, m), 3.86 (2H, d, J = 1.3 Hz), 4.64 (1H, s), 7.67 (1H, dd, J = 12.9, 2.1 Hz), 7.81 (1H, t, J = 2.1 Hz), 11.06 (1H, s).

[0380] (Example 27)

Production of

6-[2,3-difluoro-4-(2-hydroxy-2-methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.282]

A suspension of

6-(2,3-difluoro-4-hydroxyphenyl)-5-methyl-4,5-dihydro-2H-pyridazin-3-one (480 mg), 2,2-dimethyloxirane (0.231 mL), and potassium carbonate (415 mg) in DMF (3 mL) was stirred at 160°C under microwave irradiation for 30 minutes. The reaction mixture was poured into water, and the mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by

silica gel column chromatography (heptane : ethyl acetate = 60 : 40 to 33 : 67). The obtained solid was washed by trituration with diisopropyl ether, and then collected on a filter to afford the title compound as a white solid (326 mg).

¹H-NMR (DMSO-d₆) δ: 1.05 (3H, d, J = 7.3 Hz), 1.21 (6H, s), 2.25 (1H, dd, J = 16.9, 3.4 Hz), 2.70 (1H, dd, J = 16.9, 6.7 Hz), 3.11-3.21 (1H, m), 3.87 (2H, s), 4.71 (1H, s), 7.06-7.13 (1H, m), 7.34-7.41 (1H, m), 11.02 (1H, s).

[0381] The following compounds were prepared from each appropriate starting material in a similar manner to Example 27.

(Example 28)

6-[2-Hydroxy-4-(2-hydroxy-2-methylpropoxy)-3-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[0394] (Example 41)Production of

6-{3-chloro-5-fluoro-4-[(1-hydroxycyclopropyl)methoxy]phenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.296]

To a mixture of methyl 4-{3-chloro-5-fluoro-4-[(1-hydroxycyclopropyl)methoxy]phenyl}-3-methyl-4-oxobutanoate (Reference example 55, 352 mg) in ethanol (10 mL) were added hydrazine monohydrate (0.149 mL) and acetic acid (0.175 mL), and then the mixture was refluxed for 8 hours. Water was added to the reaction mixture, and the mixture was extracted with ethyl acetate. The organic layer was washed with brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 25 : 75 to 0 : 100), and the desired fractions were concentrated. The residue was recrystallized from 2-propanol to afford the title compound as a white solid (91 mg).

¹H-NMR (DMSO-d₆) δ: 0.61-0.73 (4H, m), 1.04 (3H, d, J = 7.3 Hz), 2.23 (1H, d, J = 16.7 Hz), 2.69 (1H, dd, J = 16.7, 7.0 Hz), 3.35-3.46 (1H, m), 4.10 (2H, s), 5.54 (1H, s), 7.63 (1H, dd, J = 12.5, 2.2 Hz), 7.66-7.69 (1H, m), 11.06 (1H, s).

[0395] The following compounds were prepared from each appropriate starting material in a similar manner to Example 41.

(Example 42)

6-{2,3-Difluoro-4-[(1-hydroxycyclopropyl)methoxy]phenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one
[Chem.297]

[0421] (Example 68)Production of

6-[3-bromo-5-chloro-4-(3-hydroxy-2,2-dimethylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.323]

Under an argon atmosphere, to a mixture of methyl 3-[2-bromo-6-chloro-4-(4-methyl-6-oxo-4,5-dihydro-1H-pyridazin-3-yl)phenoxy]-2,2-dimethylpropionate (Reference example 129, 342 mg) in THF (10 mL) was slowly added diisobutylaluminum hydride (1 M n-hexane solution, 3.17 mL) at 0°C. The mixture was stirred at room temperature for 2 hours, hydrochloric acid was added to the reaction mixture, and the mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 50 : 50 to 25 : 75). The obtained solid was recrystallized from 2-propanol to afford the title compound as a white powder (111 mg).

Melting point : 198.0-199.7°C

[0422] The following compounds were prepared from each appropriate starting material in a similar manner to Example 68.

(Example 69)

6-[3-Bromo-5-fluoro-4-(3-hydroxy-2,2-dimethylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.324]

[0427] (Example 74)Production of6-[2-hydroxy-4-(2-hydroxypropoxy)-3-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.329]

To a mixture of

6-[2-(methoxymethoxy)-3-methyl-4-(2-oxopropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Reference example 107, 120 mg) in methanol (2 mL) was added sodium borohydride (27 mg) at 0°C , and the mixture was stirred at room temperature for one hour. The reaction mixture was poured into water, and the mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, and dried over anhydrous sodium sulfate. The solvent was removed and the residue was dissolved in ethanol (2 mL), and hydrogen chloride (2 M ethanol solution, 0.359 mL) was added to the mixture. The reaction mixture was stirred at room temperature for 2 days. The precipitates were collected on a filter to afford the title compound as a pale yellow solid (83 mg).

$^1\text{H-NMR}$ (DMSO- d_6) δ : 1.10 (3H, d, $J = 7.3$ Hz), 1.18 (3H, d, $J = 6.1$ Hz), 2.03 (3H,

s), 2.27 (1H, d, J = 16.9 Hz), 2.76 (1H, dd, J = 16.9, 6.6 Hz), 3.47-3.57 (1H, m), 3.76-3.83 (1H, m), 3.86-3.92 (1H, m), 3.92-4.02 (1H, m), 4.86 (1H, brs), 6.57 (1H, d, J = 9.0 Hz), 7.42 (1H, d, J = 9.0 Hz), 11.03 (1H, s), 12.46 (1H, s).

[0428] The following compound was prepared from the appropriate starting material in a similar manner to Example 74.

(Example 75)

6-[3-Chloro-2-hydroxy-4-(2-hydroxypropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.330]

¹H-NMR (DMSO-d₆) δ: 1.11 (3H, d, J = 7.3 Hz), 1.19 (3H, d, J = 5.9 Hz), 2.26-2.34 (1H, m), 2.80 (1H, dd, J = 16.7, 6.7 Hz), 3.50-3.60 (1H, m), 3.83-3.93 (1H, m), 3.94-4.05 (2H, m), 4.87-4.94 (1H, m), 6.74 (1H, d, J = 9.0 Hz), 7.55 (1H, d, J = 9.0 Hz), 11.13 (1H, s), 13.01 (1H, s).

[0429] (Example 76)

Production of

6-{3-chloro-2-fluoro-4-[(Z)-4-hydroxy-2-butenyloxy]phenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.331]

To a mixture of

6-{4-[(Z)-4-(tert-butyldimethylsilyloxy)-2-butenyloxy]-3-chloro-2-fluorophenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Reference example 144, 296 mg) in THF (5 mL) was added tetrabutylammonium fluoride (1.0 M THF solution, 0.805 mL), and then the mixture was stirred at room temperature overnight. The reaction mixture was con-

centrated, and the obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 10 : 90 to 0 : 100). The obtained solid was washed by trituration with diisopropyl ether, and then collected on a filter to afford the title compound as a white solid (135 mg).

¹H-NMR (DMSO-d₆) δ: 1.04 (3H, d, J = 7.1 Hz), 2.25 (1H, dd, J = 16.9, 3.4 Hz), 2.69 (1H, dd, J = 16.9, 6.8 Hz), 3.09-3.21 (1H, m), 4.11 (2H, t, J = 5.0 Hz), 4.78-4.89 (3H, m), 5.59-5.70 (1H, m), 5.73-5.83 (1H, m), 7.09 (1H, dd, J = 9.0, 1.2 Hz), 7.54 (1H, t, J = 9.0 Hz), 11.03 (1H, s).

[0430] The following compounds were prepared from each appropriate starting material in a similar manner to Example 76.

(Example 77)

6-[3-Chloro-2-hydroxy-4-(3-hydroxypropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[0451] (Example 98)

Production of

6-[3-chloro-4-(4-hydroxy-2,2-dimethylbutoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.353]

To a mixture of

6-(3-chloro-4-hydroxy-5-methylphenyl)-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Reference example 86, 255 mg), 4-(tert-butyltrimethylsilyloxy)-2,2-dimethylbutan-1-ol (258 mg), and triphenylphosphine (291 mg) in THF (10 mL) was added bis(2-methoxyethyl) azodicarboxylate (260 mg) at 0°C , and then the mixture was stirred at room temperature overnight. The solvent was removed, and then the residue was purified by silica gel column chromatography (heptane : ethyl acetate = 50 : 50) to afford a pale yellow solid (165 mg). The obtained solid was dissolved in THF (5 mL). To the solution was added tetrabutylammonium fluoride (1.0 M THF solution, 0.424 mL) at 0°C , and then the solution was stirred at 50°C for 2 hours. To the reaction mixture was added water, and the mixture was extracted with ethyl acetate. The organic layer was washed with brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 50 : 50 to 0 : 100), and the desired fractions were concentrated. The residue was crystallized from diisopropyl ether /ethyl acetate, and the precipitates were collected on a filter to afford the title compound as a white powder (59 mg).

$^1\text{H-NMR}$ (DMSO-d_6) δ : 1.05 (3H, d, $J = 7.3$ Hz), 1.06 (6H, s), 1.60 (2H, t, $J = 7.3$ Hz), 2.22 (1H, d, $J = 16.5$ Hz), 2.31 (3H, s), 2.67 (1H, dd, $J = 16.5, 7.0$ Hz), 3.34-3.42 (1H, m), 3.52-3.59 (2H, m), 3.58 (2H, s), 4.32 (1H, t, $J = 5.0$ Hz), 7.59-7.61 (1H, m),

7.65-7.67 (1H, m), 10.98 (1H, s).

[0452] The following compounds were prepared from each appropriate starting material in a similar manner to Example 98.

(Example 99)

6-[3-Chloro-5-fluoro-4-(4-hydroxy-2,2-dimethylbutoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[0457] (Example 104)Production of

2-fluoro-6-(2-hydroxypropoxy)-3-(4-methyl-6-oxo-4,5-dihydro-1H-pyridazin-3-yl)benzonitrile

[Chem.359]

A mixture of

6-[3-bromo-2-fluoro-4-(2-hydroxypropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Example 48, 180 mg), zinc cyanide (105 mg), and tetrakis(triphenylphosphine)palladium (29 mg) in DMF (2.5 mL) was stirred at 150°C under microwave irradiation for 30 minutes. To the reaction mixture were added ethyl acetate and water, and then the mixture was filtered through a Celite pad. The organic layer was separated, washed with brine, dried with anhydrous sodium sulfate, filtrated, and then concentrated. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 40 : 60 to 0 : 100), and the desired fractions were concentrated. The residue was crystallized from diisopropyl ether. The precipitates were collected on a filter to afford the title compound as a white solid (93 mg).

¹H-NMR (DMSO-d₆) δ: 1.05 (3H, d, J = 7.3 Hz), 1.18 (3H, d, J = 6.2 Hz), 2.26 (1H, dd, J = 16.9, 3.4 Hz), 2.71 (1H, dd, J = 16.9, 6.8 Hz), 3.11-3.22 (1H, m), 3.95-4.14 (3H, m), 4.99 (1H, d, J = 4.8 Hz), 7.21 (1H, d, J = 9.0 Hz), 7.90 (1H, t, J = 9.0 Hz), 11.09 (1H, s).

[0458] The following compound was prepared from the appropriate starting material in a similar manner to Example 104.

(Example 105)

2-Fluoro-6-(2-hydroxy-2-methylpropoxy)-3-(4-methyl-6-oxo-4,5-dihydro-1H-pyridazin-3-yl)benzonitrile

[Chem.360]

¹H-NMR (DMSO-d₆) δ: 1.05 (3H, d, J = 7.1 Hz), 1.23 (6H, s), 2.26 (1H, dd, J = 16.9, 3.4 Hz), 2.71 (1H, dd, J = 16.9, 6.8 Hz), 3.12-3.22 (1H, m), 3.97 (2H, s), 4.77 (1H, s), 7.21 (1H, d, J = 9.0 Hz), 7.90 (1H, t, J = 9.0 Hz), 11.09 (1H, s).

[0459] (Example 106)

Production of

2-fluoro-6-(3-hydroxypropoxy)-3-(4-methyl-6-oxo-4,5-dihydro-1H-pyridazin-3-yl)benzonitrile

[Chem.361]

A mixture of

6-[3-bromo-2-fluoro-4-(3-hydroxypropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Example 12, 150 mg), zinc cyanide (108 mg), and tetrakis(triphenylphosphine)palladium (24 mg) in DMF (1.5 mL) was stirred at 100°C overnight. The reaction mixture was allowed to cool to room temperature, and then tetrakis(triphenylphosphine)palladium (97 mg) was added thereto. The reaction

mixture was stirred at 100°C further for one day. The reaction mixture was allowed to cool to room temperature, water and ethyl acetate were added to the reaction mixture, and then the mixture was filtered through a Celite pad. The organic layer of the filtrate was separated, washed with water and brine, dried with anhydrous sodium sulfate, filtrated, and then concentrated to afford a solid (191 mg). The solid was dissolved in DMF (2.0 mL), imidazole (34 mg) and tert-butyldimethylchlorosilane (69 mg) were added to the mixture, and the mixture was stirred at room temperature overnight. Imidazole (34 mg) and tert-butyldimethylchlorosilane (69 mg) were further added thereto, and the mixture was stirred at room temperature for 30 minutes. To the reaction mixture was added water, and the mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 85 : 15 to 15 : 85) to afford a white solid (45 mg). To a solution of the obtained white solid (45 mg) in THF (1.0 mL) under ice-cold was added tetrabutylammonium fluoride (1.0 M THF solution, 0.16 mL). The mixture was stirred at room temperature for one hour. To the reaction mixture were added water and brine, and the mixture was extracted with ethyl acetate. The organic layer was dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 10 : 90 to 0 : 100 to ethyl acetate : methanol = 90 : 10). The obtained solid was washed by trituration with diisopropyl ether, and then collected on a filter to afford the title compound as a white solid (26 mg).
¹H-NMR (DMSO-d₆) δ: 1.05 (3H, d, J = 7.0 Hz), 1.86-1.96 (2H, m), 2.26 (1H, d, J = 16.9 Hz), 2.70 (1H, dd, J = 16.9, 6.5 Hz), 3.12-3.22 (1H, m), 3.53-3.64 (2H, m), 4.25-4.33 (2H, m), 4.58-4.66 (1H, m), 7.20 (1H, d, J = 8.9 Hz), 7.92 (1H, t, J = 8.9 Hz), 11.09 (1H, s).

[0460] (Example 107)

Production of

6-[4-(2,2-difluoro-3-hydroxypropoxy)-2-fluoro-3-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.362]

To a mixture of 2,2-difluoro-3-[3-fluoro-2-methyl-4-(4-methyl-6-oxo-4,5-dihydro-1H-pyridazin-3-yl)phenoxy]propyl benzoate (Reference example 166, 253 mg) in methanol (2 mL) was added 5 M aqueous sodium hydroxide (0.349 mL), and the mixture was stirred at room temperature for 2 hours. To the reaction mixture was added water, and the mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude solid was recrystallized from heptane/ethyl acetate to afford the title compound as a white solid (117 mg).

¹H-NMR (DMSO-d₆) δ: 1.03 (3H, d, J = 7.1 Hz), 2.11 (3H, d, J = 2.2 Hz), 2.23 (1H, dd, J = 16.7, 3.8 Hz), 2.67 (1H, dd, J = 16.7, 6.7 Hz), 3.06-3.20 (1H, m), 3.71-3.87 (2H, m), 4.39 (2H, t, J = 12.6 Hz), 5.65-5.73 (1H, m), 6.97 (1H, d, J = 8.8 Hz), 7.40 (1H, t, J = 8.8 Hz), 10.95 (1H, s).

[0461] The following compounds were prepared from each appropriate starting material in a similar manner to Example 107.

(Example 108)

6-[4-(2,2-Difluoro-3-hydroxypropoxy)-2,3-difluorophenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.363]

6-[3-Bromo-4-(2,2-difluoro-3-hydroxypropoxy)-2-fluorophenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.367]

¹H-NMR (DMSO-d₆) δ: 1.04 (3H, d, J = 7.1 Hz), 2.25 (1H, dd, J = 16.9, 3.7 Hz), 2.70 (1H, dd, J = 16.9, 6.8 Hz), 3.08-3.21 (1H, m), 3.82 (2H, td, J = 13.8, 6.2 Hz), 4.50 (2H, t, J = 12.3 Hz), 5.70 (1H, t, J = 6.2 Hz), 7.15 (1H, dd, J = 8.8, 1.2 Hz), 7.60 (1H, t, J = 8.8 Hz), 11.04 (1H, s).

[0466] (Example 113)

6-[3-chloro-4-(2,2-difluoro-3-hydroxypropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.368]

¹H-NMR (DMSO-d₆) δ: 1.05 (3H, d, J = 7.3 Hz), 2.23 (1H, d, J = 16.7 Hz), 2.33 (3H, s), 2.68 (1H, dd, J = 16.7, 7.0 Hz), 3.33-3.45 (1H, m), 3.81 (2H, td, J = 13.9, 6.0 Hz), 4.27 (2H, t, J = 13.4 Hz), 5.65 (1H, t, J = 6.0 Hz), 7.62 (1H, d, J = 2.2 Hz), 7.68 (1H, d, J = 2.2 Hz), 11.00 (1H, s).

[0467] (Example 114)

6-[4-(2,2-Difluoro-3-hydroxypropoxy)-2-fluoro-3-vinylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.369]

¹H-NMR (CDCl₃) δ: 1.19 (3H, d, J = 7.1 Hz), 2.13 (1H, t, J = 7.1 Hz), 2.42 (1H, dd, J = 17.1, 3.7 Hz), 2.73 (1H, dd, J = 17.1, 6.8 Hz), 3.20-3.31 (1H, m), 4.00 (2H, td, J = 12.5, 7.1 Hz), 4.34 (2H, t, J = 11.5 Hz), 5.56-5.63 (1H, m), 5.98-6.06 (1H, m), 6.70-6.83 (2H, m), 7.41 (1H, t, J = 8.5 Hz), 8.57 (1H, brs).

[0468] (Example 115)

Production of

6-[4-(2,2-difluoro-3-hydroxypropoxy)-2-hydroxy-3-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.370]

A mixture of

2,2-difluoro-3-[3-(methoxymethoxy)-2-methyl-4-(4-methyl-6-oxo-4,5-dihydro-1H-pyridazin-3-yl)phenoxy]propyl methanesulfonate (Reference example 141, 80 mg) and sodium benzoate (51 mg) in DMF (2 mL) was stirred at 180°C under microwave irradiation for 30 minutes. The reaction mixture was poured into water, and the mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 50 : 50) to afford a colorless oil. The oil was dissolved in ethanol (2 mL), 5 M aqueous sodium hydroxide (0.046 mL) was added thereto, and the mixture was stirred at room temperature for one hour. The mixture was poured into water, and the mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, and dried over anhydrous sodium sulfate, filtrated, and concentrated. The residue was dissolved in ethanol (2 mL), hydrogen chloride (2 M ethanol solution, 0.058 mL) was added thereto, and the mixture was stirred at room temperature overnight. The precipitates were collected on a filter to afford the title compound as a white solid (20 mg).

¹H-NMR (DMSO-d₆) δ: 1.10 (3H, d, J = 7.3 Hz), 2.04 (3H, s), 2.27 (1H, d, J = 16.6 Hz), 2.77 (1H, dd, J = 16.7, 6.7 Hz), 3.47-3.61 (1H, m), 3.73-3.86 (2H, m), 4.35 (2H, t, J = 12.7 Hz), 5.66 (1H, t, J = 6.2 Hz), 6.66 (1H, d, J = 9.0 Hz), 7.46 (1H, d, J = 9.0 Hz), 11.06 (1H, s), 12.54 (1H, s).

[0469] (Example 116)

Production of

(5R)-(-)-6-[3-chloro-4-(2-hydroxyethoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.371]

To a mixture of 2-{2-chloro-6-methyl-4-[(2R)-2-methyl-3-[[[(1S)-1-(4-nitrophenyl)ethyl]carbamoyl]propanoyl]phenoxy}ethyl 4-bromobenzoate (Reference example 175, 300 mg) in 2-propanol (5.0 mL) were added acetic acid (0.272 mL) and hydrazine monohydrate (0.115 mL), and then the mixture was stirred at 60°C overnight. The reaction mixture was concentrated, water was added to the residue, and the mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The residue was purified by silica gel column chromatography (heptane : ethyl acetate = 80 : 20 to 50 : 50). The obtained solid was washed by trituration with ethyl acetate/heptane, and then collected on a filter to afford a colorless solid (168 mg). The solid was dissolved in ethanol (5.0 mL), and 5 M aqueous sodium hydroxide (0.140 mL) was added to the mixture. The mixture was stirred at room temperature for 15 minutes, water was added to the solution, and the mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 25 : 75 to 0 : 100). The obtained solid was recrystallized from ethyl acetate/heptane to afford the title compound as a colorless solid (50 mg, >99% ee). The optical purity was determined by high performance liquid chromatography (HPLC) analysis.

2.3 Hz), 2.19-2.27 (1H, m), 2.21 (3H, s), 2.66 (1H, dd, J = 16.7, 6.7 Hz), 3.06-3.17 (1H, m), 3.58-3.66 (2H, m), 3.85 (2H, t, J = 6.3 Hz), 4.53 (1H, t, J = 5.1 Hz), 7.24 (1H, d, J = 8.9 Hz), 10.96 (1H, s).

[0495] (Example 142)

Production of

6-[3-chloro-4-(3-hydroxy-2-methylpropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.397]

A suspension of

6-(3-chloro-4-hydroxy-5-methylphenyl)-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Reference example 86, 251 mg), 3-hydroxy-2-methylpropyl 4-methylbenzenesulfonate (364 mg), and cesium carbonate (647 mg) in NMP (3.0 mL) was stirred at 150°C under microwave irradiation for 30 minutes. To the reaction mixture was added water, and the mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, and filtrated, and the solvent was removed. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 50 : 50 to 0 : 100 to ethyl acetate : methanol = 90 : 10), and the desired fractions were concentrated. The residue was crystallized from diisopropyl ether/2-propanol to afford the title compound as a white powder (224 mg).

¹H-NMR (DMSO-d₆) δ: 1.03 (3H, d, J = 6.6 Hz), 1.05 (3H, d, J = 6.3 Hz), 2.01-2.07 (1H, m), 2.22 (1H, d, J = 16.7 Hz), 2.31 (3H, s), 2.67 (1H, dd, J = 16.7, 7.0 Hz), 3.35-3.54 (3H, m), 3.72-3.77 (1H, m), 3.85-3.91 (1H, m), 4.56 (1H, t, J = 5.1 Hz), 7.60 (1H, d, J = 2.2 Hz), 7.66 (1H, d, J = 2.2 Hz), 10.99 (1H, s).

[0496] The following compound was prepared from the appropriate starting material in a similar manner to Example 142.

(Example 143)

6-[3-Chloro-4-(3-hydroxybutoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.398]

¹H-NMR (DMSO-d₆) δ: 1.05 (3H, d, J = 7.3 Hz), 1.13 (3H, d, J = 6.1 Hz), 1.74-1.88 (2H, m), 2.23 (1H, d, J = 16.7 Hz), 2.31 (3H, s), 2.67 (1H, dd, J = 16.7, 7.0 Hz), 3.33-3.42 (1H, m), 3.82-4.03 (3H, m), 4.53 (1H, d, J = 4.9 Hz), 7.60 (1H, d, J = 2.2 Hz), 7.66 (1H, d, J = 2.2 Hz), 10.99 (1H, s).

[0497] The following compounds were prepared from each appropriate starting material in a similar manner to Example 98.

(Example 144)

6-(3-Chloro-4-[1-(hydroxymethyl)cyclopropylmethoxy]-5-methylphenyl)-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.399]

¹H-NMR (DMSO-d₆) δ: 0.52-0.55 (4H, m), 1.05 (3H, d, J = 7.3 Hz), 2.22 (1H, d, J = 16.9 Hz), 2.32 (3H, s), 2.67 (1H, dd, J = 16.9, 6.8 Hz), 3.32-3.42 (1H, m), 3.53 (2H, d, J = 5.6 Hz), 3.80 (2H, s), 4.57 (1H, t, J = 5.6 Hz), 7.59 (1H, d, J = 2.2 Hz), 7.64 (1H, d, J = 2.2 Hz), 10.97 (1H, s).

[0498] (Example 145)

6-(2,3-Difluoro-4-[1-(hydroxymethyl)cyclopropylmethoxy]phenyl)-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.400]

¹H-NMR (DMSO-d₆) δ: 0.52-0.54 (4H, m), 1.05 (3H, d, J = 7.1 Hz), 2.24 (1H, dd, J = 16.9, 3.4 Hz), 2.70 (1H, dd, J = 16.9, 6.8 Hz), 3.12-3.20 (1H, m), 3.39 (2H, d, J = 5.6 Hz), 4.03 (2H, s), 4.67 (1H, t, J = 5.6 Hz), 7.04-7.10 (1H, m), 7.37 (1H, td, J = 8.8, 2.2 Hz), 11.02 (1H, s).

[0499] (Example 146)

Production of

6-[3-chloro-2-hydroxy-4-(4-hydroxy-2,2-dimethylbutoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.401]

A mixture of

6-[3-chloro-4-hydroxy-2-(methoxymethoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Reference example 99, 250 mg),

4-(tert-butyldimethylsilyloxy)-2,2-dimethylbutan-1-ol (214 mg), triphenylphosphine (285 mg), and bis(2-methoxyethyl) azodicarboxylate (255 mg) in THF (10 mL) was stirred at room temperature overnight. The solvent was removed, and the residue was purified by silica gel column chromatography (heptane : ethyl acetate = 67 : 33 to 33 : 67) to afford a mixture containing the desired intermediate. To a mixture of the above intermediate in ethanol (2.0 mL) was added hydrogen chloride (2 M ethanol solution, 1.0 mL), and the mixture was stirred at room temperature overnight. The reaction mixture was filtrated, and the filtrate was concentrated, and the obtained solid was washed by trituration with ethyl acetate/heptane to afford the title compound as a colorless solid (28 mg).

¹H-NMR (DMSO-d₆) δ: 1.02 (6H, s), 1.10 (3H, d, J = 7.6 Hz), 1.57 (2H, t, J = 7.6 Hz), 2.29 (1H, d, J = 16.9 Hz), 2.80 (1H, dd, J = 16.9, 6.8 Hz), 3.47-3.60 (3H, m), 3.79 (2H, s), 4.32 (1H, t, J = 4.9 Hz), 6.70 (1H, d, J = 9.0 Hz), 7.55 (1H, d, J = 9.0 Hz), 11.12 (1H, s), 13.00 (1H, s).

[0500] The following compounds were prepared from each appropriate starting material in a similar manner to Example 48.

(Example 147)

6-[5-Chloro-2-fluoro-4-(2-hydroxypropoxy)-3-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.402]

¹H-NMR (DMSO-d₆) δ: 1.04 (3H, d, J = 7.2 Hz), 1.19 (3H, d, J = 6.2 Hz), 2.20-2.29 (4H, m), 2.68 (1H, dd, J = 16.8, 6.8 Hz), 3.08-3.19 (1H, m), 3.74-3.84 (2H, m), 3.94-4.04 (1H, m), 4.90-4.95 (1H, m), 7.51 (1H, d, J = 7.9 Hz), 11.06 (1H, s).

[0501] (Example 148)

6-[3-Chloro-2-fluoro-4-(2-hydroxypropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.403]

¹H-NMR (DMSO-d₆) δ: 1.05 (3H, d, J = 7.2 Hz), 1.19 (3H, d, J = 6.3 Hz), 2.25 (1H, dd, J = 16.8, 3.7 Hz), 2.29 (3H, s), 2.69 (1H, dd, J = 16.8, 6.8 Hz), 3.09-3.20 (1H, m), 3.73-3.86 (2H, m), 3.93-4.05 (1H, m), 4.90 (1H, d, J = 4.9 Hz), 7.43 (1H, d, J = 8.3 Hz), 11.07 (1H, s).

[0502] (Example 149)

6-[3-Chloro-2,5-difluoro-4-(2-hydroxypropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.404]

[0518] (Example 165)Production of

6-(3-bromo-5-chloro-4-[(1-hydroxycyclopropyl)methoxy]phenyl)-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.420]

To a mixture of

6-(3-bromo-5-chloro-4-hydroxyphenyl)-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Reference example 87, 318 mg) and [1-(tetrahydro-2H-pyran-2-yloxy)cyclopropyl]methanol (207 mg) in THF (5.0 mL) were added triphenylphosphine (315 mg) and bis(2-methoxyethyl) azodicarboxylate (281 mg) at 0°C. The reaction mixture was stirred at room temperature for one hour, and then the solvent was removed. The residue was diluted with ethyl acetate, washed with 1 M aqueous sodium hydroxide and then brine, dried over anhydrous sodium sulfate, filtrated, and concentrated. The residue was purified by silica gel column chromatography (heptane : ethyl acetate = 71 : 29 to 50 : 50 to 32 : 68) to afford a colorless amorphous. The amorphous was dissolved in ethanol (5.0 mL), pyridinium *p*-toluenesulfonate (23 mg) was added to the mixture, and the mixture was stirred at 60°C for 30 minutes. The reaction mixture was allowed to cool to room temperature, water was added to the reaction mixture, and the mixture was extracted with ethyl acetate. The organic layer was washed with 1 M aqueous sodium hydroxide and then

brine, dried over anhydrous sodium sulfate, filtrated, and then concentrated. The obtained solid was washed by trituration with diisopropyl ether to afford the title compound as a white solid (282 mg).

¹H-NMR (DMSO-d₆) δ: 0.67-0.78 (4H, m), 1.04 (3H, d, J = 7.3 Hz), 2.23 (1H, d, J = 16.8 Hz), 2.69 (1H, dd, J = 16.8, 6.9 Hz), 3.36-3.46 (1H, m), 3.97-4.03 (2H, m), 5.63 (1H, s), 7.85 (1H, d, J = 2.2 Hz), 7.95 (1H, d, J = 2.2 Hz), 11.08 (1H, s).

[0519] The following compounds were prepared from each appropriate starting material in a similar manner to Example 165.

(Example 166)

6-{2-Hydroxy-4-[(1-hydroxycyclopropyl)methoxy]-3-methylphenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.421]

¹H-NMR (DMSO-d₆) δ: 0.60-0.73 (4H, m), 1.10 (3H, d, J = 7.3 Hz), 2.05 (3H, s), 2.26 (1H, d, J = 16.7 Hz), 2.76 (1H, dd, J = 16.7, 6.7 Hz), 3.47-3.58 (1H, m), 3.96-4.05 (2H, m), 5.55 (1H, s), 6.57 (1H, d, J = 9.0 Hz), 7.41 (1H, d, J = 9.0 Hz), 11.02 (1H, s), 12.45 (1H, s).

[0520] (Example 167)

[0530] (Example 177)

Production of

6-[4-(1,1-difluoro-2-hydroxyethoxy)-2-fluoro-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.432]

To a mixture of

6-(2-fluoro-4-hydroxy-5-methylphenyl)-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Reference example 205, 472 mg) and ethyl bromodifluoroacetate (0.385 mL) in DMF (10 mL) was added potassium carbonate (415 mg) at 0°C. The mixture was gradually warmed to room temperature, and stirred overnight. To the reaction mixture was added water, and the mixture was extracted with ethyl acetate. The organic layer was washed with water and brine, dried over anhydrous sodium sulfate, filtrated, and then concentrated. The residue was purified by silica gel column chromatography (heptane : ethyl acetate = 68 : 32 to 47 : 53 to 40 : 60) to afford a colorless amorphous. The amorphous was dissolved in THF (6.0 mL), and lithium borohydride (44 mg) was added to the mixture at 0°C. The reaction mixture was stirred at room temperature for one hour. To the reaction mixture was added water, and the mixture was extracted with ethyl acetate. The organic layer was washed with brine, dried over anhydrous sodium sulfate, filtrated, and then concentrated. The obtained crude product was purified by silica gel column chromatography (heptane : ethyl acetate = 53 : 47 to 32 : 68 to 29 : 71), and the desired fractions were concentrated. The residue was washed by trituration with diisopropyl ether to afford the title compound as a white solid (44 mg).

¹H-NMR (DMSO-d₆) δ: 1.06 (3H, d, J = 7.2 Hz), 2.21-2.29 (1H, m), 2.22 (3H, s), 2.69 (1H, dd, J = 16.8, 6.8 Hz), 3.11-3.21 (1H, m), 3.85-3.96 (2H, m), 5.94 (1H, t, J = 6.7 Hz), 7.14 (1H, d, J = 11.7 Hz), 7.54 (1H, d, J = 8.5 Hz), 11.06 (1H, s).

[0531] Each absolute configuration of Examples 178 - 183 shown below was extrapolated by comparison with Example 116.

(Example 178)

Production of

(5R)-(-)-6-[2-hydroxy-4-(3-hydroxypropoxy)-3-methylphenyl]-5-methyl-4,5-dihydro-2

H-pyridazin-3-one

[Chem.433]

6-[4-(3-Hydroxypropoxy)-2-(methoxymethoxy)-3-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Reference example 228, 695 mg) was optically-resolved by chiral column chromatography according to the following preparative condition to afford chiral

6-[4-(3-hydroxypropoxy)-2-(methoxymethoxy)-3-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one as a colorless amorphous (322 mg, 99% ee).

<Preparative condition>

Column: Daicel CHIRALFLASH IA (3.0 cmφ x 10 cm)

Eluent: hexane/ethanol = 80/20

Flow rate: 15 ml/min

Detection: UV (254 nm).

<HPLC conditions of optical purity analysis>

Column: Daicel CHIRALPAK IA (0.46 cmφ x 25 cm)

Eluent: hexane/ethanol = 40/60

Flow rate: 1.0 ml/min

Detection: UV (254 nm).

Retention time: 4.7 min

[0543] (Example 184)Production of6-[2-fluoro-4-(2-hydroxy-2-methylpropoxy)-3-(trifluoromethyl)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one

[Chem.439]

To a mixture of

6-[2-fluoro-4-hydroxy-3-(trifluoromethyl)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Reference example 242, 290 mg) in DMF (5.0 mL) were added potassium carbonate (207 mg) and 3-chloro-2-methyl-1-propene (0.117 mL), and then the mixture was stirred at 80°C for one hour. 3-Chloro-2-methyl-1-propene (0.029 mL) was added to the reaction mixture, and then the reaction mixture was stirred at 80°C further for 30 minutes. The reaction mixture was allowed to cool to room temperature, water was added to the reaction mixture, and then the mixture was extracted with ethyl acetate. The organic layer was washed with 1 M aqueous sodium hydroxide and then brine, dried over anhydrous sodium sulfate, filtrated, and then concentrated. The obtained solid was washed by trituration with diisopropyl ether to afford a white solid (276 mg). The white solid (242 mg) was dissolved in methylene chloride (3.5 mL), m-chloroperbenzoic acid (280 mg) was added to the solution at 0°C. The reaction mixture was stirred at room temperature for 3 hours. Aqueous sodium thiosulfate was added to the reaction mixture at 0°C, and the mixture was extracted with ethyl acetate. The organic layer was washed with saturated aqueous sodium bicarbonate and then brine, dried over anhydrous sodium sulfate, filtrated, and then concentrated. The residue was purified by silica gel column chromatography (heptane : ethyl acetate = 47 : 53 to 26 : 74 to 12 : 88), and the obtained solid was washed by trituration with diisopropyl ether to afford a white solid (163 mg). A mixture of the white solid (140 mg), ammonium formate (74 mg), and palladium-carbon (10 % w/w, 14 mg) in ethanol (7.0 mL) was allowed to be under a hydrogen atmosphere, and the mixture was stirred at room temperature for 3 hours. The mixture was filtered through a Celite pad, and the filtrate was concentrated. The residual solid was washed by trituration with diisopropyl ether, and then collected on a filter to afford the title compound as a white solid (108 mg).

¹H-NMR (DMSO-d₆) δ: 1.03 (3H, d, J = 7.2 Hz), 1.21 (6H, s), 2.25 (1H, dd, J =

16.8, 4.2 Hz), 2.69 (1H, dd, $J = 16.8, 6.7$ Hz), 3.06-3.17 (1H, m), 3.88 (2H, s), 4.72 (1H, s), 7.17 (1H, d, $J = 9.0$ Hz), 7.76-7.83 (1H, m), 11.05 (1H, s).

[0544] (Test)

The growth inhibitory activity against human childhood brain tumor cell lines (PFSK-1) was measured with WST-8 reagent [2-(2-methoxy-4-nitrophenyl)-3-(4-nitrophenyl)-5-(2,4-disulfophenyl)-2H-tetrazolium monosodium salt, Cell Counting Kit-8™], according to the method described in Tominaga, H. et al., Anal. Commun., 1999, 36, 47-50. Briefly, PFSK-1 was seeded in 96-well microplate at 100 μ L/well with Roswell Park Memorial Institute (RPMI) 1640 medium containing 10 % fetal bovine serum (FBS), and the cells were incubated in the presence of 5 % carbon dioxide (CO₂) at 37°C for 24 hours. 50 μ L of each test compound diluted with the medium was added to each well, and then the cells were incubated further for 3 days. After the incubation, 15 μ L of Cell Counting Kit-8™ was added to each well, and the cells were incubated for one and half hours. Then, optical density (OD) values at measurement wavelength 450 nm and reference wavelength 630 nm were measured and the difference thereof was calculated. From the calculated difference, the OD value difference (at measurement wavelength 450 nm and reference wavelength 630 nm) of the control well which includes no cell was subtracted to afford cell-growth activity in each well.

The cell growth inhibitory activity of each test compound was calculated by comparing the cell-growth activity with each test compound to the cell-growth activity without any test compound (control), and each IC₅₀ (nM) which is the concentration inhibiting 50 % of the cell growth was calculated. The results are shown in the table below.

Example	IC50 (nM)	Example	IC50 (nM)	Example	IC50 (nM)	Example	IC50 (nM)
1	1.1	2	1.0	6	3.8	7	1.0

Claims

1. A compound of formula (1):

[Chem. 1]

or a pharmaceutically acceptable salt thereof
wherein

R¹ to R⁴ are independently hydrogen atom, halogen, OH, CN, C₁₋₆ alkyl group, halogenated C₁₋₆ alkyl group, C₂₋₆ alkenyl group, C₁₋₆ alkoxy group, or halogenated C₁₋₆ alkoxy group, provided that one or two of R¹ to R⁴ are hydrogen atoms, but it is not that all of three or four thereof are hydrogen atoms, and

Y is C₁₋₆ alkylene or C₂₋₆ alkenylene group, wherein the alkylene or alkenylene group may be substituted with one or more substituents selected independently from the group consisting of C₁₋₆ alkyl group, halogen, and halogenated C₁₋₆ alkyl group, further wherein a substitutable carbon atom in the substituent bonding to the alkylene or alkenylene group and another substitutable carbon atom in the alkylene or alkenylene group, or two substitutable carbon atoms in the substituent bonding to the alkylene or alkenylene group may be combined together to form a 3- to 6-membered carbon ring.

2. The compound of claim 1 or a pharmaceutically acceptable salt thereof, wherein any two of R¹ to R⁴ are hydrogen atoms.

3. The compound of claim 1 or a pharmaceutically acceptable salt thereof, wherein R¹ to R⁴ are independently hydrogen atom, halogen, OH, CN, C₁₋₄ alkyl group, halogenated C₁₋₄ alkyl group, C₂₋₄ alkenyl group, C₁₋₄ alkoxy group, or halogenated C₁₋₄ alkoxy group.

4. The compound of claim 1 or a pharmaceutically acceptable salt thereof, wherein R^1 to R^4 are independently hydrogen atom, fluorine atom, chlorine atom, OH, CN, C_{1-4} alkyl group, vinyl group, or C_{1-4} alkoxy group.

5 5. The compound of claim 1 or a pharmaceutically acceptable salt thereof, wherein the alkylene or alkenylene group in Y is substituted with one or more substituents selected independently from the group consisting of C_{1-4} alkyl group, halogen, and halogenated C_{1-4} alkyl group, further wherein a substitutable carbon atom in the substituent bonding to the alkylene or alkenylene group and another substitutable carbon atom in the alkylene or alkenylene group, or two substitutable carbon atoms in the substituent bonding to the alkylene or alkenylene group may be combined together to form a 3- to 6-membered carbon ring.

6. The compound of claim 1 or a pharmaceutically acceptable salt thereof, wherein a carbon atom of the alkylene or alkenylene group in Y is substituted with one or two substituents selected independently from the group consisting of C_{1-4} alkyl group and halogenated C_{1-4} alkyl group, further when the carbon atom is substituted with two substituents, each substitutable carbon atom in the two substituents may be combined together to form a 3- to 6-membered carbon ring.

20

7. The compound of claim 1 or a pharmaceutically acceptable salt thereof, wherein the alkylene or alkenylene group in Y has no substituent.

8. The compound of claim 1 or a pharmaceutically acceptable salt thereof, wherein the compound of formula (1) is represented in the following formula:

[Chem. 2]

9. The compound of claim 1 or a pharmaceutically acceptable salt thereof, which is selected from the following compounds:

Example 1: 6-[3-bromo-5-chloro-4-(2-hydroxy-2-methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 2: 6-[3,5-dichloro-4-(2-hydroxy-2-methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 7: 6-[3-chloro-5-fluoro-4-(3-hydroxy-2,2-dimethylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 12: 6-[3-bromo-2-fluoro-4-(3-hydroxypropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 19: 6-[3-chloro-2-fluoro-4-(3-hydroxypropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 22: 6-[3-chloro-2-fluoro-4-(3-hydroxypropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 24: 6-[3-bromo-2-fluoro-4-(2-hydroxy-2-methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 26: 6-[3-bromo-5-fluoro-4-(2-hydroxy-2-methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 31: 6-[3-chloro-4-(2-hydroxy-2-methylpropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 36: 6-[3-chloro-2-fluoro-4-(2-hydroxy-2-methylpropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 40: 6-{3-chloro-4-[(2R)-2-hydroxypropoxy]-5-methylphenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 44: 6-{3-chloro-4-[(1-hydroxycyclopropyl)methoxy]-5-methylphenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 46: 6-{2-fluoro-4-[(1-hydroxycyclopropyl)methoxy]-3-methylphenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 47: 6-{3-chloro-2-fluoro-4-[(1-hydroxycyclopropyl)methoxy]phenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 48: 6-[3-bromo-2-fluoro-4-(2-hydroxypropoxy)phenyl]-5-methyl-4,5-

dihydro-2H-pyridazin-3-one,

Example 53: 6-[3,5-dichloro-4-(2-hydroxypropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 54: 6-[3-chloro-2-fluoro-4-(2-hydroxypropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 55: 6-[3-chloro-4-(2-hydroxypropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 57: 6-[3-bromo-5-chloro-4-(2-hydroxypropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 59: 6-[2-fluoro-4-(2-hydroxypropoxy)-3-vinylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 64: 6-[3-chloro-2-fluoro-4-(2-hydroxybutoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 69: 6-[3-bromo-5-fluoro-4-(3-hydroxy-2,2-dimethylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 72: 6-[3-chloro-4-(3-hydroxy-2,2-dimethylpropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 99: 6-[3-chloro-5-fluoro-4-(4-hydroxy-2,2-dimethylbutoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 100: 6-[3,5-dichloro-4-(4-hydroxy-2,2-dimethylbutoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 104: 2-fluoro-6-(2-hydroxypropyl)-3-(4-methyl-6-oxo-4,5-dihydro-1H-pyridazin-3-yl)benzonitrile,

Example 109: 6-[3,5-dichloro-4-(2,2-difluoro-3-hydroxypropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 112: 6-[3-bromo-4-(2,2-difluoro-3-hydroxypropoxy)-2-fluorophenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 113: 6-[3-chloro-4-(2,2-difluoro-3-hydroxypropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 118: (5R)-(-)-6-[3-chloro-2-fluoro-4-(2-hydroxy-2-methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 120: (5R)-(-)-6-[4-(2,2-difluoro-3-hydroxypropoxy)-2-fluoro-3-

methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 124: (5R)-(-)-6-[2,3-difluoro-4-(2-hydroxy-2-methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 125: (5R)-(-)-6-[3-fluoro-4-(3-hydroxy-2,2-dimethylpropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 127: (5R)-(-)-6-[3-bromo-5-chloro-4-(3-hydroxy-2,2-dimethylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 131: 6-[3-chloro-2,5-difluoro-4-(2-hydroxy-2-methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 137: 6-[3-chloro-2-fluoro-4-(3-hydroxy-2,2-dimethylpropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 140: 6-[3-chloro-2,5-difluoro-4-(3-hydroxypropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 142: 6-[3-chloro-4-(3-hydroxy-2-methylpropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 148: 6-[3-chloro-2-fluoro-4-(2-hydroxypropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 151: 6-{3-chloro-2-fluoro-4-[(Z)-4-hydroxy-2-butenyloxy]-5-methylphenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 155: 6-(3-chloro-4-[(1S*,2R*)-2-(hydroxymethyl)cyclopropyl]methoxy)-5-methylphenyl)-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 159: 6-[3-chloro-4-(2,2-difluoro-3-hydroxypropoxy)-2-fluoro-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 160: 6-[4-(2,2-difluoro-3-hydroxypropoxy)-2-fluoro-3,5-dimethylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 167: 6-{3-chloro-2-fluoro-4-[(1-hydroxycyclopropyl)methoxy]-5-methylphenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 168: 6-{3-bromo-2-fluoro-4-[(1-hydroxycyclopropyl)methoxy]phenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 170: 6-{3,5-dichloro-4-[(1-hydroxycyclopropyl)methoxy]phenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 175: 6-{3-chloro-2-hydroxy-4-[(1-hydroxycyclopropyl)methoxy]-5-methylphenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one,

Example 179: (5R)-(-)-6-[2-hydroxy-4-(2-hydroxy-2-methylpropoxy)-3-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one, and

5 Example 184: 6-[2-fluoro-4-(2-hydroxy-2-methylpropoxy)-3-(trifluoromethyl)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one.

10 10. A pharmaceutical composition, comprising the compound of claim 1 or a pharmaceutically acceptable salt thereof.

11. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is 6-[3-bromo-5-chloro-4-(2-hydroxy-2-methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one.

15 12. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is a pharmaceutically acceptable salt of 6-[3-bromo-5-chloro-4-(2-hydroxy-2-methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Example 1).

20 13. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is 6-[3-bromo-2-fluoro-4-(3-hydroxypropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one.

25 14. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is a pharmaceutically acceptable salt of 6-[3-bromo-2-fluoro-4-(3-hydroxypropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Example 12).

15. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is 6-[3-bromo-2-fluoro-4-(2-hydroxy-2-methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one.

30

16. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is a pharmaceutically acceptable salt of 6-[3-bromo-2-fluoro-4-(2-hydroxy-2-

methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Example 24).

17. The compound of claim 9 or a pharmaceutically acceptable salt thereof,
which is 6-[3-chloro-2-fluoro-4-(2-hydroxy-2-methylpropoxy)-5-methylphenyl]-5-
5 methyl-4,5-dihydro-2H-pyridazin-3-one.

18. The compound of claim 9 or a pharmaceutically acceptable salt thereof,
which is a pharmaceutically acceptable salt of 6-[3-chloro-2-fluoro-4-(2-hydroxy-2-
methylpropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Example
10 36).

19. The compound of claim 9 or a pharmaceutically acceptable salt thereof,
which is 6-{3-chloro-4-[(2R)-2-hydroxypropoxy]-5-methylphenyl}-5-methyl-4,5-
dihydro-2H-pyridazin-3-one.
15

20. The compound of claim 9 or a pharmaceutically acceptable salt thereof,
which is a pharmaceutically acceptable salt of 6-{3-chloro-4-[(2R)-2-hydroxypropoxy]-
5-methylphenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Example 40).

20 21. The compound of claim 9 or a pharmaceutically acceptable salt thereof,
which is 6-{3-chloro-4-[(1-hydroxycyclopropyl)methoxy]-5-methylphenyl}-5-methyl-
4,5-dihydro-2H-pyridazin-3-one.

22. The compound of claim 9 or a pharmaceutically acceptable salt thereof,
25 which is a pharmaceutically acceptable salt of 6-{3-chloro-4-[(1-
hydroxycyclopropyl)methoxy]-5-methylphenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-
one (Example 44).

23. The compound of claim 9 or a pharmaceutically acceptable salt thereof,
30 which is 6-{2-fluoro-4-[(1-hydroxycyclopropyl)methoxy]-3-methylphenyl}-5-methyl-
4,5-dihydro-2H-pyridazin-3-one.

24. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is a pharmaceutically acceptable salt of 6-{2-fluoro-4-[(1-hydroxycyclopropyl)methoxy]-3-methylphenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Example 46).

5

25. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is 6-[3-chloro-4-(2-hydroxypropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one.

10

26. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is a pharmaceutically acceptable salt of 6-[3-chloro-4-(2-hydroxypropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Example 55).

15

27. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is 6-[2-fluoro-4-(2-hydroxypropoxy)-3-vinylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one.

20

28. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is a pharmaceutically acceptable salt of 6-[2-fluoro-4-(2-hydroxypropoxy)-3-vinylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Example 59).

25

29. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is 6-[3-chloro-2-fluoro-4-(2-hydroxybutoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one.

30

30. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is a pharmaceutically acceptable salt of 6-[3-chloro-2-fluoro-4-(2-hydroxybutoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Example 64).

30

31. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is 6-[3,5-dichloro-4-(4-hydroxy-2,2-dimethylbutoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one.

32. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is a pharmaceutically acceptable salt of 6-[3,5-dichloro-4-(4-hydroxy-2,2-dimethylbutoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Example 100).

5

33. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is 2-fluoro-6-(2-hydroxypropyl)-3-(4-methyl-6-oxo-4,5-dihydro-1H-pyridazin-3-yl)benzonitrile.

10

34. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is a pharmaceutically acceptable salt of 2-fluoro-6-(2-hydroxypropyl)-3-(4-methyl-6-oxo-4,5-dihydro-1H-pyridazin-3-yl)benzonitrile (Example 104).

15

35. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is 6-[3-chloro-4-(2,2-difluoro-3-hydroxypropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one.

20

36. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is a pharmaceutically acceptable salt of 6-[3-chloro-4-(2,2-difluoro-3-hydroxypropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Example 113).

25

37. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is (5R)-(-)-6-[3-chloro-2-fluoro-4-(2-hydroxy-2-methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one.

30

38. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is a pharmaceutically acceptable salt of (5R)-(-)-6-[3-chloro-2-fluoro-4-(2-hydroxy-2-methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Example 118).

39. The compound of claim 9 or a pharmaceutically acceptable salt thereof,

which is (5R)-(-)-6-[2,3-difluoro-4-(2-hydroxy-2-methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one.

40. The compound of claim 9 or a pharmaceutically acceptable salt thereof,
5 which is a pharmaceutically acceptable salt of (5R)-(-)-6-[2,3-difluoro-4-(2-hydroxy-2-methylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Example 124).

41. The compound of claim 9 or a pharmaceutically acceptable salt thereof,
which is (5R)-(-)-6-[3-bromo-5-chloro-4-(3-hydroxy-2,2-dimethylpropoxy)phenyl]-5-
10 methyl-4,5-dihydro-2H-pyridazin-3-one.

42. The compound of claim 9 or a pharmaceutically acceptable salt thereof,
which is a pharmaceutically acceptable salt of (5R)-(-)-6-[3-bromo-5-chloro-4-(3-
hydroxy-2,2-dimethylpropoxy)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one
15 (Example 127).

43. The compound of claim 9 or a pharmaceutically acceptable salt thereof,
which is 6-[3-chloro-2-fluoro-4-(3-hydroxy-2,2-dimethylpropoxy)-5-methylphenyl]-5-
methyl-4,5-dihydro-2H-pyridazin-3-one.
20

44. The compound of claim 9 or a pharmaceutically acceptable salt thereof,
which is a pharmaceutically acceptable salt of 6-[3-chloro-2-fluoro-4-(3-hydroxy-2,2-
dimethylpropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one
(Example 137).
25

45. The compound of claim 9 or a pharmaceutically acceptable salt thereof,
which is 6-[3-chloro-2-fluoro-4-(2-hydroxypropoxy)-5-methylphenyl]-5-methyl-4,5-
dihydro-2H-pyridazin-3-one.

46. The compound of claim 9 or a pharmaceutically acceptable salt thereof,
which is a pharmaceutically acceptable salt of 6-[3-chloro-2-fluoro-4-(2-
hydroxypropoxy)-5-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Example
30

148).

47. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is 6-{3-chloro-2-fluoro-4-[(Z)-4-hydroxy-2-butenyloxy]-5-methylphenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one.

48. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is a pharmaceutically acceptable salt of 6-{3-chloro-2-fluoro-4-[(Z)-4-hydroxy-2-butenyloxy]-5-methylphenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Example 151).

49. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is 6-[4-(2,2-difluoro-3-hydroxypropoxy)-2-fluoro-3,5-dimethylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one.

50. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is a pharmaceutically acceptable salt of 6-[4-(2,2-difluoro-3-hydroxypropoxy)-2-fluoro-3,5-dimethylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Example 160).

51. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is 6-{3-bromo-2-fluoro-4-[(1-hydroxycyclopropyl)methoxy]phenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one.

52. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is a pharmaceutically acceptable salt of 6-{3-bromo-2-fluoro-4-[(1-hydroxycyclopropyl)methoxy]phenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Example 168).

53. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is 6-{3-chloro-2-hydroxy-4-[(1-hydroxycyclopropyl)methoxy]-5-methylphenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one.

54. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is a pharmaceutically acceptable salt of 6-{3-chloro-2-hydroxy-4-[(1-hydroxycyclopropyl)methoxy]-5-methylphenyl}-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Example 175).

5

55. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is (5R)-(-)-6-[2-hydroxy-4-(2-hydroxy-2-methylpropoxy)-3-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one.

10

56. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is a pharmaceutically acceptable salt of (5R)-(-)-6-[2-hydroxy-4-(2-hydroxy-2-methylpropoxy)-3-methylphenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Example 179).

15

57. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is 6-[2-fluoro-4-(2-hydroxy-2-methylpropoxy)-3-(trifluoromethyl)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one.

20

58. The compound of claim 9 or a pharmaceutically acceptable salt thereof, which is a pharmaceutically acceptable salt of 6-[2-fluoro-4-(2-hydroxy-2-methylpropoxy)-3-(trifluoromethyl)phenyl]-5-methyl-4,5-dihydro-2H-pyridazin-3-one (Example 184).
