

OBJECT DISPLAY FRAME, DATA PROCESSING METHOD, DEVICE, EQUIPMENT AND SYSTEM

ABSTRACT

5 Provided are a display frame for displaying objects, and an object processing method,
device, apparatus, and system. An object displayed in the display frame can be touched when
locked in the display frame. The display frame includes: one or more locking mechanisms,
where one or more objects are arranged on each of the one or more locking mechanisms, the
objects arranged on the locking mechanisms are locked in the display frame when the locking
mechanisms are closed, and the objects arranged on the locking mechanisms are disengaged
10 from the display frame when the locking mechanisms are opened; and a communication
module respectively connected to the one or more locking mechanisms and configured to
receive an unlocking signal to control opening and closing of one of the locking mechanisms.
