

ABSTRACT

Provided in the present disclosure are an image processing method and apparatus, and a device and a storage medium. The method comprises: when a preset recognition operation triggered for a photographing picture on a photographing page is received, determining, on the basis of the photographing picture on the photographing page, a target image which has an image definition that meets a preset definition condition; and then sending the target image to an image recognition serving end to perform recognition on the target image. It can be seen that, by means of the image processing method provided in the embodiments of the present disclosure, a target image, which has an image definition that meets a preset definition condition, can be determined first before image recognition is performed, such that an image recognition serving end can perform recognition on the basis of the target image which has the image definition that meets the condition, thereby improving the accuracy of image recognition.
