(54) Title: SYSTEM AND METHOD FOR AUTOMATING A PROCESS OF BUSINESS DECISION AND WORKFLOW

162162

(57) Abstract: A system and method for automating a business procedure is disclosed. The workflow management system comprises an administrator, a process designer, a workflow database, a process engine and a web client. The system also interacts with a form generator and a business application program. The system first analyzed the business process and models the process as a combination of detailed activities. The system assigns the properties to each activity according to the business rules. After modeling the business process, the process engine allocates the workitems to the participant once the process is initiated. The system can automate a very complicated business process and can be expanded and adapted to the ever-changing business environments.
