

ABSTRACT OF THE DISCLOSURE

TITLE OF INVENTION: WATCH CASE CAPABLE OF RECEIVING A CHOICE
OF TWO DIALS OF DIFFERENT SIZES

The watch-case is capable of receiving a choice of first (9) or second (10) dials of different sizes. To this end, the middle part of the case (1) has first (7) and second (8) annular shoulders arranged in tiers so that, when assembly operations are carried out, one or other of the dials can be selected. If a small dial (9) is selected, a small watch-glass (11) is preferably mounted, said watch-glass being surrounded by a fixed or rotatable bezel (13).

Figures 1 and 2 should accompany the abstract when published.
