

ABSTRACT**SYSTEM AND METHOD FOR PROVIDING HOSPITALITY PRODUCTS**

The invention provides a system for providing hospitality products, comprising at least one device of a customer of a hospitality establishment, and a server cluster that is provided by and/or provided to the hospitality establishment. The server cluster receives one or more instructions from the device, for facilitation of provision of at least one product selected by the customer thereto them, by election of one provider of the selected product filtered from a plurality thereof. A corresponding method is further described.
