

ABSTRACT

LIQUID MATERIAL DISCHARGE APPARATUS

Provided is a liquid material discharge apparatus whereby attachment/detachment of a liquid contact part (2) and a main body part (15) can be more safely and easily performed. A liquid material discharge device provided with: a liquid contact part (2) provided with a housing (6) including a nozzle (3) and a discharge member (5), and a storage container (4) fluidly connected to the housing (6) via an attachment member; a holder (19) to which the housing (6) is detachably mounted; and a main body part (15) having a drive part (6) for actuating the discharge member (5) detachably joined thereto; wherein the liquid material discharge device is further provided with a movable member (12) for moving in an up-down direction along the housing (6) in a state of remaining mounted to the housing (6), and the discharge member (5) and the drive part (6) are made detachable by the moving of the movable member (12) in the up-down direction.
