(54) Title: INTEGRATION OF ONLINE SELF-BOOKING TOOL AND THIRD PARTY SYSTEM SEARCH RESULTS

FIG. 1

(57) **Abstract:** Methods, systems, and computer program products for providing functionality of an online self-booking tool to a user who is booking travel offerings through a website of a third party provider. A travel-related search query by the user generates parallel searches in each of a website of a third party provider and a database including travel offerings having negotiated rates. The results of the parallel searches may be captured and combined in a data siphon tool. The data siphon tool may reconcile the combined search results by eliminating duplicate search results and identifying search results that are in conflict with corporate travel policies. The reconciled search results may then be formatted based on display data obtained from the third party website and displayed to the user. Search results conflicting with corporate travel policies may be deleted, or displayed with an indication of the conflict.
